Stealing toilet paper? Man, what is this world coming to? Speaking of Dayton, how was it? I've never been there yet (maybe some day). Used to always hear hams on 2 meters talking of their adventures. Haven't heard a peep on radio thus far, but it helps if one flips the power button to "on".

So - someone asks an intelligent question, cross-posting because (perhaps) he's at his wits end.

Then you slam him with a fake newsgroup and spout off with your sarcasm and unwillingness to keep your mouth shut if you don't have anything useful or decent to say.

THEN, Mr. x@x.net, you give the most utterly ridiculous HORSE SH*T after your "signature" (which you weren't man enough to list), listing "Morons", TO WHICH GROUP YOU CLEARLY BELONG TO.

YOU'RE THE MORON!! YOU CROSS-POSTED TO THE SAME GROUPS JOHN DID.

My 10-year-old kid has more brains and 'Internet sense' than you show. You ARE atleast 10-years of age, aren't you. You don't sound like it. I'd say, maybe, six or seven.

And I'll bet you sniff girl's bicycle seats in the summertime, don't you?!!

>Just as another person on this group suggested, post some current
>pictures of your house there in Sat. Beach with all those antennas and
>you're claims of your "3 dozen" antennas will be proven. Pretty simple.

My sig block has already appeared in this string of message three or four times, even quoted by some of your friends. The wording of my sig block that lists my equipment has never changed since its inception, except for the addition of new items:

Here it is from message 1 of this message string (and as quoted by your close friends):
AL STERN Satellite Beach FL using
SCANNERS: Three Pro2042s, three Pro2035s, seven Pro2045s, one Pro2036, one Pro2040, two Pro2048s, one Pro2049, two Pro2050s, four Pro2006s, one Pro2005, one Pro2004, one Pro2003, two Pro2002s, three Pro2009s, two Pro2032s, two Pro2022s, two Pro2021s, one Pro2026s, one Pro2023, one Pro2024, one Pro2027, one Pro508, one Pro55, one Pro57. Two BC780s, one BC800XLT, one BC760, one BC590XLT, two BC-250s, three BC210XLTs, two BC350As, one BC450A, one BC700A, two BCT-7s, one BC-310A, one BC-155, one BC-175XL, one BC-178XL, one Fox BMP 10/60.
HANDHELDS: One Sony ICF-SC1, one BC2500XLT, four BC200XLTs, three Pro43s, two Pro26s, one Pro60, one Pro62, one Pro64, one Pro90, one Pro46, one Pro28, three Pro39s, two Pro34s, one SC150 Sportcat and more.
ANTENNAS: About three dozen, including NilJon HD WB Omni, two Max Systems Ground Planes (cut to 225MHz), Scantennas, Grove Beams, Discones, Radio Shack 20-042 Omnis (like Scantennas), two Informant mag-mount whips, Larsen PO 150 whip, Cushcraft Commercial grade FM beam, etc, many on my 45-foot Rohn tower; and Radio Shack center-loaded whips and Bearcat AT002 window-mount antennas for handhelds. Also ample use of in-line amplifiers.
HF GEAR: One Icom R75, three DX-394s, three DX-390s, two DX-398s, one DX-440, one Yaesu FRG-7, one SW-100, MFJ-1020A Active Antenna, H-800 Skymatch LF/MF/HF Active Antenna, Super Vak-Tenna Active Antenna, many indoor/outdoor wires.

Evidentally you are not disputing the rest of the gear. . . just the antennas, huh? You don't think I have 3 dozen antennas? What the hell is three dozen antennas? It is not as if I said I had 36 antennas up on my tower; now that would be a feat. Antennas are cheap: Magmounts are $25 at Radio Shack, Scantennas were $65-75 (I don't even remember), Grove Beams cost peanuts, $80 maybe?. Hell I must have 15-20 Radio Shack center loaded whips alone. NilJon ground planes were't cheap and I guess I have a few of them. My problem, like everybody's is tower space, not antenna quantity. You can only get so many on a tower before the wind load kills you here in FL. Poles in the ground are OK, but you cannot get the height you want.
For the life of me I cannot figure out why you guys think it is such a big deal to have 36 antennas. I think the scanner collection I have is far more

challenging.

AL STERN Satellite Beach FL

What is a "police scanner"? All of my scanners receive much more than
just police. For example, baby monitors! Try learning what a scanner
radio is before you lecture others about posting. By the way, this
group is rec.radio.scanner, not rec.radio.POLICEscanner.

Given that, I also can't see why someone would need a "secure"
monitor.

Hey asshole this is a free country. I'll keep my mouth shut when you or someone else kills me dead you leftist piece of shit.

His shit was off-topic and I made that very clear to every group he cross-posted just to make sure it got back to at least one of the groups he monitors.

Jesus Christ you pricks talkin' all that bullshit about "Shut up." Don't like what I have to say? Then kill file my posts. Simple as that moron.

Welcome to the list.

How 'bout from me?
Your vocabulary indicates your level of intelligence, so I'll speak slowly
and in small words to help you understand.
The OP was asking about baby monitors that can be used without worrying
about some snoop using a scanner to listen in. It is a valid concern
because, even though it is unlikely, it's possible that someone like YOU
may live in their neighborhood.

BTW. I've looked at your sig. Why aren't you listed in it?

The reason one is needed is because a baby monitor is essentially a
broadcast station of all conversations within a room or two of the baby's
room.

I know. I'm a General Class Ham and former scanner enthusiast.

Because a baby monitor are designed to be very sensitive.

Most are basically low-powered broadcast stations. It's the equivalent of an open mike on an entire household for the neighborhood for as long as the baby is a baby.

Thank you.

Now, you're a ham. Can you explain in technical terms what is Fisher-Price's marketing lingo of "coded scrambling system?"

Is it a secure spread-spectrum, or, more likely for an el-cheapo monitor, some random frequency inversion system or even worse, the FRS-type "codes" that only serve to make the receiver not respond to a different unit's signals, but the transmitter is still essentially broadcasting in the clea?

Which means, if the frequency(s) are in State documents, they are
also a matter
of record for the FCC since the FCC had to issue the frequency in
the
first place.
Sounds like a bunch of State Senators with nothing else to do.
I'm
sure the Mafia
used scanners extensively during the big years in Vegas and
probably
still do.

I recently got a 2.4 GHz "Digital Spread Spectrum" multi-phone cordless setup that offers a room monitor function. While it's considerably more money (base unit + 1 handset costs $179), it may serve your needs. Chances are that when using it in room monitor mode, it doesn't operate as a phone, but since I haven't used the feature at all (nor intend to), I can't be sure. It is a Panasonic KX-TG2730. I bought it from the local Radio Shack so that I could return it if I didn't like it. Turns out it is really a nice system, but with a built-in answering machine and a bunch of small-business-oriented phone features, it is clearly overkill. Maybe Panasonic has a scaled-down version with the room monitor feature but without the answering machine, etc.

Assuming you have already searched the Web for a secure baby monitor, I'm sort of surprised there isn't already such a product. Anyway, there are possible alternatives like the Panasonic phone if your budget will allow.

- Doug

P.S. Sorry I didn't post a profane, smart-ass and/or insulting response to your question. I seem to be bucking the trend...

Well George it is not

"generally known to most people how to convert from KHz to MHz and
where the decimal point should go when programming an HF freq."

To a 15 year old kid who just bought his first scanner. Someone just
getting into scanning would have no idea, thats why we told him to ask you
about it, and the information is on your web-site so you would have the
answer :-)

"Its generally known to most people how to convert from KHz to MHz and
where the decimal point should go when programming an HF freq."

Only to guys that have been into HAM or Scanning for some time not to the
newbie.. But now he knows whats up..

> other questions or remarks?

Well, even though you seem to have a keen interest in my anus, I must
inform you that I am not homo/bisexual as you obviously are. Sorry!
Not that there's anything wrong with that ;)

Suffice to say that your IQ matches your vocabulary. Instead of
stating facts and allowing your argument to stand or fall on it's own
merits, you choose to resort to cursing someone out. Sad, but also
very typical of someone with your level of intelligence.

Let me try and explain it so even YOU can understand. Baby monitors
emit a radio frequency. These emissions can be heard on scanner
radios, as can railroads, fire departments, road crews, etc, etc, etc.
Calling them "police scanners" is somewhat of a misnomer then,
although quite common.

This group is alt.radio.scanner. Anything in any way related to
scanners should then be welcomed, not ridiculed as you choose to do.

There are two reasons why you do this. One, you are just not bright
enough to understand facts. Or two, your pathetic existence has
reached the level at which the only way you feel any self-worth is to
try and run down others. You try, but as is always the case, you
failed. That must be very hard to take.

You must feel a sense of power knowing you can act in such a callous
way and not have to look the person right in the eye. But I must ask,
how long does the rush last? How long before you get the inevitable
letdown and are forced back into your pitiful reality?

Perhaps now you will put me on your moron list. I would welcome it
and wear like a badge of honor! If your life is given substance by a
meaningless list of people who put you in your place, then by all
means bring it on. Unfortunately for humanity, you are not a person
of substance. I look you right in the eye and I see you for who you
really are. Past all the swearing, bravado, and belligerence. This

is what you turn out to be: nothing

I will not continue this discussion any longer. You will surely play the part of petulant child, as it most suits you. How sad, but also a little funny. Like seeing a guy piss his pants and not even know it. Such is the life of "The moron list".

Peace out,
MNKid

Got this story link from strongsignals.net

Monday, May 19, 2003 Posted: 10:09 PM EDT (0209 GMT)
LONDON, England (Reuters) -- Instead of landing instructions, aircraft approaching Britain's Luton airport heard the squealing of tiny infant Freya Spratley broadcast over their radios.

Authorities worked 12 hours to track the frequency and determined that a baby monitor at mother Lisa Spratley's house, located near the airport, was broadcasting her baby's cries to the cockpits of approaching planes, the BBC reported on Monday.

more: http://www.cnn.com/2003/WORLD/europe/05/19/offbeat.baby.airport.reut/index.html

Never know what you'll hear next on your radio. Hey "The moron list",aka Opy, right up your alley, eh ;)

Message-ID: <3ED75ED4.2090806@licensed4fun.com>
Source record: 30593

Sorry for not posting any logs for yesterday. Was in and out of the house too much yesterday to actually log what I heard.

I did setup my computer to record the audio. From about 9AM until 6PM the VOX recorder recorded about 2 hours of continuous audio. Iï¿½m playing this audio in a continuous loop on my website. If you go to www.MilAirComms.com, under the Live Audio heading youï¿½ll see the link ï¿½Click Here to Start Broadcastï¿½. This is a great chance for those who havenï¿½t experienced hearing actual military air operations to hear what its all about.

The input to the computer comes from a 4 input Audio Mixer. Typically I have 12-14 scanners running at one time however only send the 4 most interesting to the Audio Mixer. At times you may hear multiple transmissions, this simply is two scanners active at the same time.

I have no idea. I was simply trying to help, rather than jumping down your throat.

The item is described as:

"Special scrambling system blocks outside listeners to assure that you -- and only you -- are monitoring your child and your home."

To me this means that it's not tone controlled, as any scanner ignores this. It might be audio inversion or ?. This item is discontinued and difficult to find. Its the only baby monitor that is scrambled in any way, so it your only choice.

If you're so worried about it, why don't you just hang a mike in the babies room, and string a really long wire to where you want to listen (make sure it's shielded cable). Radio shack makes a small amplified speaker (277-1008 $12) that accepts 1/8" input.

That's really wierd that a device that operates from a couple of AA batteries,
or maybe a 9v at such low power on either 49mhz or 900mhz can interfere in the
120mhz range. Plus the fact that the device is located inside a house and the
antennas on these things are probably not tuned for optimum performance.

With Nextel, wouldn't matter. A lot of Police use them now days. To my knowledge, can't be received on scanners. So, if their Nextels are working ok, they're as good as their 2 ways to do a raid or what ever. I agree with the part about the FCC. Matter of fact, you can look most anything up on their web site. So, the legislators ought to rethink their wasted game plan. If any of them ever got together to do something good for a change, just think how good we could all have it. And to think, they're paid by US, to do this. Talk about a waste of tax payers money! L.

I looked at the link, and judging from the antennas, it would appear
these are 49MhZ units. If that is so, it is unlikely they are spread
spectrum or digital spread spectrum. More likely they are speech
inversion units which are fairly easy to descramble.

>quite a few years?

I haven't seen one. Be warned that the Fisher Price unit only
discourages casual scanner enthusiasts. It's not complete protection
against someone who really wants to listen in.

The "coding technique" (it's really just a modulation trick) is really
just audio inversion. In other words, high tones are low tones and
vice versa. It can be defeated with very simple sound card software.
If someone is interested in the goings on in your nursery, they can
find out.

Speaking as a daddy to be (for the third time) and an electrical
engineer, the only time I use those silly baby monitors is when the
baby's napping inside while I'm busy at the other end of the house, or
outside. Frankly, if someone wants to listen to that, I don't care.
The baby monitor is off otherwise.

I believe the relevant text is on pages 6 and 7. I'm not sure this is
what you seem to think it is.

It prohibits Utilities and Public Safety agencies from distributing
terrorism threat analyses (except to those who need it). It doesn't
prohibit distribution of frequency lists by third parties.

Please explain why you think this legislation is dangerous.

Ahhh.. Upon further examination it would appear that you are right. The
limitations set forth in the bill applies only to:

"A document, record or other item of information described in subsection 2
that is prepared and maintained for the purpose of preventing or responding
to an act of terrorism "

So as long as you don't get your frequencies from "The Nevada State
Government Guide to Preventing and Responding to Terrorist Acts" ;-) you
should be fine.

Breathing a sigh of relief over here, thanks.

Yes it is, clod. Anyone who buys a copy of Police Call can read about MHz
and KHz in the Listener's guide. Someone just getting into scanning would
most likely get their 1st scanner from RS, and would most likely have bought
this book also.

> To a 15 year old kid who just bought his first scanner. Someone just
> getting into scanning would have no idea,

So what's your excuse? How come YOU didn't answer his question?

Answer: Because you're a clod.

Yes. believe it......some hams are SO F-CKING CHEAP
that they will steal toilet paper at the hamfests. I've seen
it at Shelby NC. Dayton was a washout. Rained all
weekend, outside tailgaters left on saturday and whoever
was left had obscenly high prices for radios. One guy
wanted $300 for a 20 year old Tempo 2020 HF rig.
Ha Ha Ha! good luck finding a sucker for that "sweet
deal" - he should have tried e-Bay, more suckers and
shill-bid auctions per mouse click than you'll ever find!
As fo us, this is/was the LAST YEAR we will ever goto
Dayton. It's too damm expensive and too much of a
hassle to get into and out of the Hara Arena. No fun.

As one other has pointed out .. you're best bet may be a hard wired
intercom system .. or something similar .. like a mike/amp in the baby's
room and multiple speakers spread thru-out the house. It only needs to be
one way.

OR .. how about the intercoms that instead of hard wire work over the
power lines? That way you could move the receiver to different rooms easily.

It's not so strange as you might think. All sorts of nasties can get
dumped on the transmitter end. It only takes one stream of errant
urine (most parents have at least one "war story" like this) to damage
a unit. Trash a power supply decoupling cap or two and before you
know, it could be spewing the signal and its harmonics in to a sizable
antenna: the household electrical system.

On the other end, aircraft operate line of sight. Even though most
radios use maybe ten watts of transmitter power (on AM no less) it's
normal to hear other aircraft two hundred miles away. The main
limitation is the earth's curvature.

I think those systems need Phase 3 wiring, which is typically used in commercial buildings
and some
newer buildings. Read about it here: http://homedoctor.net/tipsfaq/2.4.html

I also saw a diagram of a 3-phase circuit box, and that thing looked really big and
complex. I think
there's something about 3 wires and that if you don't use 3-phase equipment with the
outlet, you are
only utilizing one of the three wires and the other two can be used as intercom conduits.

If you want a secure monitor, put in hard wired one.

I don't see what the big deal about a secure baby monitor would be..... I
sure wouldn't listen long.

I must agree with "MechCD" that any radio system regardless of frequency can be monitored, decoded, listened to and recorded. Therefore any radio system by its nature is insecure and the only way to be confident of security is to have a point to point hard wired system.

I also agree - it's very reasonable question!

Considering the mass of Godamn troll crap I've had to put up with lately,
I'm happy to see any legitimate question. I can't provide an answer, but I
don't think such a product exists. I don't recall seeing any ads or magazine
articles on a HF baby monitor, but I might be mistaken.

Thanks for your question
Mike T

We could also do with out a page long sig.

Baby monitors can be a real problem if you operate 6-meters, or 440
for some of the newer ones.

I have 2 new in box, Radio Shack Pro-2067 Scanners for sale. One unit does not have the manual, but it is on RS online. Units are otherwise complete and unused with box and all included accessories, asking $150 each..

Good suggestion, the AC-type intercoms. Radio Shack had "FM Wireless Intercoms" on sale not too long ago for $36 a pair. Careful - max distance is 150 feet on these. You can eat that up real quick in a home of medium size, then the signal strength fizzles out.

They use standard household wiring, 2-prong, hot and neutral with polarized plug, same as an indoor lamp. One note, they drive the low voltage, halogen lamps crazy. I moved my intercom off the same circuit as the track lighting, then all was fine.

Steve

I'm not sure what's available now, but I have an "old" intercom system
that used the house wiring for the signal. Actually they worked any
where on the feed from the AC coming into the house and were far more
reliable (and caused less interferrence) than the today's wireless
devices.

Just plain old 110 AC (single phase) connectors. I think it was a 3
or 4 station unit and you could select the station, or run all 4 open.
I still have two stations out in the garage, but my current shop is on
a different feed from the house.

It worked very well. I used to put one out in the garage to listen
for people pulling in the driveway as I spent a lot of time working

down in the ham shack. (did sales and service back then)

The thing was so sensitive, that when I first put it out there I kept
running upstairs to find out who, or what was int he driveway. You
could hear some one waliking nigh on to a block away (gravel road)

You might find something similar, but being simple it has probably
been replaced by something more complex. that doesn't work as good.

>I also saw a diagram of a 3-phase circuit box, and that thing looked really big and
complex. I think

These you just plug into the AC ... no other wires, or antennas.

I am taking my bike from SF to LA at the end of next month and I am
wondering how I can charge my cell phone and scanner.
Is there a cheap 12v solar cell? Is there a 12v generator that would
run off my wheel?

If you want a really good one, you can check with any local mobile radio shop, such as supplies equipment to police, fire and commercial radio users. I got a used 10 watt GE amplified speaker for $20. They even put a plug on it for me at that price. The speaker has a volume control on it and is about 4 by 8 inches and sounds much better than the radio shack ones.

Would probably not be all that difficult to do. The Nextel I-Den
system uses a variant of IS-136 TDMA. I don't think it is even
encrypted. If you can listen to a D-AMPS mobile phone conversation,you
can probably also listen to a Nextel call.

I can't remember the name of the software I had. I don't have it
anymore.
It was shareware and had some bugs but it worked. There is other
software
for it out there somewhere, I just don't know where. Your radio
would need
a small modification - addition of a discriminator which is a 5
minute soldering
job. Do a search on MDT or Mobile Data Terminals. There is also
a
website
out there catering to this type of monitoring and the last I
checked,
they will
also modify your radio for you for a fee, and they also sell add
on
discriminators
which are rather expensive. If I get hooked into a link, I'll
post
it here. I've
been through many crashes since I first had it running and the
friend
that set me
up died. Maybe some of the experienced listeners and HAM's here
will
know where
to look also.

Radio Shack sells a solar panel intended to keep your car battery charged when you leave the car parked for long periods of time. If you have the cigarette lighter plug charger for your scanner and phone it should be able to charge 'em up one at a time as it only puts out a few tenths of an amp. The panel is about 8 inches by 14 inches and 1 inch thick. Similar panels are available in some auto parts and accessories stores. You'll probably end up paying $30-$40 for a good one. You'll need to get a cigarette lighter socket. IMHO the best way to get the socket would be to spring for a $4 cigarette lighter extension cord and cut the male plug off the extension and wire it to the cord on the panel. Total weight = about 1lb.

No, they make secure digital spread spectrum phones.

Why can't they make baby monitors?

Thanks.

I don't trust Panasonic any more.

Didn't they have a unit that was supposed to be secure, but transmitted in the clear in one direction while being SS in the other?

Funny, I can't find a single posting on "police scanners" - whatever they may be - by the Moron or anyone else on alt.radio.scanner. And none of the manuals or advertising for the, multiple, scanners I own seem to include the words "police scanners."

I have, however, noted in the past that visitors with absolutely no knowledge of scanners, or any radio technology for that matter, almost invariably refer the the boxes on my desk as "police scanners" so maybe that tells us where 'the Moron' fits in the heirarchy.

I await a carefully reasoned reply!!

Dave

Thanks,
I have lots of new cigarette plugs female so that will be fine. I'll look around next week and see what the best out put is I can find, I'll put it on my rear top bag.
My CD player runs three days on two penlight batteries. and the little radio runs a few days on two little batteries and I could pack the Grundig F200 for nights.
I think I'll be able to communicate Ok. I may even have my sat phone by then.

Now that you have heard from all the morons, the answer is no there is no secure baby monitor because there is no need to have one. They are only good for 50 to 250 feet and the cost would take your $19.95 monitor to $59.95.. I don't no of anyone who would want to set up all night listening to a scanner just to hear your kid yelling. So no need = product, simple :-)

I don't know if you've already thought of this, but...

Maybe instead of looking for a product marketed specifically as a baby monitor, you might find something produced for surveillance work or something. You might be able to find some sort of digital hardware marketed for another purpose that would require more security than a baby monitor normally would. I didn't do any google searches or anything to see what might turn up, but it could be a possible lead.

Keep us posted on what you find!

> Baby monitors
> emit a radio frequency.

That can be recieved by a scanner radio. Now if the guy's question was, "I know you people can here what comes through my baby monitor through your scanners. How do I eliminate this problem?" that might be a on-topic question for this group. But in it's original context it is not. A baby monitor is not a scanner and even though you can't get it through your moronic head that it is not a scanner, doesn't make it a scanner.

> Anything in any way related to
> scanners should then be welcomed

Did you see him say, "Hey guys, I got a scanner and I noticed I can hear my baby monitor on it. That seems like a privacy issue. What can I do?" I didn't see that and I know you didn't. It was an off-topic question that didn't have anything to do with scanners, but with baby monitors. Again, a baby monitor is not a scanner.

Also go fuck yourself in your faggot ass with your whore wife/girlfriends dildo. Don't like what I say in this or any other group? Kill file me. It's that simple.

i did a search and came up with something that might have been it called
hamcomm? its no longer supported but they suggest skysweeper, has any one
used this program and know if it can be used to decode the mdt's? seems like
it decodes alot of other modes

(list skipped).

I've avoided responding to your flames, but I do have one question.

If "...it's all been equally moronic," on what basis do you rank them "...
in order of highest to lowest stupidity?"

Thanks.

I've thought of that, including even the 2.4 ghz camera/sound models.

But I still can't find anything secure.

When I lived in a townhouse we listened to the neighbors, don't know where, talking all the time. He was begging for some loving.......... BTW, this monitoring device was our baby monitor!

The 2.4 Ghz sound/camera systems are NOT secure either. There are
scanners that can intercept that also.

What in hell are you talking about? This is a VHF amateur radio newsgroup, not a scanner newsgroup. The monitor's pertinence to ham radio is that it can be picked up by a 6 meter transceiver; it will also be wiped out by somebody close by transmitting on 6 meters. What are your call letters?

Then all that's left is maybe getting a sophisticated spread spectrum phone system with an intercom.

I was the one who originally brought this into this newsgroup, figuring it
was peripherally related to spread spectrum (though that might be better
placed in a newsgroup dealing with famous dead female Hollywood actresses!).

I'll try to make sure that my followups exclude the ham newsgroups from now
on this subject.

John,

I didn't see anything wrong with your posting. Just the moron reply. BTW, I am picking up somebody's monitor S9 on my ICOM 756. It broadcasts in the clear on FM, at about 49.990. They have it on all day, and you can hear conversations on it if you tune just off the end of the 6 meter band. I have a 50 MHz antenna with a 20 foot boom; so, they could be 500 -1000 feet away.

1377. Gov’t Federal Freq Search Turns up a Hit.

Newsgroup: rec.radio.scanner
Date: 2003-05-31 17:30:46 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3ED8E6C6.3010403@licensed4fun.com>
Source record: 30408

Put a scanner in search mode between 162 and 174 MHz to see if I get lucky. Right off the bat got a hit on 164.8250 MHz NFM. Didnï¿½t catch any unit numbers or callsigns. However they were working a case at ï¿½Four Lakesï¿½ or ï¿½Forest Lakesï¿½. It was a weak signal but readable here in Daytona Beach.

About 15 minutes later on the same freq ï¿½Engine 4ï¿½ was heard at coming up to the intersection of Rt 19 and Rt 40. That would but the engine in about the middle of the Ocala National Forest. This second transmission sound much different from the first. So I donï¿½t know if in our area itï¿½s being used by others than the Forest Service or not but based on the last transmission it does sound like a Forestry Service freq.

One listing I found for this freq appears this might be a nation wide freq used by the US Postal Inspectors, as well as the US Forestry Service.

Another freq found during my search was 163.2375. This sounded like a repeater output. Only caught tail end of conversation, something about heï¿½ll be leaving the McDermit PD soon. Weak signal on the ScanTenna, hard to make out the actual name of the PD, it was Mc-something. And not it wasnï¿½t McDonalds ? After doing an internet seach on this freq I was able to find the following at http://www.ntia.doc.gov/osmhome/LRSP/LRSP5a.htm ï¿½ ï¿½Non-Military LMR. This is the primary band for many Federal (non-military) fixed and land mobile operations essential to maintain Federal government's infrastructure-related functions. It is used extensively throughout the United States in support of safety in the air; safety at sea; protection of life, property, and national resources; research; and promotion of efficiency and economy of Federal government operations.ï¿½.

So for those looking for something different to listen to or interested in Federial freqs thereï¿½s something to get you startedï¿½ï¿½ If you have any other info on these freqs or their use in our area please share it with the group. Sharing is what makes the hobby more fun for all!

1378. Flight Test in Progress on 123.5750

Newsgroup: rec.radio.scanner
Date: 2003-05-31 17:53:16 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3ED8EC0C.2080308@licensed4fun.com>
Source record: 30409

Somewhere in W-157 (Atlantic Warning area off GA coast) some Aircraft flight test is in progress. Two planes are up on 123.5750 doing testing at various altitudes from 1500ï¿½ to 45,000ï¿½. Donï¿½t know if theyï¿½re doing actual aircraft tests or radar testing as they were discussing radars earlier today.

So you want to hear something different from traffic stops and drug arrests plug in 123.5750 MHz and if you live in North/Central FL or GA you should be able to hearï¿½..

They could be much further than that... I've had ranges of up to a half
mile in some instances. And that was without the help of both the height
and tuned (somewhat) antenna you have.

George posted:

> I know its not in the FASCFAX Jax Ops manual, I have a copy and have read
> it cover to cover.
> However I know what I heard, my ears to lie.

What do you mean "My ears to lie" ?? Sounds like a Freudian slip. In a
moment of stress, George Fetter blurted out the truth !

> Also, I guess Larry look closer at the logging on MilCom because on
> 11/27/02, 3/19/03, and 3/20/03 I had posted logs which I had
> labeled 316.3000 as a SEALORD Discrete. On these three dates no one
> informed me that it was a NORAD freq. Nor did you (Larry) at that time say
> anything as well.

George, you posted some crap; you labelled a freq incorrectly and no one
corrected you. That does not convert the freq to the incorrect usage you posted
though. It is still incorrect information.
If you treated experts like Larry and Mac nicer and did not argue when people
correct your errors you might get more people to correct you when you post
incorrectly. A simple "Thank you" would have been more appropriate to Larry
and Mac for their corrections. Are there ANY of the respected veteran Milcom
monitors whom you will believe?

> However Larry is wrong in his following statement ï¿½nor has it ever been
> reported on this newsgroup as a discrete in the years since I started this
> listï¿½. Because it has on at least the three dates I just mentioned.

But, they were all YOUR postings. You are the only one who keeps trying to
reassign the NORAD freqs to the FL-ANG sqdn.

> It blows my mind when I sitting here looking at my scanner, seeing the
> frequency, and hearing a FANG callsign coming from my speak then be told
> ï¿½No way. FL-ANG FANGs are F-15s incapable of VHF.ï¿½ï¿½..Allan, did you ever
> learn then what it was I was hearing????

As I reported then and repeated to you recently, and multiple other scannists
in this area confirmed, it was a STING F-16, using a freq consistent with
F-16s, not a FL-ANG F-15 with a borrowed radio and a purloined freq.

> Also Mac on 10/10/02 reported the following logging ï¿½316.300 SNAKE (F-15A,
> 125th FS); ACM in W-areasï¿½. No, he didnï¿½t say it was a Sealord discrete
> however he did say pretty much what I did, it was being used by FANGS
> and/or SNAKES in the Sealord warning area.

Read your OWN words, here, "he didn't say it was a Sealord discrete." That is
the point. It was a NORAD freq being used by a FL-ANG, and engaged in air-air

comms on it. That happens every day, has been happening every day since the FL-ANG was assigned as a NORAD SEADS unit. They operate on NORAD freqs and have every right to engage in air-air talk on them. You should not condemn Mac for recognizing this. Seems to me you even recognized that "he didn't say it was a Sealord discrete." End of story; why argue with your own statement?

Allan, you just don't stop do you? 24+ hours without a post on this subject
I thought it was an ended issue. But you still have to keep pushing don't you.

First I never said any neg. things about Mac. I was simply pointing out the fact that Larry was incorrect in his statement. I also provided the dates of postings in order to show Larry was in deed incorrect in his statement.

I have respect for Mac as he has earned it. Mac will take the time to help newer persons in the hobby. Larry on the other hand has not earned my respect.

A simply "thank you" or "sorry for missing those prior posts" from Larry would have been more appropriate than you're continued harping on a dead issue.

Admit it, Larry jumped the gun without researching the MilCom archives. By doing so Larry made it appear that I incorrectly identified the frequncy. When in fact the original source of my identifiecation for the frequency came came from the group Larry Admins! And Allan, you too made an error, you stated " But, they were all YOUR postings". That too is incorrect. On 5/7/02 Mac posted to Milcom the following: "316.300 FANG a2a" I also pointed this out to Larry via private email. If you need you can download the entire archive from www.qth.net under the MilCom group. Download it because its in there!

So in summary Mac did the same thing I did, nothing more, nothing less. However you accuse me of trying to reassign a NORAD frq to FANGs or SEALORD. IN FACT IT WAS MACS POST OF 5/7/02 which help me get my first identification of the frequency!!!!

Ok, thanks.

It's really scary. At VHF high frequencies, someone could probably rotate a
directional antenna and pick up a 900 or 2.4 signal for miles.

1386. Transport Security Freq active in P25 mode.

Newsgroup: rec.radio.scanner
Date: 2003-05-31 19:18:55 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3ED9001F.40800@licensed4fun.com>
Source record: 30416

In my continued searching in the Fed Bands I found 172.9000 to be active. Low and behold it was in APCO-25 digital mode. With the Uniden 785& Digital card it will automatically detect P-25 mode and decoded it regardless if its one frequency or part of a trunk system. Thatï¿½s one nice thing about the Uniden.

After searching the net, I found several references to 172.9000 being used by TSA for Airport Security. The audio quality wasnï¿½t good so Iï¿½ll have to play with the digital cards audio parmeters as it appears the TSAï¿½s system is different from Unidens Defaults. But non-the-less still interestingï¿½

I know you want me to stop, but as I told you here a few messages ago, you have bullied the last person here. You have lied about me, you have threatened me and others with exposure via Web searches for personal information. I am not afraid, you see. You chased away others from confronting you when your web searches showed some minor flaws in their record, like the minor tax situation of a person. Merely because he disagreed with you. Can't bully me out of the way tho, can you. Last week you threatened me:
1. You are going to post "The Real Al Stern Story" on your website.
2. You are going to sue me for making statements that you do not really make $5000 a week on Ebay as your Sig Block states.
Didn't work tho, did it. You are through bullying people George. I am not afraid of you, and my standing up to you will show others that they do not have to fear your threats.
The newbies you are managing to cluster around you will soon realize that you yourself are a newbie. Here among the newbies who do not know better, you pretend to be an expert. But on Milcom, and on other Email groups where there are people like Larry VanHorn, Mac McCormick, and a host of other knowledgable Military monitors, you ask newbie questions.
You want me to stop here because I am exposing you, not with lies, but with your own words.

A suggestion which was offered to me was to get an RF modulator. Feed the scanner audio into the modulator and it will broadcast on your FM car stereo. Just like the cassette unit. I only offer this suggestion incase your car doesn't have a cassette player, I just got a 2003 F-150 4x4 and even the load models (which is why I have-complete with power moon/sun roof) now come with CD players instead of cassette players.

Currently however I use the RadioShack 4" unamplified speaker. They do a great job even from a handled.....

Just another option....

I had heard that scanners that pick up the digital transmissions
were years away. RS employee said that this one by Uniden picks
up all digital transmissions as well as analog.

Anyone have any experience with this one? Does it really?

(I would rather hear the word of the experts in this newsgroups before
putting that kind of money down at the cash register...)

Well lets see I don't need one but I have heard people making out over
them, don't know who they are as the signal from them travels quit far,
but I can tell you that a few ladies within say 10 blocks of me are
really screamers.

I have two of the BC 785D's and yes they work. I'm monitoring the Florida State Wide Digtal system, Kennedy Space Center 400 MHz Astro Digital System, and the TSA (Transportation Security Admin.) airport security 172.9 MHz frequency.

However there are a few things about this scanner I do not like as well as the BC 780's (non digital scanner). Hear's a post I recently make when I first got my 785's:

I just got 2 BC 785's today. Since there isn't much milair activity in the evening I'm doing some comparing in the Civil Air band (108-136MHz).

First test didn't do very well. Example, on the 780's I can receive the ground side of a Tower on 120.300MHz that's located about 30 miles away. This would be Sanford Tower for those in the area. On the 785's I can't hear the tower even with squelch wide open.

This test involved using the same antenna feeding 2 785's and 1 780 via a Stridesberg Active multicoupler so I know its not a difference in antennas. Tried a few other air freqs with similar disappointing results.

Since making the above post I had equally disappointing results in the MilAir bands. However it was suggested that I might have been experienceing local FM overload. So I bought a Stridsberg FM-Notch filter which did help, even so the 785's still didn't perform as well as 780's in the bands of most interest to me. But in general its an ok scanner.

My suggestion to anyone thinking about the 785 is to decide for yourself if you need Digital. If you don't have digital systems in your area then I would purchase something different (ie: 780 which is about the best MilAir scanner you can purchase and is also great for trunking and convential scanning).

Which model was the bad Panasonic phone that was supposed to be SS but turned out to be that only one way, and analog in the clear the other?

I think it was a few years ago.

Is it still true for any models today?

Anyone know?

Antenna Head

You might want to try a Motorola AMPLIFIED speaker. I bought a used one on eBay for $20. It came out of a police car and you know
how loud they can crank them up!

Well, I liked it so much decided to buy another. Now there's one in the truck and one in the house. I bought the Motorola model
#NSN6048A. It's about 5" x 5" x 2-1/2". Uses 12v and it can get L-O-U-D!

Vic

I've been looking at that, too. I hear the Pro-95 is on sale which is why they happen to be the same price currently. One big difference is that the Pro-95 has a computer interface and the Pro-94 does not.

You must give Allan credit for something, he can "spin" a story like no other. Allan, what did you do before you retired? With your story spinning ability you should have been a politician.

You said you are not a show off when accused by another poster here. If you are not a show off then why in the hell is your sig line 7 freaking lines long?

I've seen your website, its ONE page! One page only! Georges website is more informative. There might be an error here and there, but the accurate information he provides out weights your by 100 to 1. George has provided quality how-to articles and reviews on his website. On his site he gives nice information about what various things are like s FACSFAC and information on the HF air route areas. And the pictures he has taken and shared with us on his site are much better than yours! I really enjoyed his Airforce One and presidental motercade pictures, he got VERY close to Bush in those shots.

Your website does not tell us anything like that. Maybe if you would spend less time harassing George and spend more time working on your site you would have a much more useful website.
I had seen where you said you were snapping some pictures of planes near your house. You then said "check my website in 15 minutes to see them". If snapping pictures and uploading them is so easy for you then why don't you quickly snap some pictures of your antennas and post them? That sure would put some questions to rest. You said it would only take 15 minutes!

Roger...

Howdy,
It's the Pro95 hands down, in my mind... The biggest feature that the Pro95
will have over the Pro94 is the alpha tags, so that you don't have to
memorize talkgroup ID's and frequency ID's.

I suggest to you to get a couple of 12 volt sealed, high mAH batteries
and a trickle charger and a 4 to 6 foot extention cord so when you do
stop into a town plug it in and charge them. The solar that you would
need, would be too costly and not to mention sunlight at every
possible chance. 6 days I think your batteries would last if you put
them in parallel.
Things to consider... you aren't going to be on the phone at all
times, and your scanner being squelched won't take too much juice to
run, and use headphones when you can (smaller speakers, less volume =
smaller current drain). Don't charge the phone until you need it, and
turn the scanner off when you will be away from it.
Just make sure that the batteries are fully charged prior to the run.

Most filling stations or restaurants with a good explanation should
allow you to recharge for free.

Good luck!

D

Len is right....Baby Monitors <unsecured> allow one to hear all that it will pick up from within the house and transmit with in it's range. May as well be considered a "Bug". Would you want your personal information, phone calls, etc to get out? You could be calling in an order on a credit card and someone would get every bit of it. You may be using a "wired" phone and THINK you're secure, when sitting near the BM, it done transmitted your info to anyone listening. While you may not care if someone hears your woman screaming for more, I doubt you'll want them to hear your personal information. Don't believe it, try it... Scanning through at about 49 MHz plus or minus, you'll find them the same as a cordless phone. Has nothing to do with a baby. It is "privacy" and "security". L.

I said nothing about the Dixie Chicks or Bush. Instead, I commented on the lack of diversity of in media ownership, including television and broadcast radio - both of which can be heard on my scanner.

I think the section he is referring to is...

7-3ï¿½ Sec. 21. ï¿½1. ï¿½A document, record or other item of information
7-4ï¿½ described in subsection 2 that is prepared and maintained for the
7-5ï¿½ purpose of preventing or responding to an act of terrorism is
7-6ï¿½ confidential, not subject to subpoena or discovery and not subject
7-7ï¿½ to inspection by the general public if the Governor determines, by
7-8ï¿½ executive order, that the disclosure or release of the document,
7-9ï¿½ record or other item of information would thereby create a
7-10ï¿½substantial likelihood of compromising, jeopardizing or otherwise
7-11ï¿½threatening the public health, safety or welfare.
7-12ï¿½ ï¿½ï¿½ï¿½ 2. ï¿½The types of documents, records or other items of
7-13ï¿½ information subject to executive order pursuant to subsection 1
7-14ï¿½ are as follows: (snip)

7-34ï¿½ ï¿½ï¿½ï¿½ (f) Documents, records or other items of information that
7-35ï¿½ reveal frequencies for radio transmissions used by response
7-36ï¿½ agencies.

7-37ï¿½ ï¿½ï¿½ï¿½ 3. ï¿½If a person knowingly and unlawfully discloses a
7-38ï¿½ document, record or other item of information subject to an
7-39ï¿½ executive order issued pursuant to subsection 1 or assists, solicits
7-40ï¿½ or conspires with another person to disclose such a document,
7-41ï¿½ record or other item of information, the person is guilty of:
7-42ï¿½ ï¿½ï¿½ï¿½ (a) A gross misdemeanor; or

Note line 7-34 through 7-36. Also note "other item of information" in line
7-38. Do you see an exclusion for third parties in any of this?

Freedom is self-explanatory. So is Democracy. The United States has a history of unexcelled freedom, so much so that thousands of immigrants are crying to come to this country every day. Some even die trying.
Look at the 750,000 deaths Saddam inflicted...and this is a conservative estimate. Ask the recently freed Iraqis.
One step at a time....
...and what did YOU do on 9-11? Wring your hands and wonder what WE did to cause the nutcases to hate us?

By the way...we are the strongest militarily. Thousands of brave men gave their all for this. We have no gulags, we don't gas our citizens to death, we don't cut off the hands of women who wear nail polish and we are not governed by a bunch of hot-headed religious extremists. After all, you Liberals won't even allow, or try to disallow, our school kids saying the Pledge Of Allegiance because it has, "Under God" in it.
You Liberals would have whined that the reason we freed the Jews from the prison camps of WWII was to get at the gold the Nazis extracted from their victims' teeth.

LIberals are programmed to be hand-wringers and whiners. They are a cancer.
...

Subsection 3 says "If a person knowingly and unlawfully discloses a
document, record or other item of information subject to an executive
order..." The key words are "a person" and "other item of information
subject to an executive order."

You are "a person." Subparagraph (f) makes "frequencies of radio
transmissions" an "item of information subject to an executive order."

> So.... unless you retrieved the information from
> protected state governmental records you can not

This is not limited to just state documents and records. Subsection 3 adds
an "item of information" to the coverage of state documents and records.

The Iraqis aren't free, they are occupied and will be for a very long time. If they are so so happy that we "freed" them then why are they still killing our soldiers?

>One step at a time....
>...and what did YOU do on 9-11? Wring your hands and wonder what WE did to
>cause the nutcases to hate us?

In your first paragraph you state that people are dying to come to our country to be free. If this is so then why on earth would anyone want to destroy the twin towers?

There is no "wondering" what we did to cause 9/11. We armed Israel to the teeth and back them so that they can do to the Palestinians what the Germans did to them. There is no "wondering" why people hate us. We have stepped on many toes on our way to Mid East domination.

>
>By the way...we are the strongest militarily. Thousands of brave men gave
>their all for this. We have no gulags,

Yes we are the strongest militarily because we have a Weapons of Mass Destruction program that we use to preemptively destroy those we don't agree with.

You should have said we have no Gulags on the mainland. Have you been to Guantanamo lately? Oh, I forgot, Guantanamo isn't under US jurisdiction so technically the US isn't responsible for anything that goes on there.

>we don't gas our citizens to death,
>we don't cut off the hands of women who wear nail polish

How could they work to support the war machine if we cut off their hands or gassed them?

It makes more economical sense to keep them around and slowly bleed them.

> and we are not
>governed by a bunch of hot-headed religious extremists.

You're right there. They aren't religious.

> After all, you
>Liberals won't even allow, or try to disallow, our school kids saying the
>Pledge Of Allegiance because it has, "Under God" in it.

Would you have a problem with the Pledge of Allegiance if the words were "Under Allah"? Would you recite it? If we are a free society then why should school children be subjected to reciting something that they may not agree with or believe in and has no place in that Pledge? Would you want to be forced to recite Under Allah?

>You Liberals would have whined that the reason we freed the Jews from the

>LIberals are programmed to be hand-wringers and whiners. They are a cancer.
>...

Our main objective of WWII was not freeing Jews from prison camps. That was a side effect of victory. There was no logical reason to keep them locked up any longer once the war was over.

You are programmed to accept whatever is spoon fed to you by the government and the media. without questioning it. There is no hope for you. You are a drone.

Where are those tons and tons of Iraqi Weapons of Mass Destruction that the US government claimed could be activated within 45 minutes and posed a real and dangerous threat to the US?
Where is Saddam Hussein?
Where is Osama Bin Laden?
Where is all that intelligence we have in the Mid-East when we need it?

> would only take 15 minutes!

Another excellent point Roger, how about it Allan, you did say it only
took you 15 minutes to upload those aircraft pictures to your website.

It will then only take you 15 mintues for you to put the antenna issue to rest....Then we all can go back to what we're here to do, talk about scanning..... Balls in your court....

1420. Heads up for Miami Ctr Hurricane Station Tests today.

Newsgroup: rec.radio.scanner
Date: 2003-06-01 14:20:02 UTC
From: allanstern@aol.com
Message-ID: <20030601102002.13592.00000540@mb-m25.aol.com>
Source record: 30351

Miami Hurricane Center is conducting Hurricane Station Tests today. A friend
of mine passed their schedule along to me, and so far it is very accurate:

Sunday, June 1st, 2003
Planned Operating Frequencies
1300z 3.911Mhz, 7.268MHz, VHF/UHF FM
1400z 14.325MHz, VHF 146.760 Rptr /UHF 442.350 Rptr
1500z 144.200MHz SSB
1500Z 14.070MHz PSK31
1700z 14.325MHz, 21.325MHz, IRLP Node 9210 UHF 442.250MHz PL 114.8
1800z 21.325MHz, 28.425MHz SSB
2000z 14.325MHz, 144.200MHz SSB

So far I have snagged comms on 3.911, 7.268, and 14.325. Listening to 14.325
right now. VHF, and UHF should follow soon.
Good time to check your equipment, especially PSK. A buddy of mine here is
using WinPSK fine on the 14 Megs.

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring
Patrick AFB (KCOF) NASA-KSC Shuttle Landing Facility (KX68)

Ignoring Roger's post? He had some excellent points, espcially about the pictures.

Your own words is that it would only take 15 minutes go get pictures up on your website. Ok incase you missed the post Roger had suggested that you put the antenna issue to rest, after all it only 15 minutes of your time to snap a picture of your antenna farm and post it to your website... What are you waiting for? Let put the antenna issue to rest, a picture is worth a 1000 words (on in your case a 1000 unneeded postings)

As far as prices go the best I was able to locate was www.national-electronics.com. Currently the radio is $339.95 and the digital card is $289.95. I purchased two 785's about 2 weeks ago and received them in 3 days. Excellent service.

However one thing, National Electronics is simply a reseller and they're honest about it. I had a question and the guy was honest enough to tell me they simply sell electronics but don't know much about them. So if you've got questions get them answered before you order from National.

But they were very honest, very quick to ship and have good prices.

We scannists have often been maligned for "snooping" on comms, but here is a great opportunity for scannists to redeem their reputation and to help keep the country safe. Below I have placed the notice that many of us boat owners are receiving in our monthly "7th District (USCG) Local Notice to Mariners."
Few groups of people have the opportunity to help identify potential terror opportunities as boater and scannists. We are familiar with our "territories," and can quickly spot something that appears to be out of the ordinary.
If the USCG will follow the lead of the IRS and provide rewards and anonymity to those of us who report suspected wrongdoing, I think they might even be more sucessful. And the USCG/USCS could do it; they probably seize more assets of wrongdoers than the IRS !! And imagine how many more scanners Radio Shack would sell !!

AL STERN Satellite Beach FL

Operation "On Guard"
US Coast Guard Marine Safety Office Miami announces Operation "On Guard." This operation is designed to employ Coast Guard active duty, reserve and
auxiliary, FBI, USCS, INS, and FDLE personnel in response to suspected terrorist
activity at the waterfont facilities of the US. South Florida is extremely vulverable because it is the terminus of illegal aliens and narcotics smuggling routes from the Bahamas, the Caribbean and South America. These routes are well estabblished and are readily available for use by terrrorist organizations. An urgent need existed to make the American Public equal partners in the
fight on terrorism. Operation "On Guard" creates an effective deterrent measure
that employs the eyes and ears of the marine industry and the boating public, people that know every inch of the coastline because it is where they work and play. Potential terrorists are put on notice that their activities will be seen and reported.
Operation "On Guard" takes a two pronged approach consisting of face to face visits by USCG, FBI, USCS, INS and FDLE personnel combined witgh a coordinated joint agency media campaign to reach Marina Operators, Marine Dealers,Bridge Tenders, Commercial Fishermen, and the Boating Public. This operation
relies on Coast Guard Auxiliary programs already in place like the "Clean Marina" program, Vessel Safety Checks, Marine Dealer Visits and the Commercial Fishing Vessel Safety Program to reach their normal customers, the waterfront users. THE PUBLIC IS PROVIDED WITH THE TOLL FREE NUMBER (1-800-424-8802) for reporting suspected terrorist activity to the National Response Center, and the

1-800-BE-ALERT number for USCS along with a list of reporting criteria.
Report:
Suspicious persons cnducting unusual activities
Individuals establishing businesses or roadside food stands in proximity to marina or
bridge
Unknown persons photographing or creating diagrams.
Unknown or suspicious persons loitering for extended periods of time
Unknown or suspicious persons renting watercraft
Suspicious venders attempting to sell/deliver merchandise or drop off packages.

1426. NASCAR Pepsi 400 Notice: Live Driver/Crew Comms Broadcast.

Newsgroup: rec.radio.scanner
Date: 2003-06-01 16:00:11 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3EDA230B.10305@licensed4fun.com>
Source record: 30357

Iï¿½ve been receiving a lot of emails from NASCAR/Scanner fans asking if Iï¿½m planing on once again broadcasting the live Driver/Crew radio communications during the Pepsi 400 race.

On Saturday July 5, 2003 I do plan on broadcasting Driver/Crew and Officialï¿½s comms during the race. As before I will be using Live365.com for audio streaming. You can access my live broadcasts at http://www.MilAirComms.com and youï¿½ll see the link.

Some people ask me why I use Live365 and have suggested other audio streaming systems which are free (Live365 charges me about $20.00 /month but is free for the listeners). The reason I use Live365 is because they are the only service which Iï¿½ve found that can handle the amount of traffic my live broadcast generates. In Feb. my Daytona 500 broadcast had well over 200 simultaneous listeners.

Also, as before Iï¿½ll be broadcasting up to 4 scanners simultaneously via an audio mixer allowing me to quickly switch between leaders and interesting comms.

Iï¿½ll post more information and updates as we get closer to race day.

> There MUST be something. Please help.

The only SECURE one is one that does not transmit via radio waves (or wireless).

Run a pair of wires from the baby room to the room or rooms where you want the receiver. If you only have one phone line in your house, you can use the yellow and black wires in the phone jacks in each room of your house as they are not connected or being used for anything. This way you can have a receiver in any room of your house that has a phone jack and don't even need to run any extra wires, they are already there for you. The only way someone can listen in now is if they tap into the telephone network interface outside your house, but you can even disconnect the black and yellow pair from going to the outside of your house for extra security.

No wireless device will be secure. NEVER. NO EXCEPTIONS, no matter what the claim by the manufacturer. The fact that the receiver can be placed outside your house and pick up the transmitter is proof of this. All anyone needs is to buy the same unit and listen in. If YOU could go to the store and buy the receiver, so can anyone else.

Even wireless routers and computer hookups that let you use your laptop to the internet in any room of the house, means your neighbors can see everything that you do online as easy as watching television. Now when you go to a "secure website" to enter your credit card numbers, it is no longer secure and you are BROADCASTING everything you do over the airwaves for anyone to pick up and watch.

Wireless is never secure. Forget about what frequency, 900 Mhz, "scrambled" "spread spectrum" etc. They can all be listened in to by others. That is a fact, not a debatable subject or opinion. I demonstrated to my neighbor who was bragging that his "spread spectrum" cordless phone could not be listened in to by anyone. With his and his wife's knowledge and permission, we had his wife make a call on the phone from their house, and I brought him into my house and tuned in his wife's conversation on a regular no bells and whistles scanner to his amazement. (there is no such thing as a "spread spectrum" consumer telephone, it is an improper use of the term, just as people misuse the terms "bandwidth" and "troops")

Even those phones with "scrambling" are easily listened to with kits costing $25 that you can buy for your scanner. Easier yet, is just to buy the same type of phone and listen away. Or put one scanner with the "scrambled" phone call next to your "scrambled" phone, then use a second scanner to listen in on your phone and then you can understand the conversation as it was frequency inverted twice.

This is not a newsgroup about police scanners. That would be labeled something like alt.radio.scanners.police or alt.radio.policescanners This is a group about scanners, and a question about baby room monitors that can not be picked up by scanners is most appropriate here. A reply like yours that does not answer the question is NEVER appropriate in any newsgroup. If you don't know the answer, you NEVER reply to a post with a person's question. Only those that have an answer to the question should EVER post a reply.

Posts like yours only waste the time of the original poster who reads your reply thinking it will be an answer, only to find out it is an insulting waste of his time with no information that was requested at all.

Hope this helps.

So that no one else outside the home would be able to listen in to what is going on inside the house.

That is what was implied. I can think of dozens of other ways it could also have been worded and would still have meant the same thing and been appropriate.

He doesn't need to specifically mention scanners, as we all know that is the number one device used to listen in to baby room monitors with. The obvious does not need to be mentioned on a newsgroup with people where everyone knows this already.

Your attempt to try and weasel out of your statements as a bad lawyer would is only going to dig you deeper into a hole. The best thing to do would have been to admit you made a big mistake.

Don't be ridiculous. Baby room monitors have more to do with the scanner groups than the ham groups. Do a usenet search on Baby room monitors and compare how many times it gets mentioned on scanner groups as compared to any other group.

I answered your question in another post on this group.

It is ironic that a complaint about discussing baby room monitors on a scanner newsgroup is made by a person who has no problem with the following statements being made on a scanner newsgroup:

> Hey fuckwit. I posted to the same groups the original poster, posted from.
> Just wanted to make sure he got the message. Apparently you didn't. Now go
> fuck off you wanker ass bitch!

I can't see how any of that pertains to scanners, but baby room monitors I do.

A baby room monitor broadcasts ALL conversations and audio in the house, it does not filter out, or just pick audio that is from a baby, and then only baby audio that originates from the room the transmitter is placed in.

Thus you telephone calls concerning private matters, your private conversations with your spouse, and your vacation plans and information about how long your home will be empty and prime for a robbery are all transmitter over baby monitors as well.

Hope this helps for you to understand what most others here took for granted that everyone in a scanner group would already know.

NOTHING WIRELESS is going to be secure. Think about it. No matter how good the scrambling or encoding of the audio, the receiver is able to pick up the audio and let you hear it clearly, right? So if your neighbor goes out and buys the same receiver from the same place you bought yours, he has the same descramblers and technology to listen in too.

Forget about wireless for anything you don't want broadcast. WIRED devices that don't use radio waves are the only way to go. More reliable too.

They are not spread spectrum, but even if they were, the fact that the user can listen in to them, means so can anyone else. Just buy the same phone and tune in.

Have you not heard the news about how the US was listening in to the Iraqi communications? I am sure Saddam has a lot more money and can buy a hell of a lot more complex scrambling and spread spectrum communications equipment than is sold at Best Buy or Circuit City, yet since it is still wireless, anyone, including the US government can listen in to it.

> Why can't they make baby monitors?

They do. WIRED intercoms.

> I don't trust Panasonic any more.

They are one of the better companies around. If you need parts for something, the consumer can order parts online, and have them sent to their home! I wish all companies would do this. Just ordered a belt for someone's 15 year old boom box and in a few days had a new belt in the mail for 3 or 4 bucks and the unit works as good as new. Panasonic rules.

> Didn't they have a unit that was supposed to be secure, but transmitted in

I offered to prove that I have the antennas I claim. I offered to put up $5000 and asked you to do likewise. If I cannot prove that I have the 36 or so antennas I listed at my Satellite Beach house. The offer is documentable; it was posted publicly.
That is still a public offer. If I cannot prove that I have all of the antennas I listed, you get $5,000. Which is probably more than you have ever seen at any one time. Think of it, you might be able to buy a boat !!
I will do better than show you pictures, which you would dispute, I will show you the antennas in person. You can come here with bodyguards, an attorney too, and that will settle it.
Have your lawyer draw up an agreement on the procedure you find acceptable for me proving the antennas to you in person. I will sign it, I will put the money in escrow, and we will proceed with the process.
See George, I simply do not trust you. You have lied about me so much that I cannot trust that you will abide by my pictures demonstrating that I have the antennas. You say "post the pictures," as if that would end this. That will not end things here. I am not a fool. You will claim they are not pictures of my house, or they do not show a certain antenna on my tower, or that I could not have heard a certain acft I posted because you don't see an antenna pointed in the right direction that is capable of that aircraft freq. You will say, "I cannot see your house next to that antenna, so how do I know it is yours?" You will say "That antenna is on the ground, I meant only antennas on towers and posts." You will say "How do I know that that antenna is not at your Yeehaw Juntion homes (nearer to Avon Park than Satellite Beach). You would say "How do I know you didn't use Adobe PhotoShop to edit the picture. No, the pictures would never be acceptable to you, you would claim they are false, just like you claim the postings I make are false. All I would be doing is giving you a chance to attack me some more. Now you say pictures will prove I have the antennas, but then you will say "It is only a picture of an antenna; how do we know it is at your Satellite Beach house?" See as I said I did not fall off the turnip truck. And really, if you were any kind of a businessman, you should not accept a photograph as evidence, because of today's technology for changing photos.
Let's put this to rest for once and for all.
A man who really makes $250,000 a year, almost always has a lawyer under retainer. Have your lawyer draw up an agreement. I need something iron-clad and so should you.
Can't afford $5000? You claim to make $250,000 a year on Ebay. That is

what your SigLine said, "I make $5,000 a week on Ebay," and your letter to me posted here says you can prove that you make that. So what is the problem putting up a lousy $5000 that you are sure you will not lose. You think in fact you will gain $5,000, so put it up.
$5000 is a pittance to a guy who really makes $250,000 a year on Ebay. Put the money up, you get to come here with a body guard or two, and you get to get your pics taken next to my antennas, or next to my Corvette, or my Dodge 250, or my Isuzu SUV, or my boat. You get to learn a few secrets about why I hear things you can't too. (Hell maybe that is what this is all about; maybe you want the pics so you can improve your stuff.)
I will even have a bunch of the guys who post on FLACOM, CFLG, and BrevardRadio, as well as Milcom. They have seen my house and antennas and radios; but you will have a chance to meet some of the guys face to face. Jack Nesmith mentioned to me that he never met you; well this would be a chance to meet more people, not just the newbies you have been surrounding yourself with. Nothing against newbies, George, but you can't learn anything from them.
See your lawyer tomorrow, George, have him draw up the papers, I will sign them, and get rolling on invites to the other guys.
Here's the listing to confirm.

AL STERN Satellite Beach FL using
SCANNERS: Three Pro2042s, three Pro2035s, seven Pro2045s, one Pro2036, one Pro2040, two Pro2048s, one Pro2049, two Pro2050s, four Pro2006s, one Pro2005, one Pro2004, one Pro2003, two Pro2002s, three Pro2009s, two Pro2032s, two Pro2022s, two Pro2021s, one Pro2026s, one Pro2023, one Pro2024, one Pro2027, one Pro508, one Pro55, one Pro57. Two BC780s, one BC800XLT, one BC760, one BC590XLT, two BC-250s, three BC210XLTs, two BC350As, one BC450A, one BC700A, two BCT-7s, one BC-310A, one BC-155, one BC-175XL, one BC-178XL, one Fox BMP 10/60.
HANDHELDS: One Sony ICF-SC1, one BC2500XLT, four BC200XLTs, three Pro43s, two Pro26s, one Pro60, one Pro62, one Pro64, one Pro90, one Pro46, one Pro28, three Pro39s, two Pro34s, one SC150 Sportcat and more.
ANTENNAS: About three dozen, including NilJon HD WB Omni, two Max Systems Ground Planes (cut to 225MHz), Scantennas, Grove Beams, Discones, Radio Shack 20-042 Omnis (like Scantennas), two Informant mag-mount whips, Larsen PO 150 whip, Cushcraft Commercial grade FM beam, etc, many on my 45-foot Rohn tower; and Radio Shack center-loaded whips and Bearcat AT002 window-mount antennas for handhelds. Also ample use of in-line amplifiers.
HF GEAR: One Icom R75, three DX-394s, three DX-390s, two DX-398s, one DX-440, one Yaesu FRG-7, one SW-100, MFJ-1020A Active Antenna, H-800 Skymatch LF/MF/HF Active Antenna, Super Vak-Tenna Active Antenna, many indoor/outdoor wires.

There may be no or few true SS, but with frequency hopping, I doubt that
there's someone going to have the right algorithm to listen in.

Even the most sophisticated random scanner enthusiast will not have access
to the technology that the US government has.

And if that one guy existed, would he be located within a few miles of me?

The reason, as I posted elsewhere, was because a few years ago they made a phone which was supposed to be secure, in that it used SS.

However, only one leg of it was SS, and the other was transmitted in the clear.

Holy fuck can both of you's grow the fuck up. And keep all this bickering between personal emails b/w you. We don't need it here.

I'm sure both of you are good at picking out the comm's that you listen too, so just keep it at that.

Besides, Georges site has much more to offer than your's Allen, so I think you might want to revamp the site a little.

But, please, let's just get back to the issues of scanning.

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

We just picked-up a copy of the Scanner Master Police Call 2003 - Volume 2 with CD. We find the CD only has 29 frequencies for our area but there are will over 700 frequencies on the Mr. Scanner CD??? Whats up with that????

Scanner Master http://www.scannermaster.com/store/01-630770.html

Mr. Scanner CD from Grove http://www.grove-ent.com/SFT10.html

I think the giveaway on what your getting is the Scanner Master only has 1 CD and Mr. Scanner has 2 CD's. So just a heads up to the folks looking to spend $20.00 or so, don't waste your time with the Scanner Master Book and CD, i.e. the folks at City Frequ's have better info then they do!!

Well if your that old you know you can get a 2 1/2H.P. motor that will also bolt to your front forke then can help you up hills :-) San Fran to LA on a bike?? How you going to do that?? Don't the C.H.P. frown on guys on bikes peddling down the 101 or the 5?? I no the coast highway does not go from San Fran to LA, so how you going to do this?? Oh and the wheel generator works really well if you put a 5lbs flywheel on the back side, makes it a snap to peddle then :-) been there done that, biking that is...

>keep all this bickering
>between personal emails

Couldn't agree more. I've been reading this group for many, many months and have gotten some really good information from it. I'm in Jacksonville and can confirm (for what it's worth) that many of the comms posted by George are accurate because I've logged the same comms/freq/aircraft IDs at the same times George has posted. I can't vouch for him otherwise. I've been involved in monitoring since the days you could hear police transmisions at the top end of the AM broadcast band...guess I'm just an old relic, but it's an enjoyable hobby and doesn't benefit from the kind of
behavior we've seen here recently. Down off the soapbox now...my best to all of you.

Dwight

Your not understanding the point at all. If you are going to go THAT route,
then too understand that most people are not using the sophisticated scrambling
and high tech communications that the Iraqi government and Saddam had either.
We are on an equal playing field in both situations here.

> And if that one guy existed, would he be located within a few miles of me?

Like I stated in another post, my neighbor was just like you and bragging about
his "spread spectrum" cordless phone until I brought him into my house and we
listened in to it with a standard handheld scanner without any fancy bells or
whistles.

These phones are NOT spread spectrum, and they do NOT frequency hop either, they
stay on the same channel until you press the channel button.

It did not, unless it cost $5000 or more. Consumer products are misusing the term "spread spectrum" and the FTC should really crack down on that as it causes so much confusion to the public consumer.

Think of it this way, when someone says don't post too many posts because it takes up too much "bandwidth", that is also an improper use of the term "bandwidth" and makes absolutely no sense at all. When the news reports that 10 US troops were killed, people think that perhaps 100 or more people were killed, when in fact the news reporter MEANT only 10 soldiers were killed, but misused the term "troops".

Any consumer cordless phone that says it uses "spread spectrum" technology is also wrong for using that term incorrectly.

Hope this helps.

You should have read my other post where I explained this. See if radio shack still sells wired intercoms, else find one on Ebay, or garage sale, or hamfest, or somewhere else on the used market for $5 or so.

Lock down the send or transmit button on one unit and put it in the baby's room, listen in on the other unit, no one outside the house will ever listen in on it.

They don't frequency hop either. But even if they did, which they do not, you just program your scanner with the 10 or 20 channels it uses and when the channel changes, the scanner jumps to it instantly. The same way it does when anyone manually changes the channel and your scanner jumps to the new frequency and you don't miss any conversation.

I'm 61 and cycle all the time. I also build and race sports cars and
love it. I don't want a motor on the front of my bike, I'll peddle my
own ass thank you.
I like the 5 lb fly wheel thing, tell me about it please, or send me
your old one for the trip!
The CHP's don't care, it's a rolling party from SF to LA, everyone does
it. We only ride 35 to 55 miles a day with "maybe" a little hill on the
way. We just come right down the 101, I'll start from the GrayDog House.
I'm starting to get thing laied out and tested for the trip I am also
picking up my training pace to be sure I am ready.

Eric,

Actually, it is a GOOD suggestion.

Although these are (semi) "wireless", they don't transmit in the clear over the air waves.

No, they are not "secure" as security goes, but they are much less likely to be monitored by 'unauthorized ears'.

YES! You can buy a pair, install them, use them and have a false sense of security that no one can listen in - until you go back and purchase another unit right off the shelf. After purchasing our first pair, they worked so well that I went back and purchased three more, for a total of five. They all work well from one unit to the next. But they're all within the same household, within a max distance of 150 ft. on the AC line, not the air waves.

They're not perfect, but I made the suggestion because I feel the "AC-line" type are less susceptible to eavesdropping than open-air RF units are.

Wired set(s)? Yes, I agree these are the 'safest'. But not everyone is able to run the wires, especially if they are a renter.

The idea of using the black and yellow wires on the phone pair is a good one, as long as the room is already wired for a phone. (Considering the renter here).

You can get FCC license info from their web site for nothing. Plenty of other sites as well. Why spend a nickel on what are basically data dumps.

Only State of Nevada records are subject to an executive order,
therefore items from other sources are not restricted by this proposal.
It says nothing about information from other sources such as FCC
records, private we pages, OTA monitoring or the like.

They sure do. They are not sending audio directly across the AC line! Look at the last page in the owner's manual of any of these and the specs page will tell you exactly what frequency they transmit on. I tuned a radio I had to the frequency of one of these once and was able to hear it clear over the air waves just fine.

> No, they are not "secure" as security goes, but they are much less likely to
> be monitored by 'unauthorized ears'.

Nonsense. Just tune in to that frequency and that is all there is to it. If the signal is weak, just stand outside the person's house near an outside outlet or where the power comes into their home with your radio and listen that way, or aim a directional antenna at their power lines.

> Wired set(s)? Yes, I agree these are the 'safest'. But not everyone is
> able to run the wires, especially if they are a renter.

I will explain it again, one more time. Even in an apartment a friend of mine was able to do this without any wiring, he just used the black and yellow pair of wires in the phone jacks that are not being used for people with only one phone line, and put modular plugs on the intercoms so they could be plugged in quickly and easily to any modular phone jack in the house and could be used in any room.

Or, just have the wires run on the floor from one room to another while you are using the monitors. You can even push them down between the carpet and the wall and you won't even see them. I have hidden thick cable tv coax this way, so the tiny wires these things use are not a problem.

Turns out Radio Shack DOES still sell the wired intercoms for only $14.99 for a set cat # 43-3104 and only needs ONE 9V battery (or you could always use an AC adapter)

However this is looking at last year's catalog since they don't have catalogs anymore, you can never tell what they still have and don't have for sure. Tried the online website, but it is still riddled with Java and cookies and still never works for many browsers, only those with the latest ones that update all the time, so I couldn't find any info from that mess of a website, only errors and crashes.

> The idea of using the black and yellow wires on the phone pair is a good
> one, as long as the room is already wired for a phone. (Considering the
> renter here).

Even with apartments, the jack in one room can be accessed on the other side of the room through the wall and put in a $4 jack there and leave it, it is an improvement that the landlord is not going to complain about. Will take you 30 seconds to 5 minutes to install depending on how good you are at it. Or again, hide the wire between the carpet and the wall where it will fall into nicely and not be seen and can be just as easy pulled back out. I wired phones in bathrooms and every single room back in my apartment days and the wires were all out of site and took me only 2 minutes to remove them from the whole apartment before I moved out without any damage to anything.

People just have to use their brains and think about stuff sometimes.

For starters, you need to know what the hell you are talking about before you criticize products. Scannermaster does NOT make/manufacture Police Call, they merely SELL it. Sure they work with the people at Police Call, however they are not affiliated with them. ScannerMaster is out of MA, and Police Call is out of CA...

700 Frequencies, huh? Of those 700 how many are actually in use or even useful for that matter? Perhaps you would like to enlighten the group as to just where "our area" is so that this can be verified by others in the group. I find it VERY hard to believe this can be true as I live in a VERY SMALL community, and there are over 60 listed frequencies just for the surrounding cities, and this doesn't count the county-wide and state-wide frequencies.

Another point to consider. A lot of the info in Police Call is made up of USER CONTRIBUTED data. If you aren't happy with the number of frequencies for your area, then why don't you contribute some of the ones you have and make the CD and book a little more informative for those in your are who may purchase the book and CD in the future...

PH

P.S. I wonder if the FTC knows you are using their UCE email address as your own... I bet they don't appreciate it. Wonder what they would think of you if they knew... Hmmmm....

1475. New Bearcat BC250D scanner (any use for TETRA !?)

Newsgroup: rec.radio.scanner
Date: 2003-06-02 00:16:41 UTC
From: bla <comsecnl@hotmail.com>
Message-ID: <JHwCa.197942$EU3.12991452@amsnews03.chello.com>

Anybody have the new Bearcat BC250D scanner ?, Its a portable and includes the USA Apco25 standard , The american equivalent for our
European Tetra/Airwave network.
I know (i assume) its not working for Tetra but still... it might have a use for tetra because it might have the right mf-filters
and since the apco part is an optional card that can be plugged in, there might be a perfect data output available at the
card-connector. there may be more
features that could be interesting for tetra .

Another idea is to modify a Bearcat 3000xlt for Tetra-reception (still not intelligeble). the problem there is:
It wont stop scanning and squelch doesnt open because of the to big bandwidth .
It should be very easy to make a small modification for that:

1) Replacing the filter(s)
or
2) Putting some components in parallel with the existing filter in order to make it wider
3) Best would be a switchable filter (normal/tetra)

I am not shure of what filter you need in terms of bandwidth it should be matched to the tetra bandwidth in order to get the best
reception.
For example a AOR5000 will work good because it has switchable filters

Such a modification will make your scanner stop when a tetra-transmission occurs. (i just realise that this might be useful
for other signals as well (such as GSM and other higspeed data-transmissions)

Resuming:

Anyone have this new scanner ? (and has tried it on tetra ,does it stop and open ? (no ?apco less bandwidth then tetra ?))
Anyone ideas for above modification (preferable Bearcat 3000 xlt) ?

And now for something completely different.....

"In retrospect, lighting the match was my big mistake.
But I was only trying to retrieve the Gerbil," Eric Tomaszewski
told bemused doctors in the Severe Burns Unit of Salt Lake
City Hospital. Tomaszewski and his homosexual partner
Andrew (Kiki) Farnom, had been admitted for emergency
treatment after a felching session had gone *seriously wrong*.

"I pushed a cardboard tube up his rectum and slipped
Raggot, our pet gerbil, in." he explained. "As usual,
Kiki shouted out 'Armageddon,' my cue that he'd
had enough. I tried to retrieve Raggot but he wouldn't
come out again, so I peered into the tube and
struck a match, thinking that the light might attract him."

"At a hushed press conference, a hospital spokesman
described what happened next. "The match ignited
a pocket of intestinal gas and a flame shot out of the
tubing, igniting Mr. Tomaszewski's hair and severely
burning his face. It also set fire to the gerbil's fur
and whiskers which in turn ignited a larger pocket
of gas further up the intestine, propelling the
small, cute, furry brown rodent out like a
Civil War cannonball, striking Tomaszewski, and
then ricocheting across the room to the far
wall with a splat."

Tomaszewski suffered second-degree burns and a
broken nose from the impact of the gerbil,
while Farnom suffered first and second
degree burns to his anus and lower intestinal tract."

And now, back to more Internet True Stories of love and lust....

Boy there's a lot of truth to this post. Unfortunately, given the record of the U.S. Government and its willingness to prosecute John Q. Public and release Mohammed Q. Terrorist, it might not be worth the effort.

Imagine someone illegally listening to cell phone or cordless phone conversations. This fictitious person happens to hear a definitive reference to a pending terrorist plan. What is he to do?

In the ideal world, he would try to report it to the authorities (anonymously as possible), allowing them time to react against the potential offenders, and stop any incident before it happens.

In the real world, he would report it to the authorities, (anonymously as possible), the authorities would realize that using the scanner in this way is against the law, they would send the FBI to investigate the person making the report, the person would be found and imprisoned for violating the rights of the potential offenders, the potential offenders would receive an apology from the government for the government not having acted quickly enough to pass laws against possession of scanners, the potential offenders would be given a massive settlement since their rights were violated by an American citizen, the government would expand the powers of an existing agency (the new ATFSD Alcohol, Tobacco, Firearms, and Scanner Division) to hire armed agents to begin the difficult work of ferreting out unregistered scanners, and so on.

The authorities don't seem to be too interested in intervention, and you don't have an official degree. Why would they rely on the assiduous activities of concerned citizens genuinely interested in protecting their country? Banish the thought.

Scanner enthusiasts can and do contribute to local police work. A retired officer, now the mayor of a local community, expressed this idea to me. He said that over the years, when they were in foot pursuit of a suspect, it was not uncommon for citizens that were monitoring police communications to call and report the location of the suspect that they were pursuing as the suspect passed these citizens homes. I have heard police being notified of the location of vehicles that they were pursuing but have lost sight of by citizens monitoring police communications. Though scanners contribute in a slight way to the commission of crimes, the police in my area seem to be savvy to these law breakers, and use alternate channels or subtle signaling to thwart the suspects.

Overall, a notified public, one aware of events going on in their neighborhood by the monitoring of police frequencies, is much more likely to adequately protect themselves from the vicissitudes of criminal activity. The evening news does a bad job, they report only a small amount of the crime that is evident by listening to the police radio.

Secrecy is the first step to tyranny.

Avoid tyranny, and remember, Friends buy Friends Scanners.

How much "lot less" do you think it will be at the completion of the auction?

I've seen things jump up astronomically at the last second of the auction, let around 2 days.

The item has no bids yet, with a buy it now of $229.95

The VR-500 is a great receiver, I have one as well as other models.

Regards.

Man, you are so full of crap, it isn't funny. They DO send a signal across
the AC line! Call it what you want. And I did check the instruction sheet.
It states that it uses the AC line instead of (dedicated) wires, or "radio
waves".

> > No, they are not "secure" as security goes, but they are much less
likely to
> > be monitored by 'unauthorized ears'.
>
> Nonsense. Just tune in to that frequency and that is all there is to it.
If

way, or
> aim a directional antenna at their power lines.

Not nonsense. Common sense. And as the original poster was concerned about
secondarily (security being primary), and others have mentioned, "DISTANCE".
"D-I-S-T-A-N-C-E". Now all of a sudden you're talking about standing
"outside the person's house near an outside outlet or where the power comes
into their home...". That's a good way to get arrested, or SHOT in my neck
of the woods. Ask a cop what the consequences would be if a person was
caught outside someone elses home, doing some "eavesdropping" with an/any
electronic device. Catch the expression on his/her face...

There you go, tearing up property that isn't yours to tear up. Oh, and ask ANY half-intelligent landlord if he/she minds you punching a hole in the wall from one room to another.

Eric, in your earlier posts it seemed you were a fairly intelligent person - but with this negative attitude of yours, and aire of "I'm right, you're wrong", you're really starting to disappoint me.

> improvement that the landlord is not going to complain about. Will take

In that case, he's royally screwed. because his only choices are

1. report it to the authorities, and he gets arrested as a terrorist for illegaly listening to phone calls (at least that's probably how the authorities would see it)

2. he doesn't report it at all, and gets arrested as a terrorist for not reporting illegal terrorist activities that he knew about (if the government finds out that he purposely didn't report terrorist activities that he knew about, because that violates the U.S. Patriot Act).

Like all state legislation, this legislation only addresses Nevada residents, not federal agencies or those in other states. The goal of the legislation seems to be to establish what is subject to executive order in Nevada. Subparagraph (f) says "documents, records, or other items of information that reveal frequencies for radio transmissions." That does not limit this to just State of Nevada records - it includes documents, records, or other items of information. A frequency list is a document that would reveal frequencies for radio transmissions. Therefore, this legislation would seem to restrict Nevada residents from distributing frequency lists.

Of course, I'm not a lawyer so your interpretation is as good as mine. Nevada residents, on the other hand, should make sure your interpretation is correct before handing out frequency lists.

Perhaps clarification is needed. The goal of the Coast Guard's "Operation On Guard" is to urge citizens to report suspicious activity witnessed on or in America's territorial waters, waterways, and waterfront facilities.

Scanner users can assist that effort by reporting suspicious radio communications heard on marine frequencies or elsewhere. However, in no way does "Operation On Guard" or the Coast Guard advocate the violation of existing laws relating to radio operations or monitoring.

In response to your specific question, any information involving possible terrorist activity should be reported. If you are concerned about potential repercussions, remember all calls to the telephone numbers listed in the press release and below are anonymous and/or confidential and that the agencies involved are not engaged in enforcement of FCC regulations or the laws concerning cellular phone monitoring.

On another note, persons reporting suspicious activity should call 1-800-424-8802 or 1-800-BE-ALERT, not the telephone number for LCDR Cate posted towards the bottom of the posted message. The Commander's phone number was intended for use by members of the media seeking additional information about the program described.

Report the information. All calls to the telephone numbers listed in the press release are anonymous and/or confidential. Further, the agencies involved are not engaged in the enforcement of FCC regulations or the laws concerning cellular phone monitoring.

Besides, if one is arrested for reporting a potential terrorist incident, that person will have no problem finding character witnesses to testify at the trial. I'll stand in that line myself.

Well I don't do sports cars but I do build a car or three :-)
http://webpages.charter.net/moment/hobby/hobby.htm
I am a member of The Good Guys and the NHRA :-) And I do have a few other
hobbies:
http://webpages.charter.net/moment/den/computer.htm
as well as scanning.

I don't want a motor on the front of my bike, I'll peddle my
> own ass thank you.
> I like the 5 lb fly wheel thing, tell me about it please, or send
> me

And it's been just a few years from when I biked to Santa Cruz from Santa
Clara :-) I built a 5bls flywheel in shop, i.e. Wilcox high school. Back
then the small generator had a bolt out the back and a small wheel that ran
on the front wheel of the bike on the nose. I bolted a cup shaped flange
under the bolt on the back and then bolted the flywheel to the flange. Once
I got going the flywheel was a big help in getting over the hill via hwy 9
up the backside to Santa Cruz :-)

Tomorrow I think Iï¿½m going to take a day or two and spend in the Hollywood, FL area. And as I did in Tampa two weeks ago Iï¿½ll have 2 BC 785ï¿½s and a BC 780 beside me (http://www.milaircomms.com/mobile_radio_shack.html)

I plan on scanning the standard VHF/UHF CoastGuard freqs, Miami Center UHF, Avon Park/Placid Ranges, and Homestead AFB frqs in. What other Military/Goviï¿½t freqs am I missing? Iï¿½m not interested in Local Public Safety, just Mil, Fed and Goviï¿½t.

Iï¿½ll have a scanning report after I return (and maybe some fish to!)

> Scanner Master http://www.scannermaster.com/store/01-630770.html
>
> Mr. Scanner CD from Grove http://www.grove-ent.com/SFT10.html

I'm not endoring one product over the other as I don't have either. But
I am wondering, the CD Grove sells (Mr. Scanner) was that actually put
together by Grove vai the FCC database? Also when was the last update?

I've bought a few CD's from Grove in the past (but not the Mr. Scanner)
and have found them to contain a lot of outdated infomation & frequencies.

Just My $0.02

George

loser!
anyone with that many antennas has a serious case of penis envy.

Not only is this guy not a professional victim, he's not even Dan Conti.

I highly doubt Dan would enter an email address of DanConti@whines.alot

It's simply a moron that gave his money to one of those pussy ass anonymous news services (COTSE) for the sole purpose of trolling.

--
The following is a list of morons.
That's all. Just morons. Doesn't matter
what they've done or what they said,
it's all been equally moronic.

The moron list:

The top moron in any group on Usenet is Gandalf Grey - gandalfgrey@infectedmail.com - alt.current-events.clinton.whitewater (Yes Hanson. I do post your name in every one of my posts and now you're at the top)

Bush Busta / A.K.A Jim Kennemur - BushBusta@America.com - alt.current-events.clinton.whitewater (Usually giving Gandalf the reach around)
banjocat - banjocat@bellsouth.net - alt.current-events.clinton.whitewater (Fuck you and you threats)

look
> like to you????

It looks like someone (you) didn't graduate the 3rd grade. But then it
always does, no matter what you say.

> Thats why I had a link to a local web-site with that over 700 listed, if
> you had your spec's on you would have seen that!!
> http://webpages.charter.net/moment/fayette.htm

Oh you mean worthless shit like these?

151.8350 MC DONALDS REST PA FAYETTE
151.8350 TACO BELL PA FAYETTE
151.8350 WENDYS PA FAYETTE
151.8350 HARDEE S #HD517PA PA FAYETTE

Yeah, I can't wait to go to Fayette and listen to you work the drive thru!
Which one of these do you work at?

>
> Of those 700 how many are actually in use or
> All of them are in use!!

Wow!! It must be true - you used TWO EXCLAMATION POINTS!!

>
> > even useful
> useful is kind of up to the listener ain't it??

I don't need to listen to know that half of the crap you listed is
worthless.

> Why don't they get the information from the FCC like the folks at Mr.
> Scanner

MR SCANNER??? BWAHAHAHAHAHAHAHAHAHWHWHHAHAWHAWHAHWAHWAHA!!!!!!!!!!!!!!!!!!!

>do, or better yet why don't they buy a Mr. Scanner CD

You must be joking, right? Even you are not this stupid - I hope. I guess
where you work in "da FEDUHRUL GUBMINT" they don't enforce copyright laws.

>and wowya
> theirs all the info they need D'oh....

Spoke like a true clod. This is just too easy. Is "wowya" even a word? I doubt that very seriously... you come off like a 15 year old snot nosed little mama's boy when you argue - it's actually pretty funny....

> After spening $20.00 on there book
> why should I then have to do all the work for them????

There book? Spening? Jesus H dude, lay off the bottle before posting. Please. You're making my head hurt. It's like reading a first grader's handwritten book report. Are you even old enough to drive? Does your mommy know you are on the computer again?

> And the Police Call
> CD .com goes right to the Scanner Master web-site and the 800 phone number
> is also

Makes sense to anyone with a brain (I guess that's why you don't get it): The owner of the site is the editor of the book. You'd know that if you knew how to read. But it's obvious to all that reading and writing are not strong suits for you. Trolling for sailors seems to be more your style.

>Huuuuuuummmmm.. You know what
> folks wouldn't no you don't have a clue but you open your mouth and remove
> all doubt :-)

Yup. You sure do.

> And yes I am a spam
> fighter as well!!

Oh please.

>So please please send me your spam, I love wacking morons
> for that $10,000.00 a pop fine....

Gimme a break. The only thing you wack is... well... let's just say your "wacking" is not appropriate in mixed company.

> PS I'm also a member of Private Citizen http://www.privatecitizen.com/ and

Maybe if you restricted your FA/FS to the appropriate groups you
wouldn't annoy so many people.

There are plenty of forsale, swap, marketplace, groups in the radio
groups where your listings would be appropriate and appreciated.

Dave

NOT one on the anonymous complainers.

Once again, it is not ME posting these items.

Apparently, as a result of foolishly responding to some sick MORON, AUNT BEA, telling him / her or whatever that I was kill filing them, this person is now somehow posting to the USENET using my name, and digging up some old threads and re-posting them.

Check the ISP trail and you will see what I mean.

Anyone have any input as to how I can deal with this new nonsense?

This is something I have not seen on the Usenet groups, and I thought I saw it all.

Nope. But what I do see says this:
7-3 Sec. 21. 1. A document, record or other item of information
7-4 described in subsection 2that is prepared and maintained for the
7-5 purpose of preventing or responding to an act of terrorism

Meaning that as long as Police Call doesn't change their name to something
like "Preventing Terrorism for Dummies" then you should be able to own a
copy without worrying about it.

Great, looks like ScannerMaster hosts the Police Call website for them.
Yippy! Ever bother to open the book? You would notice that the address for
Police Call is in CA, not MA... Just because someone hosts a website for
another company doesn't mean that they own the company they are hosting!

Taken straight from the book, Page 20 of Police Call 2003:

Email : scangene@XXX.com (filtered for SPAM reasons)
Postal:
Police Call
PO Box 35002
Los Angeles, CA 90035

> > 700 Frequencies, huh?
> Thats why I had a link to a local web-site with that over 700 listed, if
> you had your spec's on you would have seen that!!
> http://webpages.charter.net/moment/fayette.htm

Where? There was NO link to any local website in your original post...
Maybe if you had your brain in, you would have noticed that!

> Of those 700 how many are actually in use or
> All of them are in use!!
>

OK, 25% of them belong to Fast Food.. Yippy...

Of those 700, how many are duplicates? Looks to be at least 50% to 60%!
You have 49 listings for 33.700MHz alone! That's NOT 49 frequencies, that
is ONE! It doesn't matter how many different things use that same
frequency, it is still only ONE frequency! You need to learn how to count!

> >
> > Another point to consider. A lot of the info in Police Call is made
> > up of USER CONTRIBUTED data. If you aren't happy with the number of
> > frequencies for your area, then why don't you contribute some of the

> all doubt :-)

Yup, and you just did... YOU have no clue once again. The FTC _DOESN'T WANT NEWSGROUP REPLIES_ that were meant to go _TO YOU_, they are looking for SPAM, not newsgroup replies directed towards you...

> https://rn.ftc.gov/pls/dod/wsolcq$.startup?Z_ORG_CODE=PU01
> "If you have a specific complaint about unsolicited commercial e-mail
> (spam), use the form below. You can forward spam directly to the

> fighter as well!! So please please send me your spam, I love wacking
morons
> for that $10,000.00 a pop fine....
>

Your not the only one, I send plenty to them every day... One thing I DO NOT do is use there email address improperly so that they receive newsgroup replies directed towards myself. They have enough email to sort through without having to wade through those meant for you that have nothing to do with their goal of SPAM fighting...

PH

1518. certainly the ice cream truck's frequency is public information?

Say, instead of months of patient scanning to construct one's local
frequency chart, why doesn't one march down to the government agency
in charge of licensing all those companies and agencies' frequencies,
and from each license record write down the assigned frequency and
base location.

Certainly the ice cream truck's two-way radio frequency is public
information? Or does one need a "Freedom of Information Act" request?

Because that would be assinine. You can get all this and more direct from
that agencies website. www.fcc.gov

You could try to send an email to ISP that hosts the remailer the
imposter is using. abuse@dizum.com @ URL www.dizum.com

Personally, I'd *never* post my real name or use an email address that
reveals my true identity when posting on USENET. It's too easy for someone
to track down your real address, phone # etc ... I've seen too many
stories like yours, and worse, of people getting harrassed to no end and
there wasn't a thing they could do about it.

In fact, I tracked down a person of your name in your state in less than
10 seconds. Is your middle inital "A"?

Whether or not this is you, the point is, be mindfull of the risks of using
your real identity online.

As for occasional posting of personal radio gear for sale, it seems
perfectly acceptable to me. In fact, I purchased a Drake R8 for
a great price this way not too long ago.

Good luck,
GS

Dan? Language please? Do you MIND?

1523. RELM RE2000 Alpha scanner (Red) My ISP calls this spamming. Sheesh, I'm only selling some "stuff"

Newsgroup: rec.radio.scanner
Date: 2003-06-03 00:43:25 UTC
From: NoSpamDanConti@RoadRunnah.com
Message-ID: <GBQAAQV237775.1128240741@Gilgamesh-frog.org>
Source record: 30252
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,alt.radio.pirate

This is the RE2000 Alpha scanner made by RELM. Same as the popular RELM HS200 scanner, but these will do Alpha tagging, and are PC programmable. Mint condition, in box with manual, accessories. Also includes custom soft-leather case, programming software, and cable.

$200.00 shipped via UPS ground, insured.

I will accept PAYPAL, Postal money order, bank / cashier's check, or personal check. (Personal check will delay shipping until it clears).

eBay feedback under OFFDAN.

E-mail if interested.

Dan dconti@nj.rr.com

1524. ALINCO DJ-X3 "E" Receiver My ISP calls this spamming. Sheesh, I'm only selling some "stuff"

Newsgroup: rec.radio.scanner
Date: 2003-06-03 00:43:25 UTC

I am selling the newly released ALINCO DJ-X3 "E" version wide band
communications receiver. This is the European version offering uncut
coverage from 0.1 MHz - 1300 MHz. This radio is brand new in the box,
never
used, plastic still on display. This little gem offers many features too
numerous to mention here. You can check my eBay feedback under OFFDAN, and
I can also supply photos of the radio, or answer any questions you may have
regarding the radio VIA E-MAIL!

$250.00 shipped, NO TRADES, NO C.O.D.

I will accept a US Postal Money Order , or PAYPAL.
I will also accept a check, but will wait until it clears before shipping.

Again, if you are interested, or have questions, e-mail me and I will be
happy to respond.

I have an absolute MINT Uniden 210 XL base, programmable scanner for sale. This scanner does not have a mark, scratch or scuff on it, works perfectly. Excellent for a scanner collector or someone looking for the quality afforded in these older base units.

I have no idea what it is worth, so I will entertain serious, reasonable offers, and ask for an extra 10 bucks to ship it via US Postal, Priority mail.

I will accept a US Postal money order or PAYPAL only. If you must, a personal check is OK, but shipping will be delayed until the check clears. NO C.O.D.

ebAy feedback under OFFDAN. NO TRADES.

E-mail if interested, or with your offer.

Dan dconti@nj.rr.com

1545. Kenwood TK 805 D UHF 16 CH - Price reduction My ISP calls this spamming. Sheesh, I'm only selling some "stuff"

Will try this one more time with a price reduction before it's off to eBay...

I am selling a KENWOOD TK 805 D UHF 16 channel scanning mobile radio. This radio will do the 440 amateur band up through 470.
It is TOTALLY field programmable. No cables or software needed to program it. Commercial grade quality and audio in a nice small size. This radios are no longer made, and becoming hard to find. If you would like a picture, let me know and I will e-mail one to you. This one is in Excellent condition, like new, with microphone, cables, mounting bracket, etc. I will
also include copies of the programming instructions.
You can check out my feedback on eBay, under OFFDAN.

$175.00, plus $10.00 to cover USPS Priority Mail, and insurance.

I will accept a US Postal money order, or a check. A check will delay shipment until it clears. I also can accept PAYPAL.

E-mail if interested.

I will try this one more time, reduce the price for the package, and then
it's off to eBay if NO takers...

I am selling my YAESU FT-50 dual band (440 - 2M) hand held radio. The
radio
is in Excellent condition. Non-smoker. This radio has been modified for
out of band TX. Package also includes the rubber "gasket case", NC-50
rapid
drop in charger, FBA-15 AA battery case, FNB-41 600 mAh battery, MAHA
FNB-V47 1800 mAh battery, and MAHA FNB-40 650 mAh thin battery. All
batteries and the AA case have the optional SPRING belt clip. Also
includes
the ADMS-1E programming software and cable for the FT-50.

I am asking $260.00 for the package, shipped via USPS Priority Mail,
insured.

I can accept PAYPAL, a US Postal money order, or check. Personal check
will
delay shipping until it clears.

You can check my eBay feedback under OFFDAN.

E-mail if interested.

1550. BAD GUY ALERT! - Steven A. Giron AD6GO

Newsgroup: rec.radio.scanner
Date: 2003-06-03 00:43:28 UTC
From: NoSpamDanConti@RoadRunnah.com
Message-ID: <3ATNY6XC37775.1128356481@Gilgamesh-frog.org>
Source record: 30279
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.misc,alt.radio.scanner,alt.radio.pirate

Be advised that Steven A. Giron, AD6GO, and EXTRA class radio amateur, (so much for the integrity of this hobby), entered into an agreement with me to sell some radio equipment for an agreed price. I promptly sent him a PAYPAL
payment.

Since that time, he has not responded to the receipt of the money, nor has he answered my numerous e-mail inquiries on this matter. Of course, to date
the equipment has not been received.

Steve is listed as residing at 11609 Nova Street, Santa Fe Springs, CA 90670. He did not provide a telephone number, nor is there one listed for him.

I will take the necessary steps with PAYPAL in an attempt to retrieve my money, but this is not gauranteed.

I have been buying and selling on the groups and eBay for many years, and am
usually very cautious, and to date, after hundreds of transactions, have never been burned - until now.
I dealt with Steve in the past, and he was fine. Also, I always thought that being an EXTRA class ham included some integrity as well. I guess not.
Additionally, his eBay feedback is good except for two neutral ratings relative to his lack of communication. So much for eBay feedback.

This is a warning NOT to deal with Steve. If anyone knows Steve, or can contact him on my behalf, I would like to speak with him on this matter.

Dan dconti@nj.rr.com

1551. Motorola Leather cases for GP68 radios My ISP calls this spamming. Sheesh, I'm only selling some "stuff"

I am selling an absolute like new KENWOOD TK-805D 16 ch UHF mobile radio.
This one is field programmable and does not require any cables or software
to program.
It will do the 440 amateur band up into the 500's with no problem. Scans
16
channels, and excellent audio in a very compact unit. Includes power
cables, microphone, and mounting bracket. It's a beauty and getting harder
and harder to find.

$200.00 shipped via USPS Priority Mail, insured.

No C.O.D., No trades.

US Postal money order, check or PAYPAL. Personal check will delay shipping
until it clears.

You can check my eBay feedback under : OFFDAN

E-mail if interested.

OK - for what it's worth, how do you know he's not on vacation? Inconsiderate, sure, if he has an auction going, but who knows? Maybe he's in the hospital, out of town on work (I've had that problem before), going through a divorce, moving, dead, etc etc etc.

If his feedback rating's generally good, be patient. It'll probably work out ok.

<a lot snipped out>

First of all, if you dealt with him before and he was ok, maybe he is ill or in hospital! Ebay ratings aren't the final word in one's honesty. I wish I had a dime for everyone suckered into that false sense of security.

As to the "integrity" of the hobby of amateur radio due to a bad deal. It is disgusting to me that some one would look upon every one involved in a "group" for the actions of one - regardless of who they may be...(not implicating the one this thread originally alleged to have committed an offense). ALL GROUPS have their share of bad apples. Ham Radio is not as it once was. It isn't the "fraternity". Times have changed for ALL. When an exam is administered for a license, we examiners - do NOT give them Psychological or Lie Detector Tests, nor do we look into a crystal ball to see if they shalt steal. In short, the Ham Hobby has little to do with one's honesty. No more than a "CBer", "Scanner Enthusiast", "Motorcylce Rider" or one of a multitude of other hobbies. WE don't know they're the future thieves of America, whoever they may be. So tell me, what group do you come from, to assume such about ALL Hams, especially those of Extra Class, of which I am proudly one of??????? Is YOUR "group" sin and error free?????

I think you need to lighten up on the ratings you're using - especially with the broad paint brush. Perhaps give the guy with an otherwise spotless record according to your own statements - another opportunity to make good. Try contacting him via phone or snail mail. Maybe his ISP or perhaps his own computer crashed! LOTS of possibilities.... If all else fails, contact the Police department in YOUR area, to file a charge to the police in HIS area to get a file started. Maybe they can shake him loose IF he is willfully trying to hide. L.

I'm pretty certain that this is not Dan Conti. He would not use FROG, and even if he did, what would be the point if he listed his real ISP in the e-mail address? This is obvious forgery.

gotta think about this for a while, there is a problem getting on here and telling a bunch of stuff on someone that it has been less than 60 days from the date you last contacted him, and you can also take it to small claims court and get a lean on his income and stuff.
right now i know of two people, i should say i read on a web site where two people are suing others for doing this very thing, and they are suing for slander and ... i cant remember exactly what the other was, but from what i have found out from asking the local law enforcement, slander can carry some , shall we say, long term effects, like he can sue you for millions, so i agree with the last guy, give it some time, and call the local police in his area, and have them do a welfare check on him, you might just save his life......

my two cents....

73's!
Ken.

Apparently your efforts a month or so ago have finally paid off
in some way and the twit who complained may well have been
notified that the complaint was inappropriate... or something
to that effect.

Whatever happened, it seems to have annoyed the little twit even
more!

The flood of recent FS messages from "Dan Conti" are forgeries.

Someone is copying every FS message Dan has ever posted, and they're sending them all at once in the hopes of annoying Dan, and everyone else who uses these news groups.

Looking at the groups they're cross posted to, and the services used to post the messages, it's easy to see they share much in common with the forged Q and Stagger Lee posts of a few weeks ago.

For information about who the imposter is see:

Yeah. It's Fred Hambrecht, one of the many morons in my list. He thought whining to my ISP about using foul langauge in this group would get me booted or something silly like that. It didn't work. Perhaps he's been enraged so much by this fact that he has gone off the deep end.

--
The following is a list of morons.
That's all. Just morons. Doesn't matter
what they've done or what they said,
it's all been equally moronic.

The moron list:

The top moron in any group on Usenet is Gandalf Grey - gandalfgrey@infectedmail.com - alt.current-events.clinton.whitewater (Yes Hanson. I do post your name in every one of my posts and now you're at the top)

Bush Busta / A.K.A Jim Kennemur - BushBusta@America.com - alt.current-events.clinton.whitewater (Usually giving Gandalf the reach around)
banjocat - banjocat@bellsouth.net - alt.current-events.clinton.whitewater (Fuck you and you threats)
Gary Roselles - rosell19@enetis.net - alt.current-events.clinton.whitewater (Escapee from Rapid City Regional Hospital's psychiatric unit)
Dr. Fred Hambrecht Sr - w4jle@charter.net - rec.radio.scanner (Threatened to tell my ISP cuz I was cussin' on Usenet. Didn't work. He's also Stagger Lee & "Q")
Al Patrick - arp@inet4u.com - rec.radio.shortwave (Thinks God kills people for listening to Rock & Roll. He's also a known Jew hater.)
Usenet User - pkeller@mil.edu - rec.radio.scanner
Jon Van Allen - kf7yn@qwest.net - rec.radio.scanner
MnMikew - MNMiikkeW@aol.com - rec.radio.scanner
Lou Scannon - scannon@lmountain.com - alt.current-events.clinton.whitewater
Steve Hiner - shiner@tampabay.rr.com - alt.current-events.clinton.whitewater
ad lib - leedesi56@yahoo.com - alt.current-events.clinton.whitewater
TW. - tandb80@comcast.net - rec.radio.scanner
Never anonymous Bud - thekat@san.rr.com - rec.radio.scanner
John T. Kennedy - jtk3@no-treason.com - alt.current-events.clinton.whitewater

Words written by someone else. I didn't write those words. Instead, I replied to an existing thread with that subject line already in place. Again, my message said nothing about the Dixie Chicks or Bush.

He must not have noticed that, Ed. Probably a simple mistake. We all make
them at one time or another.

> need a "Freedom of Information Act" request?

The FCC certainly provides much of this type of information, Dan. However, it is not always that easy. Some companies operate under a license leased from another company. For example, many companies in this area operate on frequencies licensed by a communications company. That communications company then leases these frequencies to local businesses. At that point, the only way to find a frequency used by a specific company is to search through the frequencies licensed to the larger communications company.

Something similar happens on the government frequencies. A town or county obtains a license for many frequencies, with many local government agencies using those frequencies. An FCC search would give you the frequencies licensed to the town or county, but only a search of those frequencies would reveal a specific agency's frequency.

In other words, raw data from the FCC might give a head start in your search for that ice cream truck's frequency, but more effort will probably be needed to end the search. A local frequency list helps others avoid that effort.

I agree this is an odd, not very well thought out, piece of legislation. The information (radio frequencies) is widely available and nothing in the legislation would prevent that. What might happen instead is additional stigma attached to scanner enthusiasts by associating our activities (distributing frequency lists and so on) to terrorism in this country.

Hey Dan...this is the same identical email you posted about this guy
back in October of 2002. Over on radiocentral.org -- are you still
trying to find him?

AD6GO was on Echolink on May 31st, claiming to be from DM13 and Orange
County. Claimed a zip code of 95916. The address you left here is in
Los Angeles County. Call the LA county assessor office and find out
who owns the property. Then call the Orange Co assessor and just ask
them if they show any property in AD6GO's name and address. Then go
to the library, get a book called The Haines Criss Cross, look up his
Orange County address and call one of his neighbors, have them take
the guy a message to call you.

Oh one other thing. Steve is an active member of the CARA Catalina
Amateur Repeater Association and even has an article about eQSL's in
the December issue of their newsletter.

http://www.cara-net.us/Ragchewers/2002/rc1202.pdf

Maybe you can contact him through the club.

IF you are having that many problems with your ISP why would you bother bitching to us about it.

Just change ISP's and get over it.

As you can see, I don't believe in cross posting to groups that really don't want off topic BS like this one.

I wonder how this would affect volunteer fire fighters that need the
frequencies to porgram into their radios.

Man, can you guys read headers? All this stuff is forged by some
nitwit using some other nitwit's anon re-mailer. Just kill-file him, it
won't affect your ability to get the real Dan.

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

Sorry about the crosspost. If you respond, please leave rec.radio.cb
in it so I don't have to subscribe to all the groups. <;

You may also email me, change bomb to com.

My BP-180 battery pack has bit the dust. This fits the Pro-90,
Uniden 235 and 245. I want to rebuild the pack with Energizer
NiMH 1850 mAh batteries. Has anyone done this? Are these batteries
too big to charge in the radio? Can this brand accept solder?
I've had Nicads that can't be soldered to before. Thanks.

Scott, somewhere around Baltimore, MD.

You still didn't tell us which one of those YOU work at.

> No dup's I can see althought I do see some companies use the same frequ in
> several places.

You're too stupid for words.

412 unique frequencies / 789 records listed is 52% leaving the other 48% as
duplicate frequencies.

> Well they could have at least had our local police frequ's in it D'oh not
a
> one

Says you. I found several listings for Fayette County Sheriff on the CD. Who
dispatches for your PD? Your "informative" website doesn't say. Your
"informative" website doesn't even say what service these frequencies are
(police, fire, etc). Makes it much like everything else on your site - a
waste of time. Looking at your site, I would have no idea who dispatches
your police department, but with Police Call I would have a good starting
point, if nothing more.

>
> The only thing coming out of this news group like all the others is spam

So you expect us to believe you work for the FTC? I'm sure you can prove
this claim by posting a valid address that we can send email to you at work.
Since you claim to be collecting spam I'm sure this will not be a problem.

>And just to show you lets just fill up your hotmail
> account OK <A HREF="mailto:Power__House@hotmail.com"> Power House's E-Mail

"That other George" says he works for the FTC.

This is their regional field office for that part of the country.

East Central Region
Federal Trade Commission
1111 Superior Avenue, Suite 200
Cleveland, OH 44114-2507

So not only are we to believe he works for the FTC, we also are supposed to believe this goober commutes from Fayette PA to Cleveland every day - a distance of roughly 195 miles EACH WAY.

ROTLFMAO!!!!!!!!!!

I just spoke with the REAL Dan Conti.

This is not him posting. He is devastated at what has been done to him.

He is afraid to post here or anywhere else for fear that whatever he posts
will be re-posted one million times on the groups. He simple now lurks.

Dan has a habit of getting on one's nerves now and again, but he is always
fair, rarely curses, and interested in a good deabte and the views of
others.
Also, the equipment he sells is always better then described.

Like him or hate him, he didn't deserve what is being done to him here.

This -is- reprehensible. Anybody ever confirm the ID somebody made
awhile back when this guy was doing "Q" and "Stagger Lee" and
supposedly left his own e-mail address in a post? Was that accurate?
It was a ham call sign @ a service provider, but I don't know if it
was true or not.

I live in the same town as the REAL Dan, and we have the same ISP.

What bothers Dan the most about this fiasco is that he ALWAYS used to berate others for posting anonymously. Many of you know that anonymous posters would BURN his butt!

Now, he is paying the price of his honesty. He has informed me that he will be back on the groups, anonymously, with an new e-mail address, and will remain quiet for the most part.

This should please many of you. Personally, I enjoyed his comments and debates.

Wilson

Agree 100% Dan is a gentleman.

I strongly suspect the guy who
is using his name is the same whackjob
who was mass-posting in the radio
newsgroups several other names
over the past two months.

I always enjoy a good debate.. who wants mindless followers? :)

Dan, don't let this asshole get to you... just like it says in my sig. Stay out here in the open with the rest of us that are unafraid to let people know who we are, and have the convictions of our beliefs...

Take care, and stay well. :)

Not only do you have the same ISP, you both have the same IP address. Now that's impossible unless you're sharing an account.

Now I thought it was pretty screwed up what was happening, but when the so called victim, which is you, starts playing stupid games like the person that's spamming, then I can't say anyone is to blame but yourself.

No way to be too sure on that one. The email address that was posted,
w4jle@charter.net, supposedly belongs to a Dr. Fred Hambrecht Sr

Since Mr. Hambrecht hasn't come foward to claim his innocence, there's no
real way to tell if it is him or not.

Afraid not. Both Dan and Wilson's messages originate from 24.168.140.228
through Giganews. It's the same process which my ISP, Comcast uses and does
post the senders own IP address.

If they're both using a dialup, and calling the same phone number, I think they could end up with the same IP address - though not at the same time.

What was the same, is significant.

>"The Moron List" <x@x.net> wrote:
...
>> From: "Big Wilson" <wilson4345@aol.com>
>> X-Newsreader: Microsoft Outlook Express 6.00.2800.1158
>> X-MimeOLE: Produced By Microsoft MimeOLE V6.00.2800.1165

This is interesting, because if it were different it would likely
mean different computers. That fact that it is the same doesn't
mean much, but does add weight to it.

>> NNTP-Posting-Host: 24.168.140.228

That is the IP address of the individual network interface that
sent the message to the news server.

>> X-Trace: twister.nyc.rr.com 1054687777 24.168.140.228 (Tue, 03 Jun 2003

There it is, repeated again. These are both inserted by the
news server and cannot be forged by the person posting the message
in an effort to hide where it came from.

Okay? Now lets look at the other message and compare appropriate
headers.

>> From: "Dan Conti" <dconti@nj.rr.com>
...
>> X-Newsreader: Microsoft Outlook Express 6.00.2800.1158
>> X-MIMEOLE: Produced By Microsoft MimeOLE V6.00.2800.1165

This person uses *exactly* the save version of Outlook Express.
Interesting, but not definitive.

>> NNTP-Posting-Host: 24.168.140.228
...
>> X-Trace: twister.nyc.rr.com 1054584209 24.168.140.228 (Mon, 02 Jun 2003

The news server says the IP packets it received came from the
exact same network interface. That *is* definitive.

The only possibilities are 1) the same computer sent both
messages, or 2) that there are two people using _dialup_ access
and just happened to hit the same modem at the ISP. We can
check that fairly easily, by simply looking at several messages
from the real "Dan Conti" to see if they are each different
(indicating a dialup modem), or all the same (indicating he has
a DSL or cable modem that always uses the same IP address).

Guess what. He's been using one and only one IP address since
March 2002 (he has upgraded his version of Outlook Express since
then, and his IP address was last changed in Feb 2002).

Here are headers from the oldest message I found with that
IP address originating from "Dan Conti".

Message-ID: <olUf8.22857$in3.5343151@typhoon.nyc.rr.com>
Date: Fri, 01 Mar 2002 23:42:12 GMT
NNTP-Posting-Host: 24.168.140.228

Here is a message one year later (and nothing in between was
any different):

Message-ID: <Oc98a.55779$ma2.16023985@twister.nyc.rr.com>
Date: Sat, 01 Mar 2003 21:01:34 GMT
NNTP-Posting-Host: 24.168.140.228

And of course three months later in June we see not just "Dan Conti"
posting from that IP address, but also "Big Wilson".

Make no mistake, it came from the same computer. Want to bet it
was the same fingers typing?

As has been REPEATEDLY posted on this and other NGs, this is not Dan posting these ads, it somebody trying to smear Dan. Dan doesn't use an anonymous remailer when he posts. In fact, due to these posts being made in his name, he is not posting at all. Don't blame Dan, and check the email properties of any message before replying, either on the NG or direct.

Fine, so it's Dan trying to do something to clear his name.. I'm still
positive that Dan did not post all that spam from FROG.

I thought I had talked with him off group before and he was a nice guy.
I was wondering what was going on here but didn't want to add to the mess.

Brenda Ann hit the nail on the head with this issue. Think about what was done to Dan, and the potential for it to continue against him. Sometimes "Dopey Games" come in response to "Dopey Games" None of it AT ALL being condoned.

I think in light of what has happened, it's best to just let this go now.

;)

Have you ever heard of a branch office? The regional or state offices of many government agencies are located well away from my town, but many have branch offices here. Perhaps the same is true in George's town.

As others have pointed out, the many messages appear not be written by Dan Conti. The messages are not even coming from the server he routinely uses. More likely, these messages were posted by someone using Dan's name in the message header. The likely goal is to harass Dan by turning others in this newsgroup against him. The regular readers of this newsgroup will not likely be fooled by such tactics. Hopefully, others will not be fooled either.

I don't know. The others in this thread may be right when they say this legislation will have no effect on scanner users and others. Only time will tell how this actually plays out.

I'm trying to do a favor for a local Ham, Al - NX2Q and assist him in selling his rig. he does not have access to a computer.

He has an ICOM 736 HF rig, 100 Watts on HF and 6 meters, auton antenna tuner and power supply built in, with optional CW riddi filter, and 250 Khz narrow CW filter, in original box with manuals...

He is asking $1500.00 for the radio.

Anyone interested in the deal can E-Mail me and I will put you in contact with Al where you can finalize your business. i can also assist in the transaction if necessary.

I get burned a bit as well for posting anonymously. Allow me to offer the real Dan a big "I told you so".
There is absolutely nothing wrong posting with a phony name and address, and quite the opposite, it's just good sense. What with spambots automatically harvesting email addresses, using your good address is asking for lot's of aggravation. Ask the "real" Dan Conti.

and you calling some one else stupid!! If you could read you would see the
same frequ is used in 2 to 4 area, thats because we have hills here or they
are used inside with 2 waats so the same company may have the same frequ
list 2 3 4 times because of that. If you had looked at the list and read it
you would know that. But with your 10 IQ thats to had on your brain...

>
>> Well they could have at least had our local police frequ's in it D'oh

> CD.

The sheriff does nothing more then stand in the court house and look at
people comming and going, and they run the county jail. They are not our
local police force and have no police duties in this county.. Infact fire,
EMS, local Police and State Police all come out of our local 911 center
800MHz and it's all trunked. The Mr. Scanner CD has it all listed as 911
because thats what it is D'oh.

>Who dispatches for your PD? Your "informative" website doesn't

> have no idea who dispatches your police department, but with Police
> Call I would have a good starting point, if nothing more.

No you wouldn't, our local police is not liste on Police Call... It's a trunked 860MHz frequ I belive it say 911 after it on the Mr. Scanner CD and it also has all the Trunking info, i.e. fleet map, talk group, frequ. But my post did not ask for any comment it was a statement of fact, i.e. don't waste your $20.00 on Police Call if your looking for radio frequ's spend your $20.00 on Mr. Scanner. Or better yet spend $30.00 and join the Bearcat club and get a bunch of CD's and magazines, You sound like a Betty Bearcat Frequency kind of guy to me...

That's a point if you're limited to only one good address. I can have as
many as seven on my account. I use one good address just for usenet posts.
I figured I'd change it when my mailbox got overwhelemed with spam, but so
far I get only about one piece of junk mail a day on it. I get more from
the e-mail address I use for online shopping and e-bay and such.

NiMh batteries draw more power from their chargers as they
"refill" then NiCad batteries. It's possible your radio's chargingcircuits
burn out when charging NiMh batteries. Rebuilding a pack with
NiCads with solderlips should not be a problem.

Hope your problem is solved sone.

1773. Help!! Edmonton Fleetmap for E-D electronics

Newsgroup: rec.radio.scanner
Date: 2003-06-04 16:24:58 UTC
From: Guido <guido@no.net>
Message-ID: <3EDE1D59.30609@no.net>
Source record: 30003
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I have been monitoring the 800mhz trunking liscenced to E-D Electronics in Edmonton but I am not sure what the correct fleetmap for this system is. It sounds like it is a Type I Hybrid system because of how the control channel sounds but I could be wrong. When I got my BC250D the system was already programmed into the radio and the fleetmap was set to custom with every block assigned to size 2. I am not sure if this is correct because that would imply that it is a Type I system only.

Does anyone have any really accurate information about this system.

Any and all help would be appreciated!

None of the stores have nicads anymore, only NiMh.

Thanks. I'm going to cycle the new batteries a few times before I make the
pack, so the batteries can reach their full potential.

It sure would be nice if someone would design an alkaline holder
for that radio. They could just put a series diode or two to drop
the voltage and keep them from charging. Of course, the diode(s)
would go, and NiMh's put in their place. <;

If only I had some really large shrink wrap...

1780. [FA] AOR 8200MkII hand held scanner + EXTRAS = COMPLETE KIT!!!!

NiCd chargers charge until the voltage stops rising *and then falls a
small amount*. NiMH batteries don't exhibit that final dip in voltage;
their voltage plateaus. So the average NiCd charger can be expected to
grossly overcharge NiMH batteries.

You done putting your antennas up yet? That is funny. When we first seen your list you only had about 3 antennas up. Now that you are trying to con George out of $5000 I see you have put up some more antennas. Funny, the other month they weren't there.... They weren't there when you started bragging about the list last year either and I have the pictures to prove it....

Some of those antennas look like they will blow down during the first real wind....

It is a generally recognized convention that any series of posts which exceeds a Breidbart Index of 20 is net abuse (spam) and can be acted upon by the spam cancel bots. This morning, the forger from Frog posted 47 items which were crossposted to five news groups, leading to a BI of 34 (5 times the square root of 47).

The matter has been brought to the attention of the appropriate cancel bot operators.

Oh please - she's not going to jail! Rich people don't go to JAIL in this country, they simply take long vacations at Club Fed, sipping on perrier and watching cable tv all day long whilst they serve out their "sentence" which usually consists of 6 months or less at the Federal Minimum Security Vacation Resort followed by 2 years of unsupervised probation and a $50K fine (which to a multimillionaire like "poor" Martha is the equivalent of a parking ticket).

I have no pity! She's already stinking filthy rich and she scams 200K out of a shady stock deal and gets caught, and I'm supposed to feel *SORRY* for her? Yeah I feel REAL sorry for some millionaire bitch who scammed 200K from everyday people investing for their retirement. I hope each and every investor she helped SCAM sues her sorry ass into oblivion. Now THAT would be JUSTICE SERVED.

Free Martha.... bullshit!

1787. better VHF antenna for DJ-X2000

Newsgroup: rec.radio.scanner
Date: 2003-06-04 22:38:06 UTC
From: Vic <bogus@nospam.com>
Message-ID: <5quDa.318$DD2.33@fe05.atl2.webusenet.com>
Source record: 30016

Recently purchased a DJ-X2000T. Was disappointed with a number of things as I compared it to a AR8000 but to be fair, some things
were better ... like AM (SW) broadcast reception! Also, some of the extra features, like the frequency counter. It's great to have
if you are a radio amateur operator!

VHF reception however left something to be desired. I wondered, was the poor performance due to the radio, or antenna? When
connected to an external 2M HAM antenna the VHF performance appeared to be good, albeit there was more background noise (white
noise) than I'd like to hear; S-meter readings looked good. So I figured the stock 2000 antenna might be the reason for poor VHF
performance (I did NOT check UHF). Decided to rummage around and found the antenna I used on the AR8000 to improve VHF-UHF
performance. Tried it on the 2000 and voila, VHF reception IMPROVED significantly. SW broadcast MIGHT have been a LITTLE adversely
affected, but frankly it was that hard to tell.

The antenna if anyone is interested:
It's similar in size to the stock antenna (1.5mm longer) 1/16"
It has a chrome BNC connector, the rest of the antenna is black
It has a loading coil which is about the same diameter but approx. 13mm shorter (1/2")
The flexible 'antenna' is just slightly larger in diameter
It's from an Icom IC-W2A handheld transceiver, antenna model # FA-1443B
(Icom may have used it on various models)

If you want noticeably improved VHF reception and want an antenna very similar to the stock one, buy the ICOM FA-1443B.

All the best
Vic

Rob, unfortunately, you are looking at buying a new scanner for this. The BC250D is the only one out right now that does digital, and you're looking at about a $700 investment to get one (with the optional digital card). I have one and absolutely love it, but it's definitely way beyond people who are new to the hobby.

RadioShack is coming out with a digital variant on the PRO-95 for about 200 bucks less than the 250D that will do 9600 and 3600 Baud APCO-25 without an optional card. I have the PRO-95 also and like it - it took some getting used to but once you do it's a great little performer. A digital version of it would be fantastic.

My personal recommendation is to wait and see what people here think of the new RS unit before making a decision. Also check around with other scanner listeners in your area to see if the BC250 is even compatible with your PD's system - it may or it may not.

In the meanwhile, try searching the 450 band for news agencies in your area. They are a great source of info for what's going on in your area - almost as good as PD dispatch itself.

1801. MilAir VHF/UHF Logs from Ft. Lauderdale/Hollywood, FL trip

Newsgroup: rec.radio.scanner
Date: 2003-06-05 01:45:33 UTC
From: GeorgeF <av8tor@licensed4fun.com>
Message-ID: <3EDEA0BD.701@licensed4fun.com>
Source record: 30029

Tuesday morning I left for a fishing trip to Hollywood, FL and returned Wed. evening.

Below you'll see my logs for which I hard comms on during the two-day trip. Since I was either driving or fishing I didn't always have a chance to write down callsigns or times. However the freqs do provide a good resource for active Military comms for others either traveling to or who live in the Ft. Lauderdale, FL area.

I remember reading that Robert Wyman mentioned in Monitoring Times that Coast Guard comms were nearly all encrypted where he lives. If Iï¿½m not mistaken he lives in this general area. I did hear one USCG encrypted comm on Tuesday evening. I didnï¿½t catch the Call Sign of the USCG asset, they were in communication (non encrypted) with Group Miami on 157.050. Then the asset requested Group Miami to go ï¿½greenï¿½ (encrypted). Throughout the rest of Tuesday and Wednesday I did hear USCG comms in the clear. Robert, if youï¿½re reading, has the USCG relaxed the use of encrypted comms since your report? Or wasnï¿½t I in the correct area? Just as a note, here in Daytona Beach our Ponce Inlet Coast Guard Station is still nearly 100% encrypted.

As many of you might remember two weeks ago I was in Tampa which had tons of USCG comms (nearly all in the clear). While in Ft. Lauderdale I heard a lot of USCG comms but just not as much as in Tampa.

As far as fishing went, I did better 2 weeks ago in Tampa however still was able to bring home enough Spanish Mackerel for a few mealsï¿½

The MilAirComms.com Log report for 6/3/2003
All times are Eastern Time, frequencies in MHz and
unless other wise noted modulation type is AM.

unid
Time: sound like ACM
Frequency: 234.6000 (NORAD)

unid
Time:
Frequency: 383.4000 (TSCC - Jacksonville - P3's ??)

unid (probably MAKO's or SHARKS's)
Time: Sounds like a lot of activity in Avon Park area.
Frequency: 285.7250 (Avon Park); 292.2000 (Avon Park); 307.1000 (Miami Cntr); 138.1250 (Air-Air) 138.1250 (Air-Air)

Coast Guard ?
Time: Asking about warning areas, very weak signal, couldn't make

out what warning area he was refering to.
Frequency: 344.2000 (NAS KeyWest ??)

MAKO 11 Flt of 2
Time:
Frequency: 281.5000 (Miami Cntr)

Time:
Frequency: 303.1500 (Homestead Command Post)

Coast Guard ?
Time:
Frequency: 381.8000 (USCG); 157.1500 FM (USCG 23A)

Time: encrypted comms, very active in the Ft. Lauderdale area
Frequency: 169.4500 FM (US Customs)

Time: most comms in the clear, also very active in the Ft.
Lauderdale area
Frequency: 165.2375 FM(US Customs Repeater)

Coast Guard ?
Time: in the clear comms, then asset requested Group Miami to go
"green"
Frequency: 157.0500 FM (US Coast Guard)

Coast Guard 2131
Time:
Frequency: 381.8000 (US Coast Guard)

Ahhhh...my cousin (rich yacht-owning bastard! ;)) introduced me to king mackerel fishing off Sebastian. That was definitely my type of thing: set up the down-rigger, open a cold beer, wait. Fish hits, crank on that big crank-thing, land fish, repeat. Time to quit when the beers lead to confusion between the big macs and barracuda....

> grossly overcharge NiMH batteries.

(And another poster raised this concern.)

That may not be an issue in this case. I have two Uniden radios that use the BP-180 battery pack. Both are SC180B scanners that I bought on clearance from Best Buy, and neither came with the power adapter. From the operating guide that I downloaded, I know that the proper power adapter is the AD-70U power adapter, which is supposed to supply 300 mA at 12 volts DC. Since the battery pack supplies 4.8 volts DC, I suspect that there is an internal voltage regulator in the scanner that controls the voltage supplied to the battery pack as the cells charge. I believe the same circuitry exist in the other Uniden radios that use this battery pack.

I use a 9 volt DC power adapter that came from a telephone answering machine. I'm sure I scavenged it from the trash.

Does Uniden supply a NiMH battery pack intended to replace the BP-180? If so, and if Uniden does not recommend a different power adapter, I would feel safe in using NiMH cells in my SC180B. Interested listers may want to connect a voltmeter and ammeter to their scanner and see what happens as they charge up a NiMH battery pack.

Best wishes.

The only reason I responded at all was because your message seemed directed at the other readers here (myself included), not George. For example, you said George "says he works for the FTC." Later, you added, "So not only are we to believe he works for the FTC, we also are supposed to believe this goober commutes..." At that point, I simply responded that a distant regional field office does not rule out the possibility of a local branch office. In other words, I offered one possible explanation.

Does this mean that ads for TV stations would be illegal??

I thought of the exact same thing when I saw the subject line. Based on the comments here, I would say the commercial was effective. However, to be honest, I don't remember what they were advertising so it obviously wasn't that effective. By the way, no checks accepted here either. :)

No, there was a www.scantulsa.com. It was sort of a local gab session but
wasn't real active (actually it was next to dead).
I hadn't checked it out for the last few months, guess they canned it.

<th@t.other.george.sucks.com> wrote:

You sound like you might not like the woman.
And you might not even know her.
You sound like you didn't like her before she took advantage
of all the information she had available before making investment
choices.
Many people dislike successful people; and a successful woman
is easily disliked by such people.
You sound like that you think when she heard her stock was
going south that she should have done what you would have done...you
would have put your fingers in your ears and said, "No! No! Don't
tell me that! I am not supposed to know that! I must leave my
investments where they are."
I bet you would have done that and I would say then that you
were a very honorable fellow...a little dim, but honorable.
When she sold her stock, she got what it was worth on the
street...she hardly ripped anyone off...anyone.
Thinking she should have let her investment go down when
knowing it would, shows a little unrealistic thinking on your part.
She isn't perfect but she enjoyed presenting the appearance
that she almost was. This is what makes so many people happy if she
is punished.
A previous first-lady didn't sell her "stock" based on inside
trading information; she "bought" the stock based on that information
and she held it only long enough to get the previously-known higher
yields and then sold it. Martha Perfect invested for capital gains and
was taking the risks along with other investors...and then she heard
she should get out. She did.
Who did it actually cost money?
The people who bought on the expectations that they would make
money on their investment. They didn't. Martha did not make the
stock go down.
Under the circumstances of investing, when my money man calls
me and says, "Ken, the talk on the street is that we ought to dump
your XYZ stock," I do not ask where he got his information, and I do
not say, "OH, Gee...I don't know if I should do this. What if all
those other people holding XYZ stock doesn't hear about this? No, I
will just wait until it goes down so my stock will be worth less and I
will be like all those other people."
Yeah, that is what I would do.

Ken Cashion, who thinks you are stupid.

Many of us don't care about Martha Stewart and her success one way or
the other. Doesn't mean that we think she should slide on this
(assuming that there is sufficient evidence to proceed and I have
heard nothing but ranting to the contrary).

[...]

> When she sold her stock, she got what it was worth on the
>street...she hardly ripped anyone off...anyone.

Where did the money come from? If Martha did what she is alleged to
have done, there came a day when she had at least tens of thousands of
dollars that she would not have had if she hadn't broken the law.
Where did the money come from? Perhaps there is a principle here
which can be put to use to retire the national debt.

> Thinking she should have let her investment go down when
>knowing it would, shows a little unrealistic thinking on your part.

Do you think so? Here's a woman who was worth, at the time, maybe
$500 million engaging in a patently illegal act (allegedly) in order
to avoid losing what amounts to chump change.

[...]

> Yeah, that is what I would do.

It's not illegal to buy or sell stock based on rumors. If it's "the talk on the street," it's not inside information. If the "talk" is an opinion based on analysis of publicly available information, it's not inside information -- it's good financial advise. If you engage the services of your "money man" because he can give you good financial advise, you are wise. If you engage his services because you believe he is piped into information that is not publicly available -- information that is available only to what are considered insiders -- you are a criminal. Your choice.

So, an alternative hypothetical. Your "money man" calls you up and says that you should sell some stock you own because tomorrow some information will become public and the price of the stock will go down. You stand to lose about $2000. What do you do? Now, assume that you think there is a good chance that you will be arrested and incarcerated if you act on this information -- what do you do now?

>
> Ken Cashion, who thinks you are stupid.

Stupid for what reason? Stupid for believing that people should obey the law or pay the price even when it's very very tempting to not obey the law?* Stupid for not believing that money can be manufactured out of thin air by insider trading? That would be great if it could. Better than turning lead into gold (you don't even need any lead to start with) but just as impossible.

Harold, who you probably think is stupid as well. I can live with that.

*There are laws and then there are laws.

I took some delight in seeing Martha Stewart pulled down off her high horse in the beginning, but this has gone way too far!

I believe that Ms. Stewart made a mistake and, if so, she should have to make restitution, pay a fine, and apologize.

But, lets face it, the really BIG MISTAKE she made was in her TIMING.

Instead of nailing Ken Lay or Bernard Ebbers or any of those other GIGANTIC CROOKS, the government is trying to appease the public by nailing poor Martha for her pisant crime.

Maybe Ms. Stewart didn't contribute as much to the Republican Party as did Ken Lay.

Were there any morality in politics, someone in power would step-in and put a stop to this. Poor Martha acted like a big shot while calling on her cell phone in front of one of her friends on her private jet. I see hundreds of big shot assholes on their cell phones every day. Lock those idiots up and lighten up on Martha.

Regards,
John E. Golden

My guess is that will be the final resolution though she may end up
with some nominal jail time. I think a short jail term would be
appropriate -- assuming that she is found guilty. What I don't think
will happen is that she will be permitted to plead no contest and just
pay a fine. That would be inappropriate in my estimation and that has
nothing whatsoever to do with my feelings about Martha or others of
her "class" (as Mark Lane uses the word "class").

>

There is some validity in that, I suppose. Crimes of arrogance and
privilege have become more noticeable in the last couple years.

Your not the first to make the claim that contributing to the
Republican Party insulates people from criminal prosecution. Do you
have any justification for that? Do you have some knowledge that Lay
et al are being given a pass? Seems to me that the big difference
between nailing Lay and nailing Stewart is in the ability to make the
case; in the ability to establish personal culpability.

Why the hell would you post your crap for sale in groups
that have absolutly nothing to do with the topic? This
makes you worse than a crossposter. As far as I'm
concerned, you got what you deserve.

Here's your tissue. You can leave now.

>the other. Doesn't mean that we think she should slide on this
>(assuming that there is sufficient evidence to proceed and I have
>heard nothing but ranting to the contrary).

We do seem to be jumping the gun a little. :o)
Those who really know the law (not us), have not determined if
she might have broken a law and which law it might have been if she
had, and she has not been indited, and there has been no trial, and we
have heard no sworn evidence...yet we are ready to put the screws to
her.
The American public is supposed to provide a jury of her
peers. I hope she buys off the right people and gets off scot-free,
considering how open our minds are. :o)

>> When she sold her stock, she got what it was worth on the
>>street...she hardly ripped anyone off...anyone.
>
>Where did the money come from?

It came from people who thought they could do what Martha did;
get rich.

> If Martha did what she is alleged to
>have done, there came a day when she had at least tens of thousands of
>dollars that she would not have had if she hadn't broken the law.

If she actually did break some law. And really now, tens of
thousands is nothing. People who rotate tires for a living buy cars
costing "tens of thousands."

>Where did the money come from?

From people who wanted to buy what she wanted to sell.
Ever do business with a used car salesman?
I wonder if that would be considered insider trading? They

know things about the vehicle they will tell their friends but not the
buyer.
The antique trade is the same way.

> Perhaps there is a principle here
>which can be put to use to retire the national debt.

There is...set up a lottery, which is a lot like gambling on
stock, and let a few poor people win tens of millions of dollars and
then sit back and watch the money roll in.

>> Thinking she should have let her investment go down when
>>knowing it would, shows a little unrealistic thinking on your part.
>
>Do you think so?

Yes. If you had been her, would you have sold the stock?
Really.

> Here's a woman who was worth, at the time, maybe
>$500 million engaging in a patently illegal act (allegedly) in order
>to avoid losing what amounts to chump change.

Chump change is important to remember. It was just stock that
she had purchased on speculation. She was advised to sell it. She
sold it. Someone bought it.
If I told some brokers that I had $500 to invest, I wouldn't
get many calls.
If I told some that I had $500,000,000 to invest, I would be
called and visited by many people who would give me information that
they would not have given me when I was going to invest $500. The
higher the stakes, the more intimate the information the investor will
receive.

>> A previous first-lady didn't sell her "stock" based on inside
>>trading information; she "bought" the stock based on that information
>>and she held it only long enough to get the previously-known higher
>>yields and then sold it.
>
>Can you name some names here? I missed this story entirely.

Check how quickly Hilary made money. From start to finish.
She says that she was just lucky. She might have been; many do not
think so.

>> Martha Perfect invested for capital gains and
>>was taking the risks along with other investors...and then she heard
>>she should get out. She did.
>> Who did it actually cost money?
>
>Once again, where did the money come from?

From people who was willing to give her money for what she had
to sell. Perhaps it was institutions with several thousand individual
investors...so it cost each a buck. Maybe it was put into a
multi-billion dollar mutal fund and this would have cost each investor
a couple of pennys.

>> The people who bought on the expectations that they would make
>>money on their investment. They didn't. Martha did not make the
>>stock go down.
>> Under the circumstances of investing, when my money man calls
>>me and says, "Ken, the talk on the street is that we ought to dump
>>your XYZ stock," I do not ask where he got his information, and I do
>>not say, "OH, Gee...I don't know if I should do this. What if all
>>those other people holding XYZ stock doesn't hear about this? No, I
>>will just wait until it goes down so my stock will be worth less and I
>>will be like all those other people."
>> Yeah, that is what I would do.
>
>It's not illegal to buy or sell stock based on rumors.

It may not be illegal but it is bad business. You buy on
fact; sell on rumor. So the man with the facts should have just said,
"I hear it rumored that XYZ will take a nose-dive Tuesday."

> If it's "the
>talk on the street," it's not inside information. If the "talk" is an
>opinion based on analysis of publicly available information, it's not
>inside information -- it's good financial advise. If you engage the
>services of your "money man" because he can give you good financial
>advise, you are wise. If you engage his services because you believe
>he is piped into information that is not publicly available --
>information that is available only to what are considered insiders --
>you are a criminal. Your choice.

I wish I had it just as many investors do.
Seeking corporate information is a business that can be risky.
You know that people are trying to get that investment edge...buy a
meal, pumping, treating, and "Oops, did I say that out-loud? Don't say
where you heard it."
The common expression for world affairs is "unidentified
source" or "on condition of anonimity" -- lots of ways to say the same
thing. Every one who has extra money wants to make money by putting
it in action.
It is not appropriate to create a situation where by an
individual's actions, security prices are going to rise or fall.
This, too, happens often and this involves millions.
Leave low-rollers alone and out of the judicial systems,
afterall, O.J. was inocent as was an impeached president...justice
comes in all flavors.
But we sure like to get indignant when we can put the screws
to someone we don't like.

>So, an alternative hypothetical. Your "money man" calls you up and
>says that you should sell some stock you own because tomorrow some
>information will become public and the price of the stock will go
>down. You stand to lose about $2000. What do you do?

>Now, assume
>that you think there is a good chance that you will be arrested and
>incarcerated if you act on this information -- what do you do now?

I would have called my money man with an order to sell so fast
the second question would not have occurred to me. Timing is
everything. By the way, I have cautioned my money-man on what not to
say to me. This, is contingency thinking.
>>
>> Ken Cashion, who thinks you are stupid.
>
>Stupid for what reason?

For discussing details of laws that have not been defined
about investment strategy he did not understand to punish someone who
has not been indited. That is pretty stupid.

> Stupid for believing that people should obey
>the law or pay the price even when it's very very tempting to not obey
>the law?

Like speeding?
Like diddling IRS numbers?
Like not reporting tips?
Like filching supplies from employers?
We only want to apply the law to others...and in particular to
the rich...who somehow must have become wealthy by less than honest
means.

> Stupid for not believing that money can be manufactured out
>of thin air by insider trading?

Tens of thousands of dollars collected a penny per individual
(and the individuals offered it), is different from tens of thousands
of dollars from someone person who was investing more than they could
afford to lose.

>Better than turning lead into gold (you don't even need any lead to
>start with) but just as impossible.

Lots of stuff have been turned into gold...even time...but one
should not get "too much" gold...the public will not like them.

>Harold, who you probably think is stupid as well. I can live with
>that.

How about "unrealistic and self-righteous?"

Ken Cashion

>*There are laws and then there are laws.

Has anyone determined what resistor to replace to increase the current to
about 120 mA? There is a 27 ohm, 1 watt flameproof resistor on the board
connected to the power jack. Would replacing that help?

He is a much revered national radio talk show host, quite popular on the radio related newsgroups. One poster in particular seems to be infatuated with him so much that he spends his days just posting his name over and over and over again.

AAAhhhhh, the price of fame.

Hi calling from Amsterdam,The Netherlands... where Tetra (similar to Apco) has gone in operation this week.

IQuestions:

1)When listening to the (TMO)channels from 390.0125 to 394.9875 you will hear the continious "rattle" i assume these are Controller-Channels and will never have any (digital) speech on them ? could these freqs still be used for speech at an other location lets say 50km away?

2)It is therefore useless to scan the lowerband channels that combine whith them (-10mhz) ? in order to detect a local (TMO) transmission from any mobile in your area ? ofcourse you could search the whole band but this question is about the lower band of only the control-channels.
In other words you have found 5 local (rattleing) channels from a nearby base-station does that mean that the mobiles around this basestation are transmitting at the lowerband frequencies that correspond with the 5 upperband frequencies you have found ?

3)Whe do have basestations that can have as many as 5 controlchannels they are connected to 2 antennas, is that 5 transmitters on 1 antenna and 5 receivers on 1 antenna ? if the above channels are indeed controller-channels only ,does that mean there are even more transmitters and receivers connected to these 2 antennas ?

4)Or could such a controlchannel(frequency) carry controldata and voice at the same time ? (in a different tdma-slot) in wich case mobiles are indeed on the lowerband of a control-channel ?
(4 x 7.2kbs channels voice or data on 1 Rf-carrier are possible)

For AGA (air-ground-air) some of the basestations (24 out of 400)have a 3rd antenna wich is smaller (1/4 wave) they also produce a continious "rattle" at 1 of the 8 upperband AGA-frquencies.

5)These controller-channels(i assume) never change frequency under normal conditions? i guess not ?

6)Is it possible to predict on wich frequency mobile users will transmit when one knows all the local controller-channels ?

7)The only way to be shure you receive all mobile Tetra transmissions (TMO-DMO-AGA)
around your location would be to search all frequencies (380~385 +

390~395) while locking out the continious data transmissions ?

8)When moving to another area ,searching should be started "clean"
again and then locking out all continious transmissions again ?

Special (secret) services could be transmitting DMO on locally not
used TMO-upperband channels ?

Anyone have a sample of a mobile (not base) tetra signal ?
does it sound like just noise without any sync-tones
just a tsssssssssssssssss ? (in no way similair to the controller-
chan?)

Thanks

The OP is just interested in getting to know a bit more about TETRA.
The whole Dutch public safety is about to use a new country-wide
TETRA-network, so lot's of people are getting interested in all that
concearns TETRA.

It's not the actual *listening* to TETRA, but finding out how several
things work. Like which site uses which frequencies, how a mobile
TETRA signal really sounds, etc..

Everyone has his own hobby. If you can't find any respect for that,
well goodbye then Steve...

Steve,
Your an ass hole. You got a dumb mouth. They guy asked a question and
you had to get him some smart remark.

I hope you'll will over look this rude American, we are not all that
way. He's just trolling hoping to get something started.

> Would hope you would thing about "NOT" cross posting in the future!

Well the opinions about cross-posting seem to differ. Here in Holland lot of people get "angry" when you dont' cross-post, because the question could already have been answered in an other group.

Your point is clear Burr, but it's not only annoying that something is crossposted, it can also be very annoying when you answer a question when someone else already did it, but you couldn't know...

> Burr

There is absolutely no problem with cross-posting. When we get a problem is when folks cross-reply, often with some inane comment that has nothing to do with the original question but then appears on multiple newsgroups. It is quite revealing that complainers of this facility often fall foul of cross-replying themselves.

> will hear the continious "rattle" i assume these are Controller-
> Channels and will never have any (digital) speech on them ? could
> these freqs still be used for speech at an other location lets say
> 50km away?

I believe every radio channel used at a site always has a full 'rattle'
going on. One radio channel will contain control data as one of the
four timeslots, leaving 3 for digital comms channels. The other(s) will
all have 4 time slots available.

Channels can only be reused furhter away if they don't interfere

> 2)It is therefore useless to scan the lowerband channels that
> combine whith them (-10mhz) ? in order to detect a local (TMO)
> transmission from any mobile in your area ?

Not useless - that's where you'll detect transmitting mobiles

> In other words you have found 5 local (rattleing) channels from a
> nearby base-station does that mean that the mobiles around this
> basestation are transmitting at the lowerband frequencies that
> correspond with the 5 upperband frequencies you have found ?

If they are talking, yes (or logging into that cell)

> 3)Whe do have basestations that can have as many as 5 controlchannels
> they are connected to 2 antennas, is that 5 transmitters on 1 antenna
> and 5 receivers on 1 antenna ? if the above channels are indeed
> controller-channels only ,does that mean there are even more
> transmitters and receivers connected to these 2 antennas ?

They can either TX/RX on one antenna or use separate ones.
Typically 3 antennas are use for RX, to give 'diversity' (the
best signal is used)

> 4)Or could such a controlchannel(frequency) carry controldata and
> voice at the same time ? (in a different tdma-slot) in wich case
> mobiles are indeed on the lowerband of a control-channel ?

Yes yes yes

> For AGA (air-ground-air) some of the basestations (24 out of 400)have
> a 3rd antenna wich is smaller (1/4 wave) they also produce a

> continious "rattle" at 1 of the 8 upperband AGA-frquencies.

The 1/4 wave radiates well, up and around for aircraft

The 'rattles' take up the whole 25kHz channel loudly - many scanners
have trouble locking on to this and skip over it. You'd need a wider
filter. Not worth the effort - a manual scan of 200 channels once in
a while (with the VFO) won't hurt.

> 5)These controller-channels(i assume) never change frequency under
> normal conditions? i guess not ?

Don't believe they do, no. Fixed channel assignments?

> 6)Is it possible to predict on wich frequency mobile users will
> transmit when one knows all the local controller-channels ?

The strongest site, probably starting on the control channel, moving
to another channel if all timeslots are in use

> 7)The only way to be shure you receive all mobile Tetra transmissions
> (TMO-DMO-AGA)
> around your location would be to search all frequencies (380~385 +
> 390~395) while locking out the continious data transmissions ?

No, just DMO 380 and 390, knowns TMO - 10MHz, and AGA - 10

> Special (secret) services could be transmitting DMO on locally not
> used TMO-upperband channels ?

No need for them to hide! DMO takes place on DMO channels

> Anyone have a sample of a mobile (not base) tetra signal ?
> does it sound like just noise without any sync-tones
> just a tsssssssssssssssss ? (in no way similair to the controller-
> chan?)

The signal is only there 1/4 of the time. It's hard to make out amongst
FM noise, so listen on AM and you'll hear a buzzing sound (but only when
they press their PTT!)

> themoreyouknowthelessyouknow !

Indeed!

It's been said several times already, but all those posts including the one you replied to were originally sent by Dan over a period of years.

Someone is digging them up and reposting them all at once to several groups under Dan's name to annoy us and Dan.

No I don't work for the FTC, although they do have a field office in the building. But so does the F.B.I. and the U.S. Marshals, the Internal Revenue Service, the Treasury Dept, the US Postal Inspection Service, the U.S. Attorney's Office, the Social Security Administration, the U.S. Army, U.S. Air Force, U.S. Navy and the U.S. Marine Corps thats why it's called the federal building :-)

And yes I'm an old fart with 24 years in the U.S. Army. I was shotup in the gulf Feb 02,1991 and was honorably discharged Nov 11, 1991 after 24 years service. I now work in a federal job that has nothing to do with the guys on the floor under us, i.e. the Federal Trade Commission. The only thing we all have in common in this building is all are e-mail filters point to the spam server at the FTC office in D.C. That's why under my public e-mail it states "uce@ftc.gov" and under my signature it states please send all your spam there. We all support the state spam laws and the new federal spam laws about to go into effect this Nov..

And that fact seems to have made Mr. Agent Smith annoyed.. We are ll wondering what kind of agent mr. Smith is???

1867. Netherlands AF F-16s and KDC-10 tanker arrive at Melbourne IAP

Newsgroup: rec.radio.scanner
Date: 2003-06-06 20:29:46 UTC
From: allanstern@aol.com
Message-ID: <20030606162946.07717.00000143@mb-m24.aol.com>
Source record: 29995

It is 4:00pm EDT, and a bevy of Netherlands AF F-16s is landing at Melbourne IAP right now. These are probably the same F-16s that stopped by here on their way to training exercises at NAS El Centro in mid-April. They used the same callsigns: Netherlands AF 8#. Today, they arrived as three separate flights of multiple acft: Netherlands AF 81, 83. and 86. They used both UHF and VHF freqs, and landed using Melbourne IAP Tower's UHF freq 257.8. In trail was Netherlands AF 49, one of their 334 Sqdn KDC-10 tankers (Tail #T-235). He landed at Melbourne IAP at 4:15 pm using the tower's VHF freq 118.2.
Related to this, on Wednesday 4 June 2003, this Netherlands AF KDC-10 came into Melbourne and offloaded safety flares and ejectors seats for the F-16s. Aero-Group Inc, a company located at Melbourne IAP, provides operational support to the Netherlands AF acft for the exercises they perform in here in the States.

Well yeah, but I don't remember him specifying that he specifically wanted a portable rather than desk top scanner, just digital. That's why I threw the 785 out there too.

BTW, I can't wait for the RS digital; I am not too fond of the 785.

I just spoke to the REAL Dan Conti and he told me that unlike the current imposter on the groups, he cannot represent someone else or take credit for their work.

Although THIS Dan Conti has a beautiful website, our REAL and BELOVED Dan Conti here is not THAT Dan Conti there on that website named Dan Conti.

Phew.

Anyone have any good frequencies to progam into a scanner for the region around the Michigan International Speedway.

100 Ch's and CTCSS Tone Board. That's It.

Will the pre-programmed buttons on a BC 760 XLT be any good in around that area. Pretty much interesting stuff to listen to enroute from Detroit to Brooklyn, Michigan.

AOR AR900 Handheld scanner with Radio Shack scanner antenna, and small
Li-Ion 6V batt.
Scanner always shows low batt, even when hooked to power supply. The battery
cover clip is also broken, but is intact. The receiver is fine, works well.
Comes with wall charger and original hard leather case.
Features include:
100 channels
search mode
channel lockout
delay
AM & FM modes (user selectable), unlike the new handheld scanners.
27-54mhz
108-174mhz
406-512mhz
830-950mhz (no gaps)

Serial#7395

email direct if interested
thnx

I would say that Martha Steward like Oprah Winfrey has been 'good' for
the 'average' American Women in Re-Affirming their Traditional Roles
in Our Progressive Society. A Progressive Society changes over time
with the generations as the people within the society group and evolve
into better beings.

Martha Steward (The Public Persona) to many (most) Americans
represents the right way of 'living the good life' of traditional
personal values and wholesome family values. Preaching the "Art of
Being" a Good Home Maker and Being a Good Hostess.

To the Women's Libbers and the Left Wing Press:
- - - Martha Steward's "Public Persona" is everything that is wrong
with the traditional role of women in the American Family and Society
as a whole.

To the OWLES: Martha Steward is like the WHITE MAN (All White Males)
Collectively these "Evil Ones" represent Everything That IS Wrong With
The World and Must Be Portrayed as "Bad" "Evil" and something that
must be destroyed to radically change our society and the world.

The OWLES - One World Liberal Elite Socialists

Blessed by God with Life and Progressive by Nature by Living ~ RHF

Consider keeping the PRO-92 instead of the PRO-94
if you must return one.

The PRO-92 tracks LTR systems and has PL and DPL
squelch and display features. The alpha labels make
using the PRO-92 much easier. It's difficult to
remember who uses a given frequency if you program
a few hundred different frequencies and that's where
the channel labeling is a godsend.

You can download Don Starr's Win92 free software or my tk92
free software, the latter available from http://parnass.com

It's a lot easier to program a large number of
channels using computer software than wear out
the scanner's keypad entering them manually.
If you ever accidentally reset your PRO-92 or it
erases memory, restoring the image from a disk file
takes only two minutes vs. having to reenter everything
manually into a PRO-94.

The pro-94 can trunk more than one system though. So take that into consideration. If there are no trunked systems in your area, keep the pro-92.

This is a very high performace scanner, FULL coverage, built-in voice inversion descrambler, all receive modes, including LSB, USB, etc. Check the specifications on the web. Mint condition, original box, manuals etc. Original cost $585.00. See this link for details and specs.

www.bander.com/usa/scanner/yupi_mvt9000mk.html

This unit has the Bandercom mods installed and comes with 4 Nimh batteries and external charger. Best offer over $300 takes it. Otherwise, it goes onto e-bay in 3 days. Contact me by e-mail but remove the "notreally."

It says in the manual that the Pro-92 "tracks three trunking systems, LTR, Motorola, and EDACS at the same time as well as conventional systems." So I'm not sure how the Pro-94 is better (remeber I'm a newbie). I do want to listen to Baltimore County police in Maryland. They use 800MHz trunked system. Thanks for the responses.

Hi,

The Oki MSM5524 is both a Display and Frequency Counter widely used in FRG7700 and R1000.

I managed to save a couple of them during the early 90's and they are still in good condition. Each IC will cost US60. They were bought as spares when I previously repaired my R1000. Hopefully, it may help to solve your malfunction display.

I can email you a softcopy of the R1000 schematic as well.
Let me know if you like to have the chip for repair or spares.

Thanks and Regards

I visited your website, great work! I have a frequency listing, the
file is named scanal11.zip. It has a number of 800 Mhz freq's for
Calgary police, fire and EMS, and also 154-155 Mhz RCMP channels,
these are not listed in the TAFL.
If you are interested, I can post them here, or attach the whole
file to an E-mail. I uses the library computers for the Internet,(not
my home computer) and I will be back on Monday.

Not so fake as you might think. Do a Google search on ol Dan and see what
he's been posting. (Ignore the past month or two)

You'll see Dan's been doing for sale and for Auction posts along time and
that's mostly what he does. He just finally pissed someone off.

Does anyone out there have or know where I can get a manual and a schematic for this scanner. I have had this scanner for 15 years and am having trouble getting it repaired especially for a reasonable price. If anyone knows of a reliable repair shop that repairs this model scanner for a fixed fee and guarantees their work, I would like to know.

At CompuUSA, and maybe its sister store CoZone as well. Columbia Battery Charging System, SKU #301822, includes 4 AA and 4 AAA cells. $14.99 minus $2 instant saving, followed by a $13 rebate. The brand name on the cells is "Fullymax," and I suppose it's all made in China. I know the same item was free after the rebate two weeks ago too, so this seems to be an ongoing affair. The prices in this flyer are good from Sunday 6-8-03 through Saturday 6-14-03.

OK, maybe I'd better straighten this out for the record before I
bumble into a lawsuit. I was having a little fun with "Big Wilson."
To my knowledge, D. Conti, graphic designer, is very likely not the
same person as D. Conti of r.r.s. fame. Still, the website is very
well done IMO.

1904. FS: RS Pro-2022 Programmable Scanner - NICE

Newsgroup: rec.radio.scanner
Date: 2003-06-08 00:12:32 UTC
From: Don <k4wva@cox.net>
Message-ID: <SbvEa.8959$1D1.4138@lakeread01>

"Made in China" is a WARNING LABEL.

Example:

I purchased a Radio Shack battery charger
(M in C of course) and despite using the
proper type batteries that were recommended
by the manufacturer it smoked one day
after just 3 months of casual use. Thank glub
I was home and smelled it *burning* otherwise
it may have burned down the house. Since then
if it says "Made in China" and plugs into the
wall socket, it does not get purchased by this household.

Radio Shack (18yo kid behind the counter)
offered me a replacement. I said no.
They really thought I'd bring another "timebomb"
into the house after the first trial run "fire drill"....

You are sadly mistaken, my friend.

Throughout his entire tenure on the newsgroups, (almost since the beginning when Al Gore invented the internet), Dan has posted his share of items for sale or auction, but no more or less then any other active radio hobbyists.

In all of that time, in all of those items, he NEVER had a complaint of unhappy customer. Just think of all the radio hobbyists who had the benefit of nice equipment at reduced prices.

Also if you REALLY did a Google search, you will see that Dan's legacy on the groups was alot more then just FOR SALE or FOR AUCTION postings.

Now that he is under attack, and his name ruined, all geniuses like you can do is kick him when he is down.

Whatever you disliked about Dan's activities here, did the punishment fit the crime?

I believe this to be somewhat true. I stay away from inexpensive electrical items "Made in China".

We bought an item that you plug a standard lamp into, it then allows the lamp to operate simply by touching a metal part on the lamp. It was an interesting item, as the use of a single way bulb offered three way functions, dim, bright, off.

One day it no longer worked, so I set about unplugging it. It was in a receptacle near (not against) the rear of the couch. It was quickly evident that the case was quite burned up, the possibility of the couch catching fire was much more than I am willing to hazard by buying a similar item to replace it.

I have seen a clock radio and a combination clock/weather/ and AM/FM radio that were made in China. They didn't function right out of the box. I took them apart to see if I could resolve the problem rather than returning it. The astonishing thing was that these 2 radios had wires that were simply twisted together and taped with (drum roll please), Scotch Tape.

Nice work eh? Anyway, I have seen many finely manufactured items from China, so I don't believe that the problem is universal, BUT, cheap Wall Warts, Chargers, Fluorescent Lights, and any 120 Volt (i.e. Line or Mains powered) need to be watched carefully, lest you end up in flames.

Regards.

It doesn't leave me all warm and fuzzy either. I always check the box when looking a product over to see where it is from. If nothing else, you could buy the charger, leave it in the box, and use the cells only. At least the price is right.

Best wishes.

There are MANY such stories in America. I myself came from a poor home, yet in just 3 years of hard work, I earned almost $1 Million. BUT, how does that excuse her KNOWN Insider Trading? The middle man has already ADMITTED her guilt!

She found out through her inside person that the stock was about to be devalued, and so she sold her stocks rather than take a loss. That's illegal!

Not as evil as Bill Gates, who CONTINUES to flaunt the law, but bad enough to get her prison time. Now if the laws of our land ARE fair, Bill Gates will be doing some prison time, too.

Never happen.

"Crime DOES pay when you're Bill Gates."

That's why we only buy solder and wire from Radio Shack, i.e. a few years
back I picked up a mico cassette unit from them. Ten days latter it smoked!
I took it back in and was told "we will not replace that unit, we will send
it in for repair" One month later they called me to pick it up. Three
weeks after that it smoked again, and again I took it back. That was Feb 26
2001 I'm still waiting for the return of the unit.

<snip>

I must disagree with the above statement. Women made cakes, breads, pancakes, pies and other dishes - main course and desserts - long before canned foods, instant mixes and TV chefs were available. Stoves, Microwaves and even BBQ cooking as well as other ways of preparing foods came on the scene long before Martha Stewart was a household name. I'm damned sure women knew how to cook long before she started her shows. Your mother fed you didn't she? She was an enterprising women - no doubt. As male, I took in a couple shows or so - "IF" it interested me as scanning through the channels. Though the subject may have been somewhat interesting, her personality turned me off even when watching her the few times I did. Even with her guests, to me, she was a cold fish. No warmth at all. Be that as it may, SHE didn't not domesticate the American people or any one else for that matter. That is ONE credit she can't get. She may have taught a few who didn't know any better and were afraid to ask... But she sure didn't teach ALL women or men for that matter. "IF" we are still "eating out of cans", it is only because we don't take time to sit down to a home cooked meal as we should due to what ever we have going on in our lives. It isn't that people don't know how to cook, they often don't take the time. L.

1931. About Scanning (on toppic) DreamLand/Area 51

Newsgroup: rec.radio.scanner
Date: 2003-06-08 14:27:56 UTC
From: Burr <pitzpho@earthlink.net>
Message-ID: <3EE35602.7000400@earthlink.net>
Source record: 29861

I have been working on Dreamland the last two days hoping to pickup
something. So far I have never heard a sound from over there. I am
working with the squelch hoping this may help and keeping my antenna
ground good and wet to keep EMF bled off.
I am also monitoring Salt Lake Center and Nellis AFB. I am a hundred
miles away but I was/am hoping to pickup some of the military aircraft
flying over there. On Monday maybe there will be something from that area.
I have one bank setup just for testing and I change setting in and out
of this all the time.
Does anyone live over that way? Has anyone been on trips into that area
and done any monitoring?
My Scantenna is up 16 ft. and with this wind we have I don't want to
put it up any higher.

TIA,

I tend to agree here, Ken Lay and his Enron buddies ripped millions from the Enron employees, stole their retirements, ruined lives, and they are still running around free, they should spend the rest of their lives locked away for what they did. The stock Stewart sold was chicken feed compared to that and to her own financial wealth. I think her broker may have had some inside information and did not pass that on to her, but just advised her to dump the stock and she said OK. I don't think she would knowingly risk so much for less that $50K worth of stock, that is pocket change for her.

Batteries plus will weld your cells together.
If you buy the cells from them, they will weld them for free.

Soldering to nicad/nimh cells damages them by overheating and melting the
insulation.

Well, anything important is going to be encrypted. I rooted around a
bit and found some _old_ info:

297.650
261.1

Here's an article (no freqs specified) on early Area 51 monitoring:

http://www.aliensonearth.com/area51/articles/1994/wired_9404.txt

Old freqs for Janet:

HAND-OFF SEQUENCE FOR "JANET" FLIGHTS: LAS VEGAS TO GROOM LAKE-

(1) 121.90 MCCARRAN GROUND CONTROL
(2) 119.90 MCCARRAN TOWER
(3) 133.95 DEPARTURE CONTROL - LAS VEGAS
(4) 119.35 NELLIS CONTROL
(5) 000.00 ??? GROOM TOWER

(got those at:
http://www.aliensonearth.com/area51/org/nellis/ref/freqs_cravens.html
which shotguns a list of Nellis/Holloman/gov freqs that might be good to
hunt)

http://www.aliensonearth.com/area51/

There's a site search engine there - have fun!

The 'net experts on batteries are found at
Group: rec . photo . digital

Those people use a lot of batteries for the digicams.

There you will find that nicads are passe, and the ones to buy are
Nickel Metal Hydride [NiMH].

I got mine at http://www.thomas-distributing.com/maha-mh-c204f.htm

For Long Distance at 2.9 cents per minute no other fee see:

Hi,

I am looking for a charger for the Welz scanners.

Type CSA401, made by Standard.

Please mail me if you have one for sale, but remove the spamtrap out of my emailaddress.

Regards,

Marcel

1946. Who knows the new VR120 scanner?

Newsgroup: rec.radio.scanner
Date: 2003-06-08 21:03:56 UTC
From: ScanWeb <scanwebREMOVE@planet.nl>
Message-ID: <bc08ee$98$1@reader10.wxs.nl>
Source record: 29876

It is said that the VR120D has charging sockets, and the optional CSA401 can be used to charge this scanner.

I see that this charger can be used also for many standard equipment, including my Welz scanner.

Where can the accessoires be bought?

Regards,

Marcel

I am using a RS Pro-92 scanner and am not getting very good reception in my area. I'm mostly interested in police, fire, ambulance. But since I'm new to scanning, I'd like to leave my options open. I'm thinking about buying the RS Center-Loaded Telescoping Whip Antenna (20-006). Will this help my reception? Or should I get one of those 800MHz antennas (like the Seeker 800MHz Rubber Duckie)? I don't care about portability... I mostly plan to use in my house if I can get any signals. Thanks in advance for your opinions and help.

Keep us posted, nothing on CNN....

If you can receive LAX's ATIS give that a shot and see if there's any announcement on their ATIS broadcast.

> Where do you think the batteries were made? Mine say "Made in China"...

If I may step in for a moment here.

My company runs two manufacturing plants. One in Vancouver BC, the other in mainland china.
Both plants operate at 6 sigma quality, which is somewhat better than Motorola. We produce all labor-significant products in China.

Anything that involves a lot of manual operations is going to be less expensive to produce in a country where manual labor is paid dollars a day, instead of in the good ole USA where it's 12-30 dollars an hour.. When your goods are sitting on the shelf, that "made in the USA" sticker won't save you from bankruptcy when an identical product made in China is sitting on the shelf at 2/3 the price.

Sure you can buy crap from china. And Japan, and the USA, and any other country you care to mention. You can also get superb quality in the same places. Just not from the same companies.

The fact of the matter is that if my competition can make goods of acceptable quality with lower priced labour than I can, I need to get about doing it that way as well, or close up shop.

Whatever you might think of their politics, the Chinese people are by and large, just like you and me. Trading with them also exposes them to the rest of the world, and plants the seeds of change.
Think not? What happened to feudal Japan? Anyone remember the Soviet Union? Racist South Africa? It's not going to happen overnight, but it happens.

Taiwan is a much nicer place to be today, than when I started going over there in the '80s. Air pollution was staggering. My apartment was literally a stone's throw from Chen Ching Lake in Kaohsiung, but only on Sundays could I SEE the lake. I could always hear the "plop" though. :)

Over the last 20 years, their government is much less of a military dictatorship, and much more of a democracy. Their air pollution is much better (though still a ways to go). And the prople are, by and large, just like you and me.

I read your post and I concur. As far as the updated listing of Mobile Scanner Laws, please refer to http://www.afn.org/~afn09444/scanlaws/ On that page is the link to State Scanner Laws at http://www.afn.org/~afn09444/scanlaws/scanner5.html

In my searches, I found mention of a city in New York State that seeks to ban the possession of scanners, whether in hand, car, or home. Though no exemption is granted for HAM licensed operators, I found the following concerning the FCC claiming sole authority to regulate the air waves and license operators (the supposition being that the FCC would assert dominance over a local ordinance attempt to forbid HAMs from possessing radios incidentally capable of receiving Police and other communications).

http://www.nf2g.com/scannist/us_laws.html

"FCC Rulings One other interesting item came from the FCC although it was not specifically addressed to scanner users. The FCC's Private Radio Bureau issued a declaratory ruling on behalf of amateur radio operators. The hams were having trouble in several states with local laws banning or restricting antenna installations. The PRB ruled that such laws were invalid since they conflicted with Federal laws. PRB-1 reinforces the concept of Federal preemption of radio laws. In other words, only the Federal government is supposed to have the authority to make laws regarding the use of radios and related structures.

Late in 1993, the FCC issued another declaratory ruling that upholds the idea of Federal preemption of any state or local regulation that would impinge on the ability of licensed amateur radio operators to have mobile ham equipment that was incidentally capable of receiving police or other frequencies. The docket number for this ruling is P.R. 91-36.

The FCC further broadened its authority in 1996 with respect to antenna regulation to include local zoning laws and restrictive private covenants that affect TV antennae. P.R. 96-328 prohibits any such restriction on Direct Broadcast Satellite (DBS) dishes that are less than 1 meter in diameter, Multichannel Multipoint Distribution System (MMDS) antennas less than 1 meter in diameter, and all TV antennas. Restrictions on masts that are higher than 12 feet above the building may still be allowed."

Regards.

ATIS frequencies for LAX are 133.8000 MHz for Arrivals and 135.6500 for Departures.

ATIS stands for Automated Terminal Information Service. They are continuous recored broadcasts which are updated once per hour or when ever there is a large change in weather or airport conditions. The ATIS broadcasts contains wind, weather, airpressure setting (altimeter) temp, clouds, runway, runway and taxi-way closures and any other information which would be useful to arriving or departing aircraft.

ATIS is updated whenever any official weather is received which is usually once per hour. Each broadcast is identified by a letter from the phonetic alphabet (Information Alpha, Information Bravo, Information Charlie etc.) Many times when you hear an aircraft make their initial call up to approach and/or tower you'll hear one of the last things the aircraft say is "we have information charlie" or simply "we have charlie". They're letting the controler know that they've tuned in and listened to the latest ATIS broadcast.

Hope that helps

Matthew,

More information would be helpful. Are those police, fire, and ambulance frequencies you wish to hear in the 800MHz band? Are you trying to listen to them indoors, with an indoor antenna on your scanner? I'm not familiar with the scanner you have, but I can tell you that an outside antenna, place up at as high as you can reasonably put it will greatly improve your reception over any antenna you use indoors. Personally, I prefer the discone type antenna as they are so broadbanded, but you can find all kinds of outside antennas available, some with a little gain.

I am looking for a way to log Radio ID's on a Motorola Type 2 system. My problem is We have someone who seems to be intentionaly keying up over other users. This is happening very often.....2 or 3 times a day, but at all times of the day...with hundreds of users, all with the ability to transmit on the same groups, it's not easy to figure out who is doing it..... I need some advice....I would like to set up a trunk tracker with 2 scanners, one to monitor the proper talk group the other to do the trunk tracker stuff, and if possible plug it all into a vcr to be able to record the output and be able to play it back to prove who is messing with us....what would it take to do this? sanner models I should look for etc.....

sorry if i am using too much band width....

Thanks in advance.....

DFC2

Now my disclaimer....

if your going to try and sell me your equipment to do this, don't waist our time....if you want me to go to the police or something like that....too late..... if your upset that i am trying to catch this person.....you must know that he risks MY life every time this person covers our traffic.....if you have some helpfull advise, or can tell me what equipment i should look for, then feel free to e mail me thanks.

Well, if you put a nice antenna up about 20 or or feet outside and route the feed line to your couch, you can plug it in to your scanner's external antenna port and enjoy greatly improved reception from your couch. Depending on what its made of, your house will have a noticable to severe impact on reception at 800 MHz with an indoor antenna, especiall those "rubber ducky" types which are lossy in their own right.

I have a Uniden Sportcat 180. I have been looking into getting an extra battery and a charger for it (not another scanner charger but a seperate wall charger). I can order the battery from Radio Shack, but I can't seem to find any kind of chargers for the battery. When I had talked to the local store, one employee had made it sound like I could order a charger for the battery. Since then nobody seems to understand what I want to get. The battery I would need to charge is a BP180. It is a 4-cell 4.8V 800mAh NiCad battery pack.

So the question I have isn't as much about the battery, but where I might be able to find a charger for it so I can always have a battery ready to go when one runs down. Are there chargers like this, or am I pretty much screwed?

Any help would be appreciated!

Thanks,
Brad

If your going to use it mostly in your home then just pickup a Scantenna
http://users.cis.net/kingpop/Scantenna.htm
mount it 20 feet off the ground minim and you will be good to go for at
least 50 to 65 miles. And another good thing about the Scantenna is it
will plug right into that Pro-92

That's a mess George,
I bet it is going to take a lot of work to undo it. Do you know who did it.
Something has to be done about all this spaming, it is getting out of
hand. I have 7 email accounts and I get tons of spam everyday, I don't
open most of it and drop the one that I do open as soon as I see it is spam.

So you're into R/C and Rockets as well? Besides having my Private Pilots license for 14+ years I use to be highly competitive in R/C Pattern Flying (have a NATS trophy from the 1990 Nationals for Aerobatic/Pattern).

Also been into rocketry (mostly high power H, I's, and J' motors) for sometime as well. In fact I did the design and manufacturing of the kits which use to be sold my Mountainside Hobbies in Ephrata, PA. Mountainside has long gone out of business but if you were into Rocketry back around 1995 you may have heard of them.....

>
> (snip) I'm thinking about buying the RS Center-
> Loaded Telescoping Whip Antenna (20-006).

Since several have explained the benefits of an outside antenna, I decided to more directly answer your question about the telescoping whip.

Compared to the stock flexible rubber antenna, the benefits of a telescoping whip will be very minimal. For most of what you hear, there will hear no difference at all. For some frequencies, there may be some very slight gain (hardly noticeable), but that will be offset by a slight loss on other frequencies (again hardly noticeable). In other words, I don't see any real benefit in replacing the stock antenna with something like a telescoping whip.

If you must have an indoor antenna, and ease of placement is important, consider a simple wire antenna instead. A wire antenna is very easy to make. At Radio Shack, pick up about five to ten feet of very small gauge wire and an banana clip (270-346, 270-378, 270-1545, or something similar).

Strip off about a quarter inch of plastic insulation on one end and solder the strands together. The soldered end should firmly fit into the center socket of your radio's antenna connector. On the other end of the wire, attach the banana clip. The banana clip is used to clip the wire to a nearby object to hold the antenna up.

Now, when you're ready to listen, simple clip the wire antenna to a nearby object (light fixture, picture, or whatever) and plug the other end into the center socket of the radio's antenna connector.

Depending on the wire length and how high it is mounted, this should work better than either the stock antenna or the telescoping whip. If you want to get fancy, you can even add a BNC connector to the soldered end.

1985. Coax / BNC Connector Question

Newsgroup: rec.radio.scanner
Date: 2003-06-09 17:46:47 UTC
From: adoniscat@yahoo.com
Message-ID: <5147a47d.0306090946.15fd13b1@posting.google.com>
Source record: 29764

I'm currently running RG-U6 Coax from my external antenna (Scantenna) to my handheld scanner. I have a radio shack "solderless" BNC connector attached to the coax, which has broken several times (the post that connects to the coax rips the foil sheath from the coax, causing lots of static). Any directions or advice on how to properly attach a BNC connector to the Coax?

Thanks.

If your contacted by this guy or see a post from "homesteaders2003@yahoo.com" or "Homesteaders2003@yahoo.com" don't deal with him!!! He had a low profile for a while, but he's back at the scamming.

Most Current info is:

Dave Munroe (doubt if that's real)
220 Paudash Road (doesn't show up on Yahoo Maps)
Hiawatha, Ontario, Canada K0L-2G0 (Again, the city of Hiawatha doesn't show on Yahoo, and this is a new city compared to his old city of Keene)
Cell phone (yeah right) is 705-313-1518

Mail is beginning to bounce to the lower case homesteaders2003@yahoo.com. My most recent email from him was dated in mid-May in which he claimed that the mail is slow.

He currently has several ID's still active on Ebay of "leanna2000", "-pokey-", "Quake99" and "Invest7". All have 0 feedback's but ebay only goes back 30 days for history now. So information is skimpy.

Maybe not... I've recently installed a Scantenna for use with my
Pro-95, and have experienced considerable overload. Granted, the
overload is mainly around 150 MHz, so if all that's wanted is 800 MHz
it might be ok.

Not sure how similar the two units are, but I'd be wary of an external
antenna and handheld (Radioshack) scanner. (FWIW, I've reduced the
problem by installing a RS FM Filter.)

I have a telesopic antenna, the ANLI AL800 which is a highly rated 2m/440m handheld amateur radio antenna. Will this work on a scanner? I'm an antenna idiot, so thanks for the help...or, would the RS centered loaded whip (20-006) do a better job. Thanks.

Not me but some of the guys in this office are into rockets. We host the clubs web-pages and e-mails fore them and we help out by renting an old air force field from the BLM for $10.00 a year so they have a place to fly and launch there rockets. Some of the guys have gotten into liquid fuel so they need 2 1/2 miles from ground 0 in all directions and the FCC posts warnings on they days they fly.

> http://www.MilAirComms.com

I fly 2-Meter sailplanes and electric sailplanes. I also have a Great Planes Super Skybolt 57" wing with a .91FX O.S. for power. I'm building a Top Flite P-51D in 1/5th scale with 84.5" wing at the moment http://www.top-flite.com/airplanes/topa0400.html
I have a SuperTigre 2.76 cu G-4500 to power it. I use an 8 channel Airtronics and a Futaba 8UAPS 8-Channel for radios. And No I don't know your old hobby shop in Ephrata, PA. We are why west of Harrisburg, i.e. in Pittsburgh, PA. The old bomber field is 16 miles west of Uniontown in Fayette county, i.e. we have a 6 2/3 miles rocket range and a 28 acre grass and concrete area to fly R/C in. The end of one of the old runways is still there so we have a 210 foot by 385 foot concrete pad. Comes in handy for the jets. We also have an open pit coal mine thats now full of water for R/C boats. The kids have a blast on the week ends, we have a go-cart track to.

The community thing is cool, we have cook-outs, bar-b-q's, fly, drink some beer cook some ribs and every one is having to much fun to get into trouble racing dirt bikes, go-carts and flying.

So it piss's me off when some moron from this fourm thinks they are screwing with me and sends them carp like all that smut..

1995. Re: Coax / BNC Connector Question

Newsgroup: rec.radio.scanner
Date: 2003-06-09 23:49:23 UTC
From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3EE51D03.483B6594@optonline.net>
Source record: 29774

Several workable solutions, listed in order of decreasing flexibility,
but also decreasing potential for loss.

All of these involve terminating the RG-6 in a "Type F" connector (which
actually is made to fit the RG-6, unlike the BNC connector). This will
result in a mechanically sound connector attached to the RG-6.

1) Use a short length of more flexible RG-58 to connect between the
scanner and the RG-6. Use a suitable Type F to BNC adapter and a Type F
nipple betwwen the two cables. The loss in the short length of RG-58
and the adapter(s) will be negligible, even at 800 MHz. Any loss due to
impedance mismatch will also be negligible, unless you happen to hit a
particular frequency region where a resonance condition may exist
(unlikely).

2) Use a short length of flexible RG-6 with a Type F to BNC adaper at
one end, and a Type F nipple at the other. The loss of the adapters
will be negligible.

3) Use the stiff RG-6 right up to the scanner, with a Type F to BNC
adaper at the end. The loss of the adapters will be negligible.

You may also want to consider the use of a BNC elbow (or two) to allow
better dressing of the cable away from the scanner. Again, negligible
loss in the elbow.

I recently purchased a yaesu vr-500. I have the cable from RT systems and the adms-3 software. I am unable to transfer any files to the scanner or read from the scanner. I have been through the troubleshooting section of the software and am using COM 1 which is suppose to be an "open" COM. The software does not seem to recognize the scanner and the scanner does not seem to recognize the software. I have rebooted, cleared all memories in the scanner, reloaded the software...everything; yet nothing seems to work. Is there something special that I am missing? Is XP not compatible with the VR-500 Programmer software? The version is 2.05 if that helps. Thank-you for your replies in advance

I think you mean FAA, not FCC. For all rocket over 1 pound you need to
file for a NOTAM with the FAA....Been there, done that....

>
> And No I don't know
> your old hobby shop in Ephrata, PA.

We did a lot of mailorder business, advertised in all the Rocket
magazines as well as RCM (RadioControl Modeler) and MA (Model Aviation).

I never got into electric or glider. Always loved aerobatics as that is
what a do full-scale anytime I get the chance, that's the main reason I
got my private license 14+ years ago... But for R/C I love Pattern as
again I lvoe aerobatics and Pattern are some nice hi-tech planes. Now
a-days some of the competition gliders are getting pretty high tech as
well as they're using the Futaba 9ZAPS radios at $1400 each as well.
That's the same radio I use for R/C pattern.

You can see some picture of some of my older pattern planes at
http://www.milaircomms.com/rcpattern/

I would like to say that there is people like that all over the world. I buy items from Canada and the USA and I send the Money Order first, then the seller has it in his hand before he sends the item. The seller is protected and the buyer is protected by the Money Order as they can be traced. I note on each money order what the money is for, so they can be traced. Another good idea is register the item or use verification and then the person receiving the item has to sign for it, and it is traceable.

Please use your noggin when sending items to anyone, no matter where he lives.

I am a Canadian and the comments here are not justified.

I rigged the existing TV antenna on my roof to work with my scanner. I agree that an omni-directional would be better, but I've been listening to BCPD for like a half hour now with no problem. All I had to do was cut the end off the coax and terminate with a BNC connector I picked up at RS. Below are photos of my "solution". Take particular note of the packing tape that was used to "secure" the BNC connector since I couldn't get it tight. I know this will drive many of you crazy, but at least this will get me by for now until I learn more about working the scanner. I appreciate all the suggestions and I do plan to replace my roof antenna with a discone or Scantenna and low loss coax.

I know it's after the fact, but F to BNC adaptors are like 99 cents.

I think you will find that antenna & rotor will outperform any
discone. I would turn it so it is mounted vertical, and it will blow
most other antennas away.

Still wanna call yourself "That other George"?

Agent Smith is slowly uncovering your true identity..

By the way, would you care to explain THIS?
http://profiles.yahoo.com/treasurtagent001

Or shall I just call the field office of the FBI and tell them you're impersonating a federal agent on the internet? I'm sure they'd find that... cute.

How come you call yourself George in here, Phill on your forum and Tim on your website? They have medicine for that problem dude, and I hear that it works.

Your Pal,
Smith.... Agent Smith

2009. "Digital Scanners" Yahoo Group

Newsgroup: rec.radio.scanner
Date: 2003-06-10 04:01:32 UTC
From: David Pinero <public@davidpinero.com>
Message-ID: <80maevk4uh6270ql3lant58n8m30u2ia1n@4ax.com>
Source record: 29789

I currently own the Yahoo Group "DigitalScanners". The group exists as a listserv relevant to the development of digital radio (police) scanners. Unfortunately I cannot possibly keep up on the technology associated with the development of these scanners to maintain myself as a responsible and useful moderator for such an important group name.

Recently, Yahoo Groups informed me that I have to develop the group or get off the can. In light of the above I intend to relinquish the group but seek to do so in a controlled fashion that allows for another strong internet personality in the area of radio scanning to take it over.

If you are interested in assuming control of and development of this group, please contact me ASAP. I will only consider those entities who:

* Have a strong existing non-profit presentation on the web relating to police scanners and contemporary issues in public safety monitoring (I can overlook sites which sustain themselves through reasonable use of ad banners)

* Have a fairly searchable history online in this area (e.g. usenet, message boards) of being an independent and enthusiastic commentator in the area of radio scanning

* Have at least the minor technical skills required to assist in engaging the transfer, and maintaining it

* Can demonstrate the ability to promote and develop the list in the immediate future

* Who, with all other factors being equal, coordinate with me first

If this is you, please use my contact page to e-mail ASAP:
http://www.davidpinero.com/contact

We will coordinate to transfer the group via e-mail.

If no one is interested I will simply delete the group. I have no real issue with doing so but it is very likely that it will be taken by enthusiasts in other areas (e.g. people who work with digital scanning equipment in photography). That's obviously not so horrible itself, but it would be nice if radio scannists kept the group in the family at such an important time in the evolution of public safety monitoring.

Thanks all!

Dave

Hey GW, it's a two way street. Perhaps you have been taken by someone in Canada in the past, but that is no reason to label all of us. I have conducted many transactions over the internet with fellow hams who I have never met before. If you would like names I will gladly provide them. I always give more than enough information how they can get ahold of me in case of problems, and I have yet to try and "take" anyone. Why would I bother? What will I accomplish from it? Absolutely nothing. Once I got taken by a ham in California who traded me his "perfect" TS440 for my Yaesu FT900, yeah I know!!, only to find the Kenwood had the dreaded VCO problem. He denied it of course, and I learned a valueable lesson. But I still trust most of the hams out there. So please don't go labeling all Canadians as "rip-off artists" . Perhaps you are still sore that both our men's and women's Olympic hockey teams kicked your ass!!

> seperate wall charger).
....

> Are there chargers like this...?

I know exactly what you're looking for.

I own two SC180's. I bought both at Best Buy, where they were the display models. Each was missing the power adapter. To charge my battery pack, I used a Radio Shack charger I had bought years earlier as a discontinued. It's RS catalog number 23-244, "battery charger for #23-245 4.8-volt Ni-Cd batery pack." With an output of 60 mA at 4.8 volts DC, it charges the battery pack in 14 to 16 hours.

The Uniden BP-180 battery pack has a Mitsumi plug, so I had to rig up a couple of adapter wires to connect the RS adapter's plug to the BP-180's plug. No big deal. The date code is 12A3, which translates to 1993, so I had to wait a while for my 39 cent purchase to pay off.

But it's discontinued. So what to do if you want a new one? I have RS's last paper catalog in front of me, from 2002. On page 388, RS part 23-327, "universal 4.8/6/9.6 volt battery charger," could be made to work. Again, you would have to solder a connector on it, but that's no big deal. It's $12.99. You know, Wal*Mart, Toys'R Us, or a local hobby store might have a 4.8 volt charger, as that voltage is, or was, common in radio-controlled cars.

Best wishes.

Source record: 29796

Hi David Munroe in Canada,I have the most special of all 2006's awaiting to grace your mailbox.

Features:Case with no Plastic (totally redone with x-ray proof whimsidookle for shipping of highly explosive parts)

LCD Display has been modified for direct injection of Hydrochloric acid directly to your face.(Only activated if you tell a lie)

Power Modification has been all done,you can attach it directly to your balls for the most intense scanning you have ever seen.

Ah yes and the most of the most of mods.....The DELAY. Delay has been totally redone.I'm so excited ,the delay has been arranged so that when you sit for x amounts of minutes in front of this glorious rig,scanning,ripping people off,sending bogus newsgroups ripoff messages,it senses your tenseness and automatically redirects your computer to the nearest frapping site on the internet...

And for you David what does this all cost,for you I think it should be free,yes even with all these fantastic mods that have been included,you pay nothing....kinda goes along with what you are - don't ya think??

I've read of many problems with those chargers. My friend's wouldn't
stop charging, and mine kept charging the included AA cells for
fifteen hours, even though the cells had been hot several hours prior.
It seems that this charger doesn't really detect full charge but
normally just measures the amount of time the charger has been
running, which can be very bad for the cells.

yeh and all of that crap you stated means absolutely nothing......you
cannucks are the worst when it comes to radio dealings and that is the
way it is......and also your anti war diatribes are noted to
pally..........

hey look cannuck..........you are not going to get any sympathy from
this operator about a damn thing..........and that is
that........canadians are a bunch of dicks............and as far as
your olympic triumps are concerned..........who give a
fuck..........what else have you got to say.......you pinheads are
nothing but a bunch of loosers along for the ride.......living off of
the scraps that fall from our tables.......the only damn reason your
silly hockey teams won is because the us teams spend too much time
drinking and not enough time practicing, which under the circumstances
speaks volumes about what they think about the whole deal.......since
most of them are pros and wealthy anyways.......besides when was the
last time you assholes won the stanley cup good buddy???????? tell ya
what.......go have yourself another molson and shut the fuck up....

Kinda bepends on the tower and how you setup antenna bays.... I could put
an easy 36 up on our 40 foot tower..

Well Matt you didn't say what kind of scanner you have, i.e. handheld base unit what?? But in ether case if your just to lazy to put up an outside antenna :-) and you just want to set on you couch and listen... Try this http://users.cis.net/kingpop/Scanner/TGS.htm on the nearest window to your lazyboy...

Thats it brain fart, looking at a FCC report in front of me and typing :-)
They file a ton of paperwork with the Connellsville airport about 2 weeks
before they fire them thangs. I can't get into it rockets, i.e. 2 months to
build it, in 10 sec it's done and if everything works you can fire it
again. But if something goes wrong! You have a hole in the ground ... :-)
I crash something I can fix it :-)

Yes TIM. It was all me. Everyone who hates you is really me. I'm everywhere TIM and I see everything. And what you got was some address belonging to an ISP in Mexico who could care less about US LAWS. So in reality, you got NADA gringo.

So, treasurtagent001@yahoo.com what kind of agent are you TIMMY? You live pretty high on the hog for a g-man TIMMY. Hot Rods and Harleys? Hmmmmmmmmm. Expensive toys.

Yup, I found out all about you spam boy. But you just go ahead and keep running your mouth. The more you spout the more I dig. Plain and simple. A concept so simple even you can understand it. It can end at any time of your choosing TIM. All you have to do is admit here and now that you're a liar and I'll leave you alone.

Unless, you care to back up your words with more than your website, loser.

> Out of work Americans won't be buying your products. Why is that so hard for people like you to understand?

I understand it completely.

Unfortunately, I can't afford to hire americans to do this work. They want 3-10* as much money, and then we get to do the union dance... (That's where the union makes me pay you more, so they can take a slice, then do essentially nothing for you, while telling me I can't promote the most competent, I can only promote the most senior..) No thanks.

If I hired americans for the assembly line, then my products would cost 20-50% more than my competition with the same thing, and nobody employed or not would be buying mine. Now those amreicans would be back on unemployment, my investors would be screaming, and my competition would be buying up my equipment on the cheap so they can ship it offshore and expand their operations.

At some point, wages should more or less level out worldwide.
Until that happens, manufacturing is going to minimize human labor wherever possible, and go to the lowest practical labor cost.

What's forcing us to do that? YOU the consumers.

I'm an employed american. I stay that way by educating myself (instead of watching TV or bar hopping) so that the value of what I do is quite high.

I'm fairly certain that the switch does nothing but increase the
charging current for NiMHs, which usually have higher capacities than
nicads.

Since yesterday, I've heard of yet another failure of this charger,
and again the problem was that it wouldn't shut off, this time for a
whole 24 hours.

Windows XP is probably messing with your serial ports.

I've had the same problem with industrial programming software.

My solution was to go into the computer BIOS setup and manually
configure COM1: for address 3F8, IRQ4.

When you leave a COM port on 'Auto" Winblows can assign the COM ports
strange IRQs (like 12) which confuses the software.

A microwave link is a connection used between two stationary land stations. It's a point-to-point hookup usually with very directional dish antennas at both ends. The very directional antennas and low power (2 to 5 watts) make monitoring very difficult unless you happen to be right between two stations and your antenna sticks up in to the tight beam signal between the stations. Most microwave links are far above the frequencies a scanner can pick up. 6GHz and 23GHz are common link frequencies, although anything from a couple GHz up is considered 'microwave.' (some manufacturers make 900MHz links and call it 'microwave' but from what I've seen these 900MHz systems are used mostly for broadcast AM & FM radio station studio to transmitter links.)

In my area the state police use a microwave link system to connect the main police dispatch offices to the substations and to interconnect the substations..The main office has a 350 foot tower with several dishes pointed at district offices. Each local district office has a 100-150 foot tower with a dish aimed at the main office and one or two dishes aimed at other district offices. At each substation the microwave link is connected to three or four systems. One is a 'teletype' sytem they use to transfer BOLOs and general information like schedules and reports to and from the substations. The second connected system connects to the base station radios at the substation so the main office can remotely use the substation radio transmitters and receivers to contact cars that are outside usable range for the radios at the main office, which dispatches for the whole state. The third connected system is a reserve telephone connection so an officer can pick up a telephone in the substation and connect to the central dispatch office or other substation without relying on easily overheard radio traffic or sometimes unreliable or overloaded telephone systems. They use strings of 'touch tones' to select between the teletype system, telephone system, and to control the radio system. The fourth connected system is a repeater that's used to send the signal on to another substation by microwave link.

As far as the legality of listening to a microwave link- it's probably in the same category as listening to the local police on a scanner. Many microwave links have gone fully digital, so all you hear is a big hisssss or buzzing sound.

The local state police microwave link system is mixed digital and analog. (It's a 20+ year old system - some of the base station radios are still using 250 watt vacuum tube transmitters!) The cars around here usually have 3 radios, one in the 39MHz band, one 150MHz band and one 450MHz band. 90% also carry cellphones. The telephone link is

analog with scrambling capability (they don't use scrambled much because it doesn't seem to work very well- they'll generally give up on scrambling after a few minutes and you'll hear one party tell the other "Send it to me on the !!##$%^&* teletype." The radio system link is analog (voice with strings of touch tones to change channels, key and unkey the transmitter before and after each transmission) but the teletype is encrypted secure digital at 9600 baud.

Does that mean I could have just screwed the existing coax into BNC without re-terminating??

>

MPT1327 is a bit tricky (unlike Motorola Smartnet), because the
network does not transmit absolute information of the next channel
frequency, only a relative index number. What makes it worse is that
the control channel does not transmit the index either. You need to
know the control channel index, from which the absolute starting
frequency of the trunking network can be derived. The method of
obtaining this is by trial and error. You need to follow the rather
cumbersome procedure described in detail in the manual, but there does
not seem to be any alternative. It does work, but takes a lot of
patience. Once it took me almost two hours of experimenting to find
out. I almost gave up, did it one more last time, and then bingo! The
system sprang to life...

Just call it "TETRA-SCANNER" or "TETRA-HACK" that will help to boost the number of visitors.
I understand that DIGITAL-SCANNERS also covers the APCO system.
I think TETRA deserves its own group ...we have to work much harder then the Americans... they have all the work done by
Uniden and RadioShack.

I hope you dont mind that i repost your message in "nl.radio-scanners" ....(Tetra is starting here in The Netherlands and quit HOT
at the moment).. see my efforts ...sorry that they are in dutch !

I think its going to be very difficult to keep such a group alive , not many believe in the dream of finally
being able to really intercept , follow and understand the Tetra transmissions/communications/conversations

If you believe in such a dream or not , wouldn't be important to me ...trying to beat the system is always exiting
and interesting !!

I would be the right person to organize such a group ...and ...with the right motivation !.... but i'm getting to old

Maybe i could be an assistant and provide help and info ?

I wouldn't be surprised. The charger does charge at a rather high rate, taking 8 hours to recharge NiCd cells. I like to take it slow, using 14-16 hours for that. The charger has a timing circuit that is supposed to cut off after 8 hours.

The charger has a one year warranty. For the first 30 days, you can exchange at the place of purchase for a new one, but after that, you have to send it the company HQ on Long Island. Also, you have to pay $10 for postage and handling: this for a scanner that is free after the rebate. No way.

I guess what that means is, 30 days from now, I could open it up and see how to modify the circuit. As long as the case and transformer are good, I could improve the circuit as I saw fit.

Best wishes.

Transformer??? Someone makes a battery charger with a TRANSFORMER?? I
haven't seen one of those made in about 10 years.. all seem to be made with
either switchers or cheap supplies that just regulate the line voltage
down..

What really bothers me is that he is getting packages at this address!!! The Canadian postal system is quite strange. I'm beginning to suspect that the city is ignored by the postal employees (kind of like the US system), and the only thing that is valid is the postal (zip) code. The street address is the same as it has been when he was heavy into scamming two years ago. The city was Keene back then. Mr Munroe trys to keep search engines confused by changing the city. I have to admit he has this scam down quite well. I contacted him and he seemed like a very friendly "good ol' boy" and even sent me JPG's of the radio he was wanting to swap. We exchanged several emails BSing about different subjects, and I finally agreed to take a chance and send the radio up to him. I was duped by one of the finest con artists I have ever ran across! What me do search on his name? He seems like such a nice guy!!! He must be for real. WRONG!!!! This guy is a complete thief!! Don't trust him!

I've been contacted by several persons who were in the middle of deals with "Dave" and realize that they have been taken. His email addresses of Homesteaders2003@yahoo.com and homesteaders2003@yahoo.com are both now saying "No such user", so apparently he has discontinued these.

One person was kind enough to send the number of the Peterborough County OPP (Ontario Provincial Police). They can be reached at 705-742-0401. Please contact them if you've been ripped off!!! Even if your in the middle of a deal with "Dave", please call them. You won't receive whatever you have sent for.

Also keep an eye on Ebay or Yahoo auctions for your items. This is the quickest way for this thief to move the items. Post his auction ID to this thread if you spot your gear. If you correspond with anybody with this particular address then post his email address!!!

Repost of old info, but it might help to put it into this thread.

A serious warning about Dave Munroe, Internet scammer, living in
Keene, Ontario, Canada. In addition to Internet and eBay theft, he's
now added mail fraud to the list. He sends letters of payment,
supposedly with cash payments, but there's nothing in the envelope
except the actual letter. A police officer he scammed opened one of
these in front of Postal Employees, mail fraud charges are being
filed.

If you have ordered anything and sent payment to one of these two
addresses, you've been scammed:

Dave Munroe Alternate Address:
R.R. #2 Keene 220 Paudash Road
Ontario, Canada Keene, Ontario Canada
K0L2G0 K0L2G0
(705) 295-4688 (705) 295-4612

He has also used a Peterborough address and several alias names for
eBay auction site bidding, where he "bids up" his own merchandise,

receives payment, and sends nothing. Two people so far have lost over $100 each on eBay purchases, several others are possible victims. The eBay site management has been notified of his aliases and activities, but he uses falsified user information to avoid capture.

17 verified incidents of Internet and eBay auction theft are known so far, and more possible... we're waiting for email from several more.

This guy advertises for sale or trade of computer, ham radio, electronic, and camping gear. He NEVER sends his agreed part of transaction, money or goods, and after the shipment arrives, he never answers e-mails and the phone number is never answered (used to be a BBS line he ran).

In August, he has scammed a half-dozen people for hard drives and modems. In addition, he's recently been advertising Asus motherboards and a Cyrix mini-tower system in non-forsale newsgroups, since warnings have been issued in all for-sale areas.

He has used these aliases for email, auction sites, and Internet theft:

Beliver@mailtag.com
Doc@mailtag.com
Radio456@mailtag.com
Midnight@mailtag.com
canoe@mailtag.com
camper@mailtag.com
Quake99@beer.com
Quake99@ductape.com
ont@nettaxi.com
dave_ontario@yahoo.com

If you are doing ANY business with someone in the Keene/Peterborough area of Ontario, BE SURE you have good contact info with your party... contact both work and home phones and addresses, etc. This guy seems to have a few available phone numbers, and at least 3 mailing/shipping addresses.

If you've been involved in a fraudulent sale with Dave Munroe, please contact tedblankenship@worldnet.att.net or Rick Park at rickpark@earthlink.net . Complaints have been filed with the Canadian authorities, and various Internet authorities and email providers

If you were "smart", you'd learn to spell (or at least turn on the
spellchecker) before you try to post to a newsgroup. You just make
yourself look stupid!

The REAL Bill Cheek passed away some two or more years ago. The bogus "Bill Cheek", (probably Fred) is sullying his good name.
The bogus Bill cannot hold a candle to Mr. Cheek's accomplishments.
That is what bogus people do. They cheaply usurp the names of others because their own names are exercises in falsehoods.
I wonder what W4JLE would have to say about this...IF he were to have anything to say?

dit dit dit dah......

<snip>

No offense intended, but your group only has 11 members. Chances are, more than half of those members don't even know they ARE a member anymore, due to the fact that there has been NO activity at all on your group (7 posts total - in 3 years).

BOTTOM LINE: Just delete it. Before you do, send a message to the group that there is a group called "DIGISCAN". It has been on Yahoo! since September of last year and has over 600 members.

The link to join is

http://groups.yahoo.com/group/DigiScan/join

(no, 'digiscan' isn't MY group :))

Deleting your group will cause minimal if not NO damage, as long as you point them in the right direction.

Aside from all the filthy wording some of you have used, let's really tell it how we, the American Public see Ms. Stewart.

Everything she did is and was for "Martha" and "Martha" ONLY.

She is no different than any other person in our country. We want to make all the money we can.

She should not be receiving any special treatment by the FBI or any other law enforcement force.
I.E.: Taking her in a back door of the Federal Building to be printed. That was wrong. Would they take any one else in the back door? "NO".

She is going to prison, like it or not.

Nice email, Dwight. I have the telescoping whip as well as the stock antenna, and you're correct that there is no noticable difference throughout the majority of the spectrum. The whip picks up slightly more in the low end (around 30 MHz), and is a little more lossy in 800MHz (with additional hiss, too - which is annoying).

I frequently use the radio shack "deluxe antenna for handheld scanner" (20-034) which is a few inches longer then the stock pro-95 scanner, though I believe the price has recently gone up on this.. (I don't remember paying $17 for it). Works great, though.

Yo, Lloyd- it's 'Letterman'. Before you remind others (like myself)
about spelling errors, suggest you clean up your own typos.

Oh. So Letterman is now the be-all and know-all? The final arbitor of
jurisprudence? Give your head a shake. He's a celebrity too, and
contrary to popular belief celebrities DON't know everything once
they've stepped into the limelight!!

>Dave is rich and he is smart and he knows that a bunch of opertunists

Both numbers are working. The 705-295-4688 just rings and rings with
no answer. His "cell" number of 705-313-1518 says "party is
unavailable".

He hasn't had anything to say in quite sometime. I can't remember seeing anything from him on here since he whined to me and my ISP that I said some naughty words on here. I think it was something like, "You're using that langauge and my grandson is here reading with me."

Oh boo-hoo. Cry me a fuckin' river. His crybaby tactics didn't work though. This is what I think drove him over the edge.

I opened up that Columbia charger, and it did have an approximately 1"
cube transformer inside it. I think that they had to include a
transformer because the battery contacts were so close to the surface.
The sticker on back said that the charger was built to a a certain UL
standard, but it didn't say it was actually UL approved. However, it
was CSA approved, which I've read is just as good. The charger had a
14 or 16-pin chip inside, but I didn't look at its markings to tell
what it did.

What does this have to do with Shortwave? I do not understand why
people say how much they hate off-topic trolls, yes they are trolls.
And then they go off and make off-topic posts of there own. There are
other fourms where this can be discussed.

Welcome to my killfile, man it's getting full.

I don't know about Michigan however the website said Scanners are
illegal in Florida. No so! You can have a scanner, you carry one with
you. You can carry a handheld scanner without a problem.

You can even have one in your car as long as its not connected to an
antenna mounted on the car or is connected to the cars powersupply.
However even in a car you can have a Handheld scanner without being
illegal. Here in Florida if you do have a "mounted" scanner in your car
you do have to have a ham license.

George

[A few hours later]

Yes, there is a transformer inside. There is also a printed circuit
board with an IC, a few transistors, and a few resistors. I have not
pursued the matter any farther than that. It appears well enough put
together.

Makes sense. We have about 1/10th the crime the Excited States has in the
big cities. 1/10th of the total length of
freeways that the U.S. has. Probably less.

To us Westerners, Toronto is a joke, and so is Sheila Copps and Jean Cretien
the Prime Minister.
The Senators are a joke (the political ones, not the Ottawa NHL hockey
team).

> When it comes to jokes, I would sure hate to be a Newfie,
> Italian, or a redneck :)

They're off limits. Shelia Copps the Minister of Multicultralism put that to
rest.

Besides take comfort in knowing that America's sport - baseball - uses alot
of Canadian made baseball bats.
Even those major league players use alot of them. One or two of them was cut
open to see if Sosa corked them.

Canada also delivers hydro electric power to the Excited States and alots of
it, plus paper for newspapers an' stuff.

So what does Canada get in return? Quality things such as..

The Bachelor and The Bachelorette.
Jerry Springer.
Oprah.

Another CBC news backgrounder by David Halton our man in Washington D.C.
about a major political influence in the U.S. today, someone who is a far
larger political influence on people than Geor' Dubya Bouusch.

Hillary Clin-ton.

By the way boys, it's "zed", not "zee", and a toque is a hat.

But we do enjoy our U.S. made Uniden BC245XLT and Uniden BC780's.

So why did the dumb American cross the border?

PK (from Canada's most beautiful province, B.C.)

Giving advice on a cable show is an affirmation of values?

> Martha Steward (The Public Persona) to many (most) Americans
> represents the right way of 'living the good life' of traditional
> personal values and wholesome family values. Preaching the "Art of
> Being" a Good Home Maker and Being a Good Hostess.

Where are you getting this from? From what I've seen of her
show, she gives advice on cooking and decorating -- nothing
(good or bad) relating to "values".

If, on her show, she told you to put whip cream on cranberry
popsicles, what "values" would she be passing along to you?

> To the Women's Libbers and the Left Wing Press:
> - - - Martha Steward's "Public Persona" is everything that is wrong
> with the traditional role of women in the American Family and Society
> as a whole.

Even the "public persona" is a myth ...

Insider trading is different from other white collar crimes:
it strikes at the sacred heart of capitalism (IOW, this
particular white collar crime particularly offends the rich
and powerful) -- and it most certainly is prosecuted (ask
Sam Waksal).

2090. Panasonic Digital KX-TG2214W

Newsgroup: rec.radio.scanner
Date: 2003-06-12 06:17:05 UTC
From: newb <no@email.com>
Message-ID: <ok5gevsi2kdeg0bhdht8svb6pvutpmdaav@4ax.com>
Source record: 29721

Hi,

My knowledge of scanning consists of the 2 days I've spend googling through your group. I wanted to get a 2.4 DSS phone or at the least get something better than a 900 Analog to prevent easy access to scanners.

I bought a Panasonic KX-TG2214W Cordless phone.

The box lists it as a "2.4GHz Gigarange Digital Cordless Phone"

I read some posts that indicated that some Panasonics transmitted on both 2.4Ghz and 900Mhz, so I went through the instructions to look for any mention of 900 transmission.

The specs list the following

Base Unit Frequency: 2.402GHz - 2.480GHz

Handset Frequency: 2.402GHz - 2.480GHz

so it looks ok on that issue (to me). but it does have a channel button.

It also mentions something about having a million of possible codes and the codes being reset each time it's put in the base.

I've got a couple of questions - what does it mean for my phone to be Digital as related to scanning ?

And what does it mean having a 'channel' button - I thought the digital phone would hop frequencies without my help.

Thanks.

> a hero.

Perhaps you should learn to spell!

>> persecutor?
>
> There is more than one persecutor but I was trying keep it
> simple for you. you need to learn to pay atention better.

What's "atention"? Is it something to do with camping?

> Bottom line. Martha will go free.

Who cares? Martha Stewart is a criminal, and has been caught. Whether she goes to prison or not will be decided by the price of the lawyer she can afford, and will have NOTHING to do with Letterman.

Other criminals who have to be indicted and tried include "President" Bush (war crimes), Colin Powell (war crimes, aiding and abetting an enemy power, insider trading), and most of the senior politicians in both the USA and the UK should be prosecuted....

Remember - you can always tell when a politician is lying - his mouth's open!

That is probably about typical. A longer antenna will slightly improve performance on lower frequencies with some loss on upper frequencies. I think I've tried just about every portable scanner antenna ever made (an obvious exaggeration) and was dissatisfied in some way with just about every one. Lets face it, it is darn hard to make a single small antenna that truly covers that much radio spectrum well. Every single antenna is a compromise, so the only thing one can do is make the compromise work best for your own individual scanning preferences.

Yes Bill that is up to date and infact here is the rest of his info:

Bill Conduit, Age 54
newknews@msn.com
myway@ix.netcom.com
uknow@ccnet.com
76601.713@compuserve.com
408 13th St. # 229

Oakland Calif 94612

I was going to post his phone number but my boss said not to ;-(For a guy thats 54 he acts and sounds more like a 5 or 4 year old.

And I have now setup his latest nickname in the garbage can so I don't even download anything he has to say.

I agree gw. I just posted all of the info to help any others who might be approached by this idiot or be inclined to answer a post that might sound to good to be true. This guy will poke his head up again soon I'm sure. He needs the money to support his dope habit (he is a regular in the alt.drugs.pot group and likes to grow his own). He also claims to have a 230 acre "farm" in the area. Perhaps some truth has leaked out in his posts.

2099. NASA KSC TrunkSystem Talkgoup Info and Local Digital Boeing freqs

Newsgroup: rec.radio.scanner
Date: 2003-06-12 16:58:48 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3EE8B148.5020704@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 29730

After doing some monitoring of the NASA Kennedy Space Center 400 MHz Astro Digital Trunk system I've come up with a list of current active talkgroups used on the system. Many of the talkgroups are being simulcast on their older VHF frequency, when possible I've included the simulcast frequency.

You can find a complete list of current/accurate frequencies for the Kennedy Space Center system at www.TrunkedRadio.net. Remember when programming your BC 785D or BC 250 you need to correctly enter the BaseFreq and Spacing. Also the default settings for the Digital card seems to provide good audio quality so you should need to change the defaults.

Being that the Delta II Mars launch took three days to get off the ground I had a chance to spend a lot of time near the Cape at my favorite expendable rocket viewing location. While there I tired to collect as many talking groups as I could using one scanner to scan the old VHF freqs. and a second scanner to scan the digital talk group (see mobile setup here: http://www.milaircomms.com/shack.html).

Also worth noting, sometime ago there were a few 400 MHz freqs posted by Robert Wyman to the groups which were licensed to Boeing. I've discovered that two of them are being used by Boeing in P-25 Digital mode. 452.1750 and 451.9250 are in digital mode and the BC785D will receive them with good audio quality.

Here's a list of what I've personally monitored on the NASA system:
10288 Control, Security Launch Console (simulcast 173.6875)
10320 Medical Net 117? (simulcast 173.4375)
11536 Repeats NASA Tower Comms - ground side of comms(simulcast 165.6125)
10304 NASA Safety Net 105 (simulcast 173.6625)
12496 Launch Support (simulcast 162.6125)
14096 Utilities (simulcast 171.0000)
672 Xray On/Off?? 5/28 talking about touch-n-gos and radar settings
1936 Control, Security Launch Console (simulcast 173.6875)
5472 CCAFS Safety (simulcast 163.5125)
336 Base Ops (NET 107) (simulcast 170.1500)
18000 unid
13776 Possible Photo Net
34576 ??
18192 Weather Ops
416 Channel 3 of Base Ops NET 107
11712 unid "testing"
11696 unid "sounds better in left channel"
9936 KSC Public Relations (simulcast 163.5375)

18080 Possible KSC TV crew
10272 Utilities Base Ops (simulcast 171.0000)
10384 Pad-B Safety (simulcast 173.4625)

It's kinda' interesting that this system still makes use of 3/4-digit takgroup numbering - considering the proliferation of 5 digit talkgroups here. Are those part of an older (non-digital?) trunked system or something?

I don't think they are part of an older one. To the best of my
knowledge KSC never had an older non-digital system.

2109. A Technological Step Backwards - Last Concord flight, No More Night Shuttle Launches

Newsgroup: rec.radio.scanner
Date: 2003-06-13 01:27:31 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3EE92883.6070609@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 29740

Please excuse me as I reflect on the pastï¿½.

Today is a sad day for aviation fans. It seems like weï¿½re going backwards in the world of science and Technology. When living in Pennsylvania I remember many times hearing the Concord working New York and Washington Centers when it came into Dullus International Airport. On many occasions Iï¿½ve seen the concord streak through the Lancaster County, PA skies, if you had a scanner and know when & where to look you could see it go by. During those days it only took 3 ï¿½ hours to fly between the US and France. Today, over twenty years after the Concords first flight it new takes over 8 hours to make the same trip. Seems sad to take such a leap backwards.

Today is a sad day for space fans. If youï¿½ve never got to see nighttime Space Shuttle launch you really missed a sight for which there are no words to describe. And youï¿½ll never get to experience this very wonderful sight. Today NASA announces that there will be no more nighttime launches. This is being done in the name of safety. Kinda seems silly to me, two shuttle accidents and neither at night, but again itï¿½s in the name of ï¿½safetyï¿½. Just two years ago next month I witnessed my first Shuttle Launch which happened to be a night launch. To see the black night time sky turn into a daytime blue color for a brief few seconds is not something words can describe, nor can pictures on TV depict with the same emotion as seeing it live in person. I feel really sorry for those who never seen this great sight from within 10 miles of the pad. Not really is this a step backwards in technology but it certainly is not a step forward. Sometimes when thinking of what we did in the 1960ï¿½s and seeing what the space program does today does make one think. Its been over 30 years since man left earthï¿½s orbit now that is a step backwards in the space program. Itï¿½s been over 30 years since weï¿½ve launched anything as large as a Saturn V to me that too seems like a step backwards in the space program.

If youï¿½ve ever had the chance to witness a Saturn V launch and a Shuttle Launch as I have I donï¿½t need to tell you which is more impressive, not even closeï¿½..

George

Just don't get stopped by the police and you won't have a problem. The police isn't going to stop you for having an antenna on your car, they can't tell if its CB, Ham, business, or what ever. Having an Antenna isn't illegal, having it hooked to your scanner is. So if you get stopped just quickly unhook your antenna.

I've had an antenna and scanner for 2+ years that I've been living here. Never had problem, but than again I don't speed, I use my turnsignals (a lost art in America!) and don't do anything to give cops reason for stopping me....

In a weird sense, I know what your talking about. I have never witnessed a space launch, but I have witnessed something I hope and pray no one ever will see again.

Many years ago, my parents took my brother and I to Las Vegas. While we were there, they set off a night time, above ground, nuclear test. People were told to look down and close their eyes at the time of the initial blast. We were in our car, and I swear I saw the carpeting of the car through my closed eyelids, it was that bright. Then seeing that awesome mushroom cloud with colors that defy descriptions, crimsons, blues, reds, greens, etc. I don't remember if we heard it or not, but the desert was as bright as day......

Before and after that test, we use to watch Mt. Diablo be backlit by the atomic tests in Nevada. Mt. Diablo is in the San Francisco Bay area. Atomic test really were that bright. Seeing how it's over 4-500 miles away, and seeing that false dawn at 2 in the morning.....man what a rush.....

Eric

No offense taken - in fact you you raise an important potential
misunderstanding.

This is NOT a developed list - frankly I'm surprised there's 11. I
did not mean to infer that there was a built in audience to go with
the list. It's quite the opposite.

My hope is that someone will develop the group from its NON-developed
status, and I am hoping that someone qualified will seek to do so.
The value in this effort is not to offer someone control of a large
existing communication vein; It's to make some reasonable effort to
keep the highly relevant name among scannists in a controlled
transfer. I have no real problem with just deleting it as you
suggest, and would if I didn't have at least one taker on standby.

Since the group you mention does have so many members, perhaps it
would be possible to advertise my post to it.

Got to see the British Concorde when it was at the Abbotsford International Airshow in 1986. Made quite few beauty
passes for the people at the show and got quite a few pictures. It is sad, as the Concorde is magnificent looking bird.

At that same time, there was special trips available aboard the Concorde. It would fly out west from Vancouver International Airport and once past Vancouver Island it would blast to just over the speed of sound over the open Pacific for about 10 minutes or so before returning to Vancouver International Airport. Can't remember what it was, but I think a ride aboard that trip was about $200 a person. It flew at its normal cruising altitude so that the people aboard could see the curvature of the earth asnd see a really dark blue sky. Didn't go but from what I read in the paper from those who did, it was pretty cool.

The Abbotsford International Airshow is held at an airport about 40 miles east of Vancouver B.C. every August and attracts
thousands of aviation fans. The show usually has the Blue Angels, the Thunderbirds have been there a few times plus our own Snowbirds, plus it was the first time North Americans got to see the huge Antonov cargo plane, and Soviet MiG fighter jets. (The Soviet Union was still intact at that time, but less adverse to the West than it was under Leonid Brezhnev) Lots of U.S. Airforce planes, and lots of old WW2 planes such as Lancaster bombers and British Spitfires.

Intend to go this year, BC245XLT in hand, and digital video camera.

Haven't had the opportunity to see a Space Shuttle launch, except on TV.
But have seen those spectacular night time
launches on TV. If I ever went to Florida, sure would like to take in the
Kennedy Space Centre, and maybe even see
a launch when they get the shuttle back in service again.

Used to watch alot of the space launches on CBC's or CTV's feed from CBS
with Walter Kronkite when I was a kid.

I never said they were email addresses, only that I had corrected your awful spelling. Learn to read. Now that you know the proper spelling, YOU can research the addresses. Twit.

>but that is off the topic and you know it.
No it's not. It's right on topic- you said those people would be able to clear her and started off on a decidedly illogical tangent.

>hat this is all about is
>power and knowing pple and even consperacies.

I hope you're wearing your aluminium pie plate on your head. It is said it will clear away negative influences, the voices in your head stop and so on. Isn't that what cops and mental health workers tell the schizophrenics? Try it. Wear a crystal, burn some incense, take your meds.....

>ambitous persicutors to get ahead by singleing out Martha Stewart and
>Dave can start a simular consperacy of his own by using his influnce
>with powerful pple like Busch and Hilory Clinton to get Martha made

>free.

Please take your medications...you are losing touch with
reality.....about half a step from being declared non compos mentis.
>
>It is going to happen. Martha will go free and all your wineing won't
>stop it. have a beer.

Oh so now you're a seer, a prophet, a soothsayer? Perhaps you can
prognosticate lottery numbers for the people here, tell me who will
win the Stanley Cup next year? Are you giving Hal Lindsey and
Nostradamus a run for their money?

....and it's spelled 'whining'.

Now- log off your Mommy's 'puter and go and do some homework now!
(LOL)

2116. Ch3 Canobolas has been timed out by MR Whippy Music for 2 days now ..LOL

Mabey he's talking about the "door bell sounds
transmitter hidden" on the "doorbell repreater"
on 29.680 or when long-skip is in and the doorbell
sounding paging transmitters from Jamaca are bouncing
in via long-path between 43-45 mHz?

Nope - Ch3 Canobolas is a UHF CB repeater in Australia - TX freq is 476.475 MHz, so yes, the relevancy to most of the NGs posted to is damn close to zero.

2122. Two 'shortwave loonies' link(s) - very very funny!

Newsgroup: rec.radio.scanner
Date: 2003-06-13 20:36:06 UTC
From: cha-ching <flocofpig32@yahoo.com>
Message-ID: <3eea36d6@snipnews.snip.net>
Source record: 29653
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave,soc.culture.british

Two GREAT links of pages written by shortwave loons:

http://www.tackamarks.freeservers.com/index.html

This link above is the *new home page* for the
"true believers" of Michigan Militia (jailbird)
Mark Koernkie. Better known as "Mark from Michigan"
he was the MC of the old Intellegence (??) Report
a now long defunct program on WGTG shortwave.
During this time it was on, Mark promoted a rather
novelly kooky idea that the reflective Inventory
Control Stickers affixed to the back of Michigan State
DOT road signs were actually encoded/encrypted
"tactical markers" (tacmar's) that would be used later
by UN blue helmeted foreign troops to round up Militia
Patriots, bible thumpers, Seventh-Day Adventists, bad
Little League coaches, UFO abductees and those bad
people who "cork" MLB baseball bats... (lions and bears
and tigeres OH MY!) Well, ole Mark was tossed into
the slammer for ARMED BANK ROBBERY about two
Years ago, but this did not stop his followers in Michigan
and other "rust belt" states from latching-onto this kooky
theory. Watch out for those nasty road signs with stickers
on the bacsk folks! They're EEEEEEEVIL!!!!!

http://www.tackamarks.freeservers.com/photo2.html

(Note: Just to *prove* just how BAD these road signs
are, take a look at the link above to page 2 of the aforementioned
URL. Here you will see a sign whth two kids on a
teeter-totter, or see-saw, which is, in Mark's militialoon
follower's minds, points to the site of an NCB/WMD
evacuation point.....I KID YOU NOT FOLKS!!!

Finally....what I consider to be THE MOTHER OF ALL
KOOK MILITIA SITES:

HERE: http://www.raven1.net/

Chips-in-your-ass, tinfoil hats, NWO mind
control, goofy garden churches...it's ALL HERE FOLKS!!

A friend of mine described the above
SHORTWAVE LOON page to a
degree which is un-matched in it's accuracy.
Here is his description of : http://www.raven1.net/

"Roy. Just Roy." <soylent_purple@hotmail.com> wrote in message
news:da6fca96.0306130621.3be894a0@posting.google.com...

>Radio Shack would sell !!

Anonymity might be nice, to prevent reprisals from buddies of busted terrorists who remain at large, but for me, living here in New York where they use the electric chair, the only reward I'd need would be a front-row seat to watch Bin Laden being turned into a french fry.

I do, however, find parts of the leaflet you quoted rather interesting:

> Report:
>Suspicious persons cnducting unusual activities
>Individuals establishing businesses or roadside food stands in proximity to
>marina or
> bridge

So, if I start a bait and tackle shop to cater to fisherman as they near the marina, I'm going to get harassed by the authorities for doing something suspicious? Hmmm...I think selling fishing equipment and bait in the middle of the desert is what they ought to consider suspicious.

>Unknown persons photographing or creating diagrams.

In other words, don't get caught taking a picture of the 300-pound marlin you just caught? Or drawing an illustration of how to use the metal strip that goes all the way around the top of your house as an antenna for catching some great ute DX?

>Suspicious venders attempting to sell/deliver merchandise or drop off
>packages.

Hey, guys, get a load of that fella over there - brown panel truck...wonder if it's loaded with diesel fuel and cow chips? Brown uniform...didn't some of Hitler's boys wear brown shirts back in the day? And he's carrying some sort of electronic device he calls a DIAD (for Digital Information Acquisition Device), but what if it's really the detonator for some improvised explosive devices, perhaps hidden in

some of all those strange looking packages he just drives up and
leaves on people's front porches every day, without even getting
anybody to sign for 'em.. Guess we better call the cops on the ol' UPS
driver, eh? :-)

Vic: I just won an auction for above mentioned speaker.

The speaker came with bare wire - and I'm not that swift when it comes to
car installs.

what wires went where in your case? I'll adjust for MY car. Also: how
did you MOUNT it?

Any help would be appreciated.

Solder a 1/8" phone plug to it and stick it in the EXT jack on the back.

Well I guess if YOU say so, then it MUST be so, huh?

I won't rip into you the way I would if you were in full control of
your faculties. I actually feel sorry for you- alone in a room with
nothing better to do than stand up for Martha Stewart (awful spelling
notwithstanding), the blue light of the moniter reflecting off your
pale skin, empty soft drink and fast food remnants everywhere...and
tears of anger rolling off your face and you read the replies to your
simpleton posts.

Your hollow, shallow, empty life is unspectacular in all respects: you
identify with a greedy, stupid woman whose hunger for power is
legendary, and whose time has come for an orange jumpsuit and
handcuffs.

You're a lonely, sad individual with absolutely nothing going for you.
Get a life. Borrow one if you have to.

Will you commit suicide if Martha goes to jail?

Welcome to my KF. In your case 'it's a good thing'.

:) If it was THAT easy, I wouldn't have asked for help. This is an
amplified speaker, so I am not only referring to the audio part, but the
power part as well! (not to mention, the speaker doesn't have an EXT jack)

I have a RED wire, a YELLOW wire, a BLACK wire, a WHITE wire, a GREEN wire,
a BROWN wire and an UNSHIELDED wire (around the brown)...

Thanks for trying to help, though Scott... I appreciate it!

I went out and bought the CD-to-cassette adaptor and it works great! While I can't listen to the AM/FM at the same time as the scanner, I don't find that to be a problem. The adaptor is around 20 bucks at Radio Shack, 15 bucks at Wal-Mart. Or for around $30-50 you can buy a portable CD player w/car kit that includes the adaptor, and then you'll have a CD player for you cassette-equipped vehicle.

I plug my Trunktracker into the MP3 jack on the front of my car stereo.

140 watts of public service action. I can hear my scanner with the top
down at 60 MPH.

2175. Re: A Technological Step Backwards - Last Concord flight, No More Night Shuttle Launches

Newsgroup: rec.radio.scanner
Date: 2003-06-14 19:27:08 UTC
From: harvey <hdjames@bellsouth.net>
Message-ID: <04LGa.3154$681.3068@fe08.atl2.webusenet.com>
Source record: 29606

hiya george
i know what you saying about the launches, i am one of a handful of folks
that have had the pleasure of being within 2 miles of the launch pad
during night and day launches on the ocean side, at that distance you can
feel the heatwave from the blast and the vibrations go right thru you as she
takes off, an experience i'll never forget.....
sorry to hear they arnt doing nighties any more
harvey
"GeorgeF" <av8tor@licensed4funREMOVEBEFOREFLIGHT.com> wrote in message
news:3EE92883.6070609@licensed4funREMOVEBEFOREFLIGHT.com...
| Please excuse me as I reflect on the past�.
|
| Today is a sad day for aviation fans. It seems like we�re going
| backwards in the world of science and Technology. When living in
| Pennsylvania I remember many times hearing the Concord working New York
| and Washington Centers when it came into Dullus International Airport.
| On many occasions I�ve seen the concord streak through the Lancaster
| County, PA skies, if you had a scanner and know when & where to look you
| could see it go by. During those days it only took 3 � hours to fly
| between the US and France. Today, over twenty years after the Concords
| first flight it new takes over 8 hours to make the same trip. Seems
| sad to take such a leap backwards.
|
| Today is a sad day for space fans. If you�ve never got to see nighttime
| Space Shuttle launch you really missed a sight for which there are no
| words to describe. And you�ll never get to experience this very
| wonderful sight. Today NASA announces that there will be no more
| nighttime launches. This is being done in the name of safety. Kinda
| seems silly to me, two shuttle accidents and neither at night, but again
| it�s in the name of �safety�. Just two years ago next month I
| witnessed my first Shuttle Launch which happened to be a night launch.
| To see the black night time sky turn into a daytime blue color for a
| brief few seconds is not something words can describe, nor can pictures
| on TV depict with the same emotion as seeing it live in person. I feel
| really sorry for those who never seen this great sight from within 10
| miles of the pad. Not really is this a step backwards in technology but
| it certainly is not a step forward. Sometimes when thinking of what we
| did in the 1960�s and seeing what the space program does today does make
| one think. Its been over 30 years since man left earth�s orbit now that
| is a step backwards in the space program. It�s been over 30 years since
| we�ve launched anything as large as a Saturn V to me that too seems like
| a step backwards in the space program.

|
| If you’ve ever had the chance to witness a Saturn V launch and a Shuttle
| Launch as I have I don’t need to tell you which is more impressive, not
| even close’..
|
| George

I don't know about ICOM's commercial software.

You are welcome to use my tk5 open source software
for the ICOM IC-R5. It works on Linux, MacOS X,
BSD, Windows (95 and later), etc.

It's free and may be downloaded from http://parnass.com

I don't warrant tk5, but it won't cost you anything.

Hey, Al. What is the problem?
Too much time on your hands?
Nobody to talk to?
Getting old?
Wife ignores you?
Friends shun you?
Prostate meds keeping you up?
Arthritis bugging you?
Your Relys causing chafing about your groin area?
Getting old and grumpy is a problem, but why foist your gall off on the rest
of us?

Go to bed, Al. Q.
No wonder you are lonely. You are in your early sixties and are quite the
consummate loser. Life must be hard for an old geezer such as you are.

You are crude, rude, and socially maladjusted, if you continue to antagonize me in this most unscrupulous manner, I shall be forced to rain down impacts upon your cranium, each being more devastating than its predecessor.

(The previous statement is meant facetiously and is not intended in any way as an expression of a desire to harm you or others. Please do not try this at home. [The law department requires this statement prior to posting attempts at levity.])

My my, quite the cross poster aren't we. (speaking of you of course).
Likely this ventures into your dressing habits. (crossdresser).

Best regards sir, and remember, sooner or later you'll pass the seventh grade entrance test. May I offer my congratulations beforehand, I have included your subscription to the AARP as a present to this tremendous achievement.

(The previous statement is meant facetiously). [The law department requires this statement prior to posting attempts at levity.])

EVERY time you solder to the cells, you damage them.
You cannot achieve wetting temperature, without also achieving melting
temperature of the insulators inside.

That damage may or may not cause immediate failure, but it is there, and it
is not reversible.

THE VALUE - Is in the role that She Plays !
- - - The Middle Class Home Maker (Ms Whole Some)
- - - I Am OK and So are You (Its Good To Be US !)

> > To the Women's Libbers and the Left Wing Press:
> > - - - Martha Steward's "Public Persona" is everything that is wrong
> > with the traditional role of women in the American Family and Society
> > as a whole.
>
> Even the "public persona" is a myth ...

The MYTH . . . Is the Magic !
- - - The "public persona" is a ROLE to be 'Played'.
- - - A 'Role' that the Audience can Identify With.

- - - The 'Myth' of Martha Steward is She Is Every Women.
- - - Together "We Are OK" (Normal and Good)

The Female Viewer after 'Watching' Martha Steward and Oprah Winfrey,
"FEELS" that they have Learned Something New to Improve My Life and
Make It Better.
- - - They FEEL Good About Themselves - And That Is Good !

~ RHF

What's the difference between heat and temperature?

Welding puts a very small amount of heat into the can, while raising a small area to a high temperature.

Soldering puts a large amount of heat into the can, while raising a large area to a much lower temperature.

Which group of the ten it is crossposted to would that be?
aus.radio.broadcast? aus.radio.cb? aus.radio.scanner? One of the
other seven?

> And since when were we only allowed to discuss antennas in here?

I would bet David was reading it in rec.radio.amateur.antenna -- also in
the crosspost list.

Look at the attribution above to learn where I read it.

2253. NASA Trunk System Signal Strength Decrease?

Newsgroup: rec.radio.scanner
Date: 2003-06-16 14:51:01 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3EEDD955.70801@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 29532

Has anyone noticed a decrease in NASAï¿½s Digital 400 MHz Trunk signal? Up until Friday (didnï¿½t listen over the weekend) I would receive all the freqs with a full 6 bars of signal strength on a Uniden BC 785D. However today on the very same antenna I only receive 3 bars. The signal is still of excellent quality however just wondering if anyone else noticed this? (Iï¿½ve already checked and no I didnï¿½t switch the att. On).

Thanks
George

Dear GW...you may wish to seriously rethink your obtuse and inane diatribe, lest you look like the complete fool that you no doubt are.

First of all moron, as far as your Canadian teams winning the Stanley Cup...keep in mind that many many players on those Yankee teams are Canadian.

Secondly, you should consider your country's collective education and intelligence when referring to us Canadian "pinheads", if you got your Yankee head out of your own countrys ass and took in some of the world around you (outside your US of A) you would know that as far as the rest of the world goes...you are some of the most uneducated, backward thinking and collectively low scoring (as far as testing goes) bunch of pinheads there are! You Yankees wouldn't know the Louvre from the Parthenon if your lives depended on it! LOL

Thirdly, your earlier comments about our "anti war diatribe" really make me laugh. First off we are still only country to effectively invade your country and burn down your White House...but you wouldnt have a clue about that since all "your" education system teaches you...is how America has only ever been champion of any conflict it has entered! Which brings me to my fourth point...isnt it funny how all this ranting about Canada not joining you in your liberation of Iraq (by the way found Saddam yet?) is such a bad thing and we Canadians are so unsupportive of the US? Hmmm...well I guess your "education" system is lacking again, for back at the start of World War II...YOUR so called "great" country sat on it fat ass while the rest of the free world was fighting against a little guy by name of Adolf Hitler...in fact your country was called upon time and time again back then to help only to sit on it fat ass and do nothing...and only when you had YOUR asses kicked at Pearl Harbour...did you get into the fight. But I guess you were told differently? Something about American jumped into fight against both Japan and Germany with both hands tied behind its back and won the fight entirely on its own perhaps? LOL

Get real, grow up and realize there are rip off artists all over the planet fool.

Source record: 29545

Hi ~ a couple of years ago I read on a newsgroup about enabling frequencies that were not normally accessible on the Pro 51 scanner (from Radio Shack). I tried what the directions said and it worked. Now I cannot remember the code ~ it had nothing to do with opening the scanner or wires ~ it was done by pressing certain keys on the scanner and then turning it off and back on again, then the frequencies you were unable to get were available and you could program them in on the scanner. Does anyone out there know how to do this? It was posted on a scanner newsgroup, but like I said it was a couple of years ago. Would love any info on this trick if anyone knows it???
Thanks, Darlene

2267. Trick with Pro 51 handheld scanner

Newsgroup: rec.radio.scanner
Date: 2003-06-16 23:53:03 UTC
From: drink@some.beer
Message-ID: <90D4JLR137789.0773726852@Gilgamesh-frog.org>

Hold down the 2, 9, and MONI keys simultaneously. The scanner will go into display
test mode. As the display fills up press the 2, 9, and L/O keys
simultaneously and now for the tricky part, hold these keys down until
the scanner opens up on 162.4 Mhz. If this is not the Noaa frequency for
your area, your scanner may just start scanning. Thats it! Cell mod
search Ch 22 and 23 and your off and scanning! Good Luck and hope this
helps others.

2268. 785 .vs. 780 Scan Speeds?

Newsgroup: rec.radio.scanner
Date: 2003-06-16 23:54:57 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3EEE58D1.803@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 29546
Cross-posted to: rec.radio.scanner,rec.alt.scanner

Both scanners advertise a 100 Ch/sec scan rate. However without doing a hard testing using a stop watch it appears the 785 is much slower than the 780. In the past I have timed the 780 using a total of 300 programmed channels and it does work out to 3 seconds.

Also it appears that the 785 will miss a channel when there is a signal on the first scan requiring the scanner to go thought all the banks and sample the missed channel for a second time before breaking the squelch. When having the 780 and 785 scanning the same set of freqs the 780 will ALWAYS stop first. A good example I can provide is when scanning NORAD freqs. I have 107 NORAD freqs which I scan. Exact same freqs programmed in a 780 and 785. The 780 will ALWAYS stop on activity first. Are the squelches different?

Actually there are several test modes in the PRO-51 (most of these comments should be true for any Uniden-made Radio Shack scanner, such as the PRO-46).
I☐ll describe them first and then how to take advantage of one of them to get
the restricted frequencies.

are three data test modes. These modes completely destroy any frequencies you had programmed into your scanner, so it☐s best to use these techniques before you program your scanner. If you have already programmed it, you☐ll have
to decide if these new capabilities are worth reprogramming.
MODE 0. Clear the scanner.
----- well-known method of clearing the scanner to all zeros is to hold down the 2
key, the 9 key, and turn on the scanner. All frequencies will be lost.

```
TEST MODE 1. Fill channels 1-25 with test frequencies.
- the 2 key, the 9 key, the L/Out key, and turn on the scanner.

Thi fills channels 1-25 with these frequencies:

30.050
2 40.840
3 49.900
4 138.150
5 162.400
6 173.225
7 406.875
8 453.250
9 511.9125
10 108.500
11 118.800
12 127.175
13 135.500
14 66.450*
15 76.825*
16 87.425*
17 157.800
18 482.3625
19 29.000
20 54.000
21 806.000
22 857.200
```

23 888.96*
24 911.500
25 954.9125

* indicates not within the PRO-51□s normal coverage. More on how to use these in
a minute.

TE MODE 2. Fill channels 1-17 with test frequencies.
- 2, 9, Manual

Fills channels 1-17 with these frequencies:

30.00, 40.00, 50.00, 140.00, 155.00, 170.00, 410.00, 460.00, 510.00, 54.00,
109.00, 118.00, 127.00, 135.00, 810.00, 860.00, 950.00.

Ther is also a display diagnotic mode.

TEST MODE 3. Display Test.
------------ 2, 9, BAND or 2, 9, MONI.

This put the display in test mode. Every annunciator and every digit element is
turned on in a scan from the left side of the display to the right. To keep this
test mode continuous, release the buttons before the first scan finishes. This
mode does not affect stored memory. Press any key to exit this display mode.

Now, if you□ve decided to try test mode 1, you will find several out-of-band
frequencies stored in your memory channels. Channels 14-16 hold frequencies in
the blocked-out 66-88 Mhz range, and channel 23 holds a frequency in the
blocked-out cellular base range. Once you have these frequencies stored in a
memory channel, the PRO-51□s direct search feature will let you search though
these ranges. In the cellular band, the scanner searches in the correct 30 Khz
steps.

You don□t have to keep these frequencies in the channels they were stored by the
test mode. You can move them to any channel in the scanner. Here□s how.

First move the frequency to a monitor channel:

Whi on a channel with one of these frequencies, open squelch completely. Press
direct search button, either up or down. The direct search button puts the
scanner into search mode and the open squelch holds the frequency. Then

press
the Monitor button. The frequency is now in the monitor channel indicated in the
display.

Now you can move it to any regular memory channel in the scanner:

Enter the channel number
Press PROG
Press MONI
Press the number of the monitor channel if the proper channel is not displayed.
Press E(nter)

The frequency is now permanently stored in the memory channel. You can do a direct search from this memory channel at any time.

The 66-88 Mhz range mainly covers TV audio. However, there is a strange phenomenon concerning TV audio and the PRO-51. Channels 4, 5, and 6 fall within
the 66-88 Mhz range (71.75 Mhz, 81.75 Mhz, and 87.75 Mhz respectively), yet the
PRO-51 will not pick up the audio frequency while searching in this range. However, TV channel 2 audio is at 59.75 Mhz. When you add the intermediate frequency of 21.6 Mhz, you get an image of the TV channel 2 audio appearing at
81.35 Mhz. This does come in, although raspy, since the PRO-51 is receiving in
narrow FM mode while TV audio requires wide-band FM mode for proper reception.

I be interested if anyone can verify that any of these test modes work on the
PRO-46 or any other Uniden-made Radio Shack scanner.

Hello,
I just bought a old Johnson Duoscan 8 crystal scanner at a yard sell and it does work except channel 1 it will not light and you do not hear anything when I put in the local pd crystal in that slot. Any Ideas???

Also I'm looking for some crystals for this scanner.
155.745 155.580 154.680 155.370 147.030

If you have any of these crystals for this scanner please email with a price to qdarts@yahoo.com

As mentioned in my recent BC785D and BC250D
reviews in Monitoring Times, the
memory scan speed varies depending
on how you program the channels.

You can speed up the scan if you program
the channels in frequency order.

These 2 new Uniden models do not sort
the frequencies automatically before
scanning as did some of the earlier TurboScan
models (e.g., BC895XLT and BC9000XLT).

Did they sort freqs. in the BC780XLT?

I just took one of my 780's, programmed channel 1 to be our local airport ATIS freq which has a continous weather broadcast (120.0500 MHz AM). Channels 2 thur 300 were programmed with a mix of UHF MilAir (225-400 AM). When the scanner got to channel one it stopped as the ATIS freq will always have a signal. At the very same time I hit the "scan" button I start my stopwatch. As soon as the scanner stops back on channel 1 I stop my stopwatch. I did this 5 times, the fastest was 3.1 seconds (96.8 ch/sec) and the slowest was 3.4 seconds (88.2 ch/sec). Of course there is about +-.1 of a second error in starting and stopping the stopwatch.

I didn't have time tonight to do the same test on the 785's.

In the above test I made sure that all 300 freqs were programmed and non were locked out.

Question, does grouping all FM's and AM's together affect scan speed?

George

> Did they sort freqs. in the BC780XLT?

You can find the answer by following this
procedure:

1) With the scanner in Manual mode, open
the squelch so you hear white noise.

2) Press Scan (make sure to scan only one
conventional bank, not a trunked bank).

3) The radio should change to a different channel
then stop. Keep pressing the Scan button and
observe whether the radio is stopping on memory
channels in (A) memory channel order, or (B) frequency
order.

Note: Keeping the squelch open slows down the scanning action
enough for you to observe visually.

If you try this test with the BC9000XLT, you can see the
radio scanning the channels in frequency order instead of
channel number order.

I found an undocumented keystroke sequence in
Uniden's portable BC3000XLT which let the user change the
channel scanning sequence -- frequency vs. channel number.
(See my BC3000XLT review in April 1995 Monitoring Times.)

I don't know if there is a similar undocumented feature
in the BC785D and BC250D.

Big fire has been burning all night west of my house in the mountains.
I listened to the fire crew last night when it started until I went to
sleep in the chair and they are still at it this morning. It started
very late at night so something must have started it.
The winds are already up here at my house so the fire could get bad. I
am listening to then move the fire fighters around with the bulldozer
and helicopters.
For some reason the main Kern County disp freq. has been messed up the
last two days. I can hear the units fine but the disp is messed up like
the feed is bad. I get everything off a repeater over here so I think it
has to be the feeder to the repeater from disp.
They will have to fight it without me, I'm heading south a few days.

Well, I guess there IS one advantage AOL has over other ISP's.. no downloading
of newsgroup messages. They stay on AOL's server and I just open them up. If
something is in my kill file, it doesn't list them in the list of messages...

In Xnews press 'K' key with message from user you desire to
killfile highlighted or on view, change '100' in entry line to
however many days you want to killfile him/her, then click on
'Okay' button.

Anyone get a gander at the owners manual yet? Check this out: "Your RadioShack Digital Handheld Scanner features RadioShack's
exciting new 11-in-1 V-Scanner technology. V-Scanner stands for Virtual Scanner. V-Scanner allows you to
build and store eleven separate configuration profiles in V-scanner folder memory. Stored V-Scanners can be recalled, edited and
activated at any time, giving you a powerful tool that allows you to quickly reconfigure your scanner for use in different areas or
applications."

11 virtual scanners? Am I dreaming? Someone pinch me!

Plus support for 3600 Baud AND 9600 Baud trunking. Built in digital, no add on cards, no sound settings needed.... Astro, APCO25P1
and MA/COM decode!

This isn't a scanner folks. This is THE scanner. RS, please don't make us wait until November for this!

Tell me how to stuff 5500 channels into the BC250D and select any 500 of them to scan at one time *without the help of a computer at
the time* and I'll be convinced.

Oh and since 9600 is the APCO P1 standard, I think "those few areas that have" a 9600 system will grow exponentially as new systems
come online.

Don't get me wrong. I have the 785 and 250 and I absolutely love these radios. But I can't stuff 5500 channels in them at once and I
can't trunktrack 9600 baud systems with them (like the one being installed here in Phoenix as I speak). I need both. I need an all
in one public safety scanner that will work damn near ANYWHERE in the USA and the 96 is the closest yet to exactly that. But since
you obviously don't need it, don't buy it. Save your money and get the AOR digital when it comes out for $995 plus tax.

If you could somehow make it your job to download your mail and Usenet
messages, this could be called an occupational hazard. However, since
I doubt that either of us is that unfortunate <grin> let's just say
that it goes with the turf...it's the price you have to play in order
to play on the Internet.

FWIW, though, I use an NNTP client that allows me to download just the
headers from all the new messages in my subscribed groups (or selected
groups). I can then scan the headers, deleting any that I see that I'd
prefer not to waste time downloading the message bodies for. After
tossing out the trash, I then can download message bodies for the
messages that remain. It's a little bit of work to do it this way, but
in the case of extreme troublemakers whose intelligence levels seem to
hover somewhere just slightly above...oh, say, pond scum...I get the
satisfaction of knowing that their drivel never reaches my computer.

Your sexual fantasy is duly noted, sir. However, I and many other
people in these newsgroups had nothing to do with the attacks against
your remailer, and thus do not deserve to be regarded with the
contempt that you ought to reserve for the guilty parties. For shame!

For the love of pants....

This is proof that there is just no pleasing everyone. When the 250 came out I thought for sure the internet scanning community was
going to organize a lynching party because the stupid thing didn't do 9600 trunking. Now GRE fills the gap left by Uniden and you
people still bitch.

It's not "Buy the Ford Focus because it does this one thing really well" - it's "Why buy the 4 runner when the Camry gets you to
most places you'll want to go just as well for less $$" It also just happens to have a feature that I will find useful. VERY
useful...

You obviously don't like the radio, so don't buy one. No one here says you're not a real man if you don't have one. So you save up
your pennies and wait for Uniden to get off their butts and hope they get it right. Meanwhile, guess what? I won't have to! I'll
already have the collective ability among all my radios to do what you are waiting to have all stuffed into one scanner.

The manual on the FCC website says that it can be programmed by a computer with the appropriate software. It appears that RS isn't going to repeat Uniden's mistake by offering it's own software. Instead, apparently they are going to allow outside vendors to develop their own software. The operating system the software runs under will be up to them. Bob Parness will probably write another one of his tk-based programs. I hope Don develops another excellent program like his Win92.

Source record: 29448

Well, let's see. The 96 has Intelligent Adaptive Digital Tracking and user-upgradeable DSP, no need to retune it for each system, unlike the 250D. Automatically switches between analog FM and digital. As for the wide FM to monitor the FM broadcast band and TV audio, why would anybody want that in a SCANNER! I'll grant that the missing Mil Air band is drawback. The 96 uses commonly available AA batteries instead of a proprietary battery pack, and these can be charged in any standard charger, no optional/supplied charger needed. If it follows the previous GRE-made RS scanners (and it looks like it does) the computer cable can be made at home using common parts instead of a proprietary connector. And don't forget the 10 V-Scanner folders, haven't seen Uniden offer anything like this. 9600 baud control channel is "THE" APCO P-25 standard, better get used to it, pretty soon 3600 baud will be the exception. But with the 96, you won't have to choose. The 96 is the scanner the 250D could have been, but wasn't. Hardly a "stripped down" Bearcat. Can't wait for the mobile version!

A question regarding that scanner, is it capable of scanning Michigan's new statewide digital system? I am referring to the one that the Michigan State Police, Department of Natural Resources etc. use. A person I know that works for the DNR specifically states that system is completely impossible to scan. Is that true? If the '96 won't scan it, is there a different scanner that will?

- i certainly hope bob parnass gets a hold of one of these units!
heck, i'd chip in to get him one! his software is top-notch, and
unlike other offerings (which are good quality too, mind you) are
cross-platform - usable under Win, OS X, and Linux (and most likely
for *nix BSDs too!)...

- however, if the unit is from GRE, i don't hold out hope for publication
of the programming protocols, and expect a 'closed' unit... i will
mostly likely get one if it is 'open' and supported by multiple
platforms - otherwise, forget it...

Someone on the group: "Cool scanner!"
Blaster: "No it's not!"
Someone else on the group: "But it IS a cool scanner"
Blaster: "Is not! Is not!"
Yet another person on the group: "I'm gonna get one"
Blaster: "Loser! Loser!"

I see a pattern forming here. No matter what is said about the new RS unit, Blaster steps up talking smack. Maybe Blaster works for
Uniden? ;-)

Well Blaster, everyone's entitled to their opinion. I'm getting the PRO-96 when it comes out and then we'll just see how "stripped
down" it really is. And when the next Uniden digital comes out, I'm getting that one too. So stick a sock in it and stop trying to
pee on RS's parade. No one will ever make The Perfect Scanner. There's always gonna be a guy like you who finds something "wrong"
with it.

Depends. Is it APCO25 Phase 1 compliant? If not then no. If yes but encrypted then no.

>A person I know that
> works for the DNR specifically states that system is completely impossible
> to scan. Is that true?

Well, where does this person work within the DNR? Are they a radio tech or a secretary or a janitor or what? I've had dispatchers on
this very newsgroup tell me their data systems were impossible to scan. But I knew better and proved to them that I did. So just
because they tell you it's impossible doesn't mean it is.

> If the '96 won't scan it, is there a different
> scanner that will?

Sure. Buy the same radio they use and have it programmed for receive only. Other than that, probably not. But as I said, nothing is
"impossible to scan" all that matters is how deep your pockets are and how smart you are.

If you're looking for the mounting bracket that comes with the radio I have several I'll be willing to send to you. I have 7 (5 BC780's and 2 BC785) and don't use the mounting brackets that came with the radio.

Also you name sounds familar and after seeing your rocket page I'm wondering if I know you? Does MountainsideHobbies ring any bells? If not then its my mistake....I use to be big into HighPower.

But OJ's case was unique. Besides being theatre, he said he
was going to do it; the victim said he was going to do it; and the
victim said that he would not be convicted. Then what they both said
was going to happen, happened.
Then the public got to see all the sworn evidence -- indeed,

the public saw and heard a lot of sworn evidence that was presented to the court but was not presented to the jury because the jury was not present at that time.
I think this was rather new...we saw and heard all sworn evidence...more than the jury...so I would think that the public would be a better judge of his guilt than the jury.
Oh, well, justice was done and he is happy playing golf.

Ken Cashion, who would have fried him.

That's the great thing about public opinion. It isn't bound by the same
requirements as a court. Otherwise we would all have to conclude that OJ
was innocent. Personally I think Stewart was guilty of insider trading.
But I haven't heard one shread of evidence in the news that would remotely
prove such a thing. There are so many ordinary people that get screwed by
the legal system everyday that it's not suprising that the public relish
seing a wealthy public figure that a hit.

Yeah, it comes with a charger, but it uses the crappy battery pack so it
loses any positives for that. The 96 will be the one I will buy. I won't
buy a Uniden handheld until they drop the battery pack nonsense.

2343. Police Radio Codes

Newsgroup: rec.radio.scanner
Date: 2003-06-20 02:00:49 UTC
From: beernut <beer@nospam.com>
Message-ID: <ANAIa.754$VQ6.563@lakeread01>
Source record: 29484

Greetings...

Just recently picked up my first scanner.. Does anyone know a good resource for Police radio codes? I'm hearing plenty of activity... just can't decipher it all. i.e. what's a 630V or "630 Victor"?

I understand the phonetic alphabet etc., it's just these codes that are driving me batty! Any help is greatly appreciated!!

Thanks!

2344. Pro96, the Good, Bad and Ugly

Newsgroup: rec.radio.scanner
Date: 2003-06-20 02:11:49 UTC
From: "Rich Carlson, N9JIG" <rich@n9jig.com>
Message-ID: <rich-E777D2.21114919062003@netnews.attbi.com>
Source record: 29474

After reading the draft version of the manual from the Pro96 Yahoo group file section (http://groups.yahoo.com/group/PRO96/) I find the following items of interest. Of course some or all of this
can change since the radio is not out yet. I have not seen the radio other than the pictures out there but the manual is pretty telling so far...

The Good:
1) APCO-25 modulation receivable without needing an add-on card.
2) Handles Motorola 3600 and 9600 baud systems without user intervention.
3) The draft User's Manual floating around the Web looks clear, concise and well thought out.
4) The "V-Scanner" harks back to the old BC-2020, where you had 2 sets of memory available by the flip of a switch. The Pro96 allows you to store 11 sets of scanner memories and load the radio with one memory set at a time. Neat feature for travellers and hard core scanner users.
5) Allows for cloning of radios, either with the active memory set or one of the other sets in the V-Scanner memory.
6) Allows limited firmware updates. While this is restricted to the digital decoder it is a first step in allowing future radios to get firmware updates for other portions of the radio.
7) Control Channel trunking for Motorola 800 and 900 MHz. systems.
8) PL and DPL decoding like the Pro92. (But see # 4 in the Bad section.)
9) Weather Alert.
10) Attenuator that can be set on a per channel basis or to the whole radio.
11) Uses standard AA cells, either rechargeable or not. Gives you the greatest flexibility in powering the radio.
12) Being a Radio Shack scanner with a computer port Don Starr will likely write a program for it. (For those with other Radio Shack scanners, go to http://www.starrsoft.com and get the best software at the best price--FREE!).
13) Priced at about $500 AFAIKN.
14) Alpha tags for freqs and talkgroups.

The Bad:
1) No Mil-Air.
2) No LTR.
3) While the User's Manual jargon is written at a somewhat higher level than others, it seems pretty understandable. Novices may have a bit of confusion however.
4) PL and DPL decoding like the PRO92. You still have to select analog or digital PL modes for the channel instead of the radio just displaying the decoded code and mode. Dunno why they can't get this done right.
5) No Mil-Air. (Did I mention this yet?)

6) Doesn't mention whether it handles 4800 baud EDACS systems like used on many 900 MHz. an UHF systems, so I assume it doesn't.
7) No Mil-Air. (I really think that stinks!)

The Ugly:
1) Look at the picture. If you thought the BC-250 was ugly you will hate this one.

Questions:

1) I read on one forum that the Pro96 would report the system ID on Motorola trunked systems. I could not find support for this in the manual, perhaps I missed it???
2) Will the Pro96 show text tags in trunked search as well as scan? I assume so since RS/GRE scanners use the "Open/Closed" method instead of the "Scan/Search" Uniden uses.

So far as I can tell it should. I have heard the MSP system with my
BC250 and the vocoders are similar so the audio modulation should not be
an issue. Since the Pro96 is supposed to be capable of 9600 baud CC
systems it seems to be.

The misperception that Digital equals Encryption has been propogated by
salesmen for a long time...

Rich,

I agree. Without Mil-Air it doesn't even get consideration. Should at
least compete with the Unidens for freq coverage.

Compared to any of the battery packs that are used by
Icom/Kenwood/Yaesu/Alinco, etc, it's about as crappy as it gets. And I
would still prefer AA batts over any other option..

I couldn't have said it any better.
From what I've understood GRE has had problems making a radio which
didn't allow cell phone images to appear in the MilAir Band. At least
that was what I was told by a RadioShack sales person who actually was a
scanning hobbyiest himself. That was back about 5-7 years ago. I don't
know if that is still why R/S hasn't made a MilAir scanner other than
the PRO-2052 or not. The PRO-2052 is a so-so scanner, lacks ability to
switch to AM mode in the 138-144 range but other than that its ok.

But as many of you have guessed I won't be adding a PRO96 to my line up.
Guess I'll be calling and ordering a few BC 250's soon.....

The other night I heard (at least I think I heard) activity on one Sat freq. It wasn't english and I don't think it sounded quite like spanish. Since I wasn't in the room I can't tell you which freq it was as I have one scanner scanning all the UFO freqs as well as a few others. I know the sound came from that scanner but I just didn't get back to the room in time to see what the freq was.... More than likely it was a Pirate using the Sat....

Hi,

i have a Uniden UBC 280XLT (same as SC 200 in USA). Does someone know keypads tips or how to listen to VHF Mil comm (137-144Mhz range) in AM? Which mod?

Thank you.

Fabien.

No reason to worry about it now. The Frog remailer is gone and thus the
troll is to. Word has it it was the remailers own admin. that was doing most
of the spamming/forging/spoofing.

By the looks of things over at alt.privacy.anon-server alot of these
remailers are seeing problems starting to arise with their services.

While this is not good in the case of people that use them properly it will
possibly get rid of the remailers where the admin. refuses to enforce
against trolling, spamming...etc.

Sounds like it might be Stamford CT. There a 630 is "Found property" so (guessing here) a 630V might be "Found vehicle"?

Found by entering into Yahoo: police codes "630".

Need a little help setting frequencies on an R5. How can one set a frequency down to the last digit or at least to .005MHz The manual shows how to change the increment from 10Mhz to 1MHz to 100KHz but how can you set something down to the .001 MHz or at +/- .005? Or is this not even possible and you just go as close as you can?

Not that it matters but the plan is to use this on a video production that will be using multiple wireless mic's. That's all regular pro gear but someone suggested that a scanner is a convenient way for producers to selectively punch up and listen to the feed from whichever mic they wish without having to mess with a regular diversity receiver of the kind actually used for recording as the freq setting on those is via a tiny screwdriver control. Anyway, we just want to load all the freqs from our mic transmitters and would like to put in the precise freq if possible.

2368. Homemade Indoor Wire Antenna

Newsgroup: rec.radio.scanner
Date: 2003-06-20 23:01:50 UTC
From: Frank <zcjttfcgtc@kfesnngalzgcnuff.com>
Message-ID: <01c3377f$eb25e790$0125250a@kfesnngalzgcnuff>
Source record: 29399

I just built a multi-element wire antenna that seems to be the best indoor antenna I've used so far. I tried a similar antenna for a while which is mounted in my water heater closet on the patio, but the coax and the necessary connectors were causing too much loss.

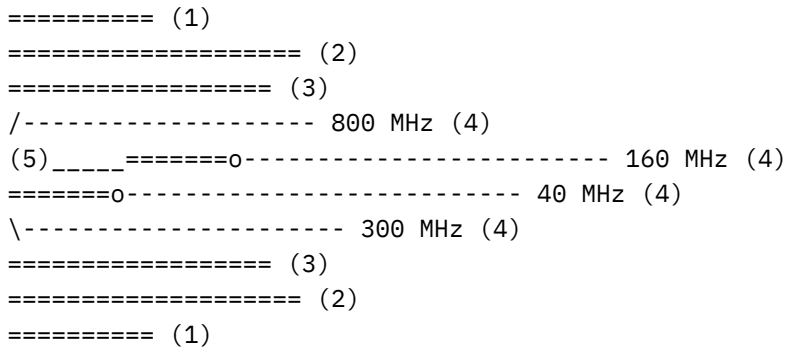
The antenna is constructed of four lengths of 24 gauge (I think -- from cat 4 cable) solid core copper insulated wire. Two of the wires are inserted and crimped into the pin of a crimp-on BNC connector and the other two wires are soldered to the first two. Insulation is wrapped around the four wires for about an inch starting at the end of the pin. Actually, I used a short piece of cat 4 network cable insulation. Cat 4 cable consists of four wires so the inside diameter is just right. The outside diameter is also just the right size to squeeze into the BNC connector. The purpose of this insulation is to help the four wires fit in the BNC connector tightly and to prevent chaffing of the thin wire insulation.

The pin, wires, and insulation material are then inserted into the BNC connector. I took a short piece of outer coax insulation and ran it over the BNC shaft then crimped on the collet.

My first attempt at this was with a solderless BNC connector, which has a screwpost for the center conductor, and four lengths of 22 gauge (I think) multi-strand speaker wire. This worked just as well but I wanted a second antenna and I had only one solderless connector and many crimp-on connectors.

I cut the four lengths of wire to suitable quarter wavelengths for 800 MHz, 300 MHz, 160 MHz, and 40 MHz and taped them together. Formula: inches=2808/MHz. I might replace the tape with small zip-ties. The BNC connectors are attached to two of my scanners and the end of the long wires are looped over tacks stuck in the ceiling.

A useless drawing:



1 = BNC ring
2 = BNC shaft

3 = insulation
4 = wires
5 = pin

Rising U.S. Death Toll In Iraq Spurs Concern

9 Soldiers Killed in Attacks This Month

By Peter Slevin
Washington Post Staff Writer

Friday, June 20, 2003; Page A16

Inside the Bush administration, where top officials resolutely emphasize postwar progress in Iraq while playing down the setbacks, the rising American death toll and the increasing number of attacks on U.S. troops are causing increasing worry.

The death of a U.S. soldier yesterday near Baghdad brought to nine the number of troops killed in Iraq this month in a string of sporadic rocket and sniper attacks.

Fifty-four Americans have died in accidents or military action since President Bush declared the war ended on May 1, equal to more than one-third of the 139 wartime deaths.

Bush and his top military and foreign policy officials define the casualties as a necessary cost of a successful military occupation.

They say the deaths, while painful, are secondary to recent progress on economic and security issues.

Saving Private Jessica

By NICHOLAS D. KRISTOF

NASIRIYA, Iraq

I've been roaming Iraq, turning over rocks in my unstinting effort to help the Bush administration find those weapons of mass destruction.

No luck yet.

But I did find something related, here in the city where it seems (contrary to early Pentagon leaks) that Pfc. Jessica Lynch did not mow down Iraqis until her ammo ran out, was not shot and apparently was not plucked from behind enemy lines by U.S. commandos braving a firefight.

It looks as if the first accounts of the rescue were embellished, like the imminent threat from W.M.D., and like wartime pronouncements about an uprising in Basra and imminent defections of generals.

There's a pattern: we were misled.

None of this is to put down Private Lynch, whom her Iraqi doctors described as courageous and funny in the face of unrelenting pain; they said that she told Abdul Hadi, a hospital worker who had befriended her, not to take risks for her because he was needed by his 17 children.

Ms. Lynch is still a hero in my book, and it was unnecessary for officials to try to turn her into a Hollywood caricature.

As a citizen, I deeply resent my government trying to spin me like a Ping-Pong ball.

Beyond the intelligence officials, aides to President Bush have begun to express less certainty about the question, saying they do not know whether he is dead or alive.

They include those aides who in the immediate aftermath of the war said Mr. Hussein was probably dead.

From The New York Times, 6/20/03:
http://www.nytimes.com/2003/06/20/international/worldspecial/20SADD.html

Hussein Is Probably Alive in Iraq, U.S. Experts Say

WASHINGTON --

American intelligence analysts now believe that Saddam Hussein is much more likely to be alive than dead, a view that has been strengthened in recent weeks by intercepted communications among fugitive members of the Saddam Fedayeen and the Iraqi intelligence service, according to United States government officials.

The officials said the recently obtained intelligence had re-intensified the search for Mr. Hussein along with his sons, Uday and Qusay.

2374. Oil is to die for!

From The Boston Globe, 6/18/03:
http://www.boston.com/dailyglobe2/169/oped/What_are_Americans_dying_for_now_+.shtml

What are Americans dying for now?

By Derrick Z. Jackson, 6/18/2003

OIL IS TO DIE for.

More to the point, oil is precious enough for the government to send off your children, your husbands, your wives, your partners, your brothers, and your sisters to die for.

That is a rapidly escalating conclusion as American soldiers continue to die at the rate of one a day in Iraq without any major perturbation in Congress or disturbance from the American people.

No weapons of mass destruction have been found.

What we do have are sniper shootings, grenade attacks, and the deaths of nearly 50 US soldiers 48 days after Bush said major combat operations were over in Iraq.

On May 1, Bush said, ''We've begun the search for hidden chemical and biological weapons and already know of hundreds of sites that will be investigated.''

Seven weeks later and with no vile vials in hand, Bush gave a speech Monday in Elizabeth, N.J., where he did not make a single reference to weapons of mass destruction.

Instead, Bush chose to distract Americans from his Nixonian erasing of his justification for war by criticizing his critics as ''revisionist historians.''

Meanwhile, Bush's fellow Republicans in Congress were suppressing history by fighting any formal investigation into the possible cooking of intelligence to exaggerate the threat posed by Saddam Hussein.

Their job, for the time being is being made a piece of cake by a Democratic Party that cannot spell the term ''opposition party'' if you spotted them all the o's and p's.

As the Republicans sit on the intelligence, as Democrats sit on their thumbs, and as Americans plan summer vacations depending on the cheapest gasoline for the biggest cars in the world, our soldiers -

many of them teenagers - are halfway around the world, taking bullets for a mission that is rapidly losing meaning - at least the stated meaning.

Oh, yes, a lot of angry e-mails attempt to remind us ''revisionist historians'' that the current absence of weapons of mass destruction really does not matter because the mass graves of Iraqis who were brutally murdered by Saddam proves the humanitarian aspect of the invasion was still worth it.

That does not hold up.

We went to Somalia a decade ago for what was supposed to be a humanitarian mission, after 300,000 people died in war and starvation.

We fled within months of a failed raid by Army Rangers that ended in the deaths of 18 soldiers and the searing photographs of the corpse of a US soldier being dragged through the streets of Mogadishu.

Back then, the call for the United States to get out of Somalia was stunningly bipartisan.

Since the White House was then occupied by a Democrat, Bill Clinton, it was no surprise that Republicans leaped on the sad turn of events, with Senator Pete Domenici of New Mexico saying, ''We can't continue in that quagmire.''

Then-congresswoman Olympia Snowe of Maine, now a senator, said, ''I cannot express my disgust at watching on television the treatment of our soldiers.... There really isn't a reason for the US to be in Somalia now.''

The criticism was just as blunt from many Democrats.

''If you asked all 535 members of Congress today, almost all of them would say let's get out of Somalia now,'' said Senator Joe Biden of Delaware.

''More and more senators are saying, `We gave them food, we gave them medicine, and now they're shooting at us. Let's get out,''' said Senator John Breaux of Louisiana.

Senator Bill Bradley of New Jersey said, ''I think we ought to leave now.''

Senator Robert Byrd of West Virginia said, ''Americans by the dozens are paying with their lives and limbs for a misplaced policy.... Let's vote and get out.''

When it came to Somalia, Dole asked:

''What is our purpose? What is the cost? And how long do we stay?'' A decade later, the same question should apply.

In the Iraq invasion we lost 139 soldiers, according to the Pentagon, while 3,240 Iraqi civilians had died as of the most recent counting by the Associated Press.

The AP said the final toll is sure to be much higher.

Now, nearly another 50 soldiers have died in nebulous situations that range from justifiable self-defense to dubious overreactions more reminiscent of the shootings of American students and rioters by National Guardsmen in the 1960s.

On May 1, Vice President Dick Cheney claimed that ''one of the most successful military campaigns ever waged'' displayed to the world ''a new American way of war.''

The new American way is already dissolving into a disgusting result that has grown old in the half-century after World War II - a quagmire.

It is about time to ask why we accept a quagmire for Iraq when we would not do it for Somalia.

Without the weapons of mass destruction, it has to be for the oil.

2375. U.S. Troops Frustrated With Role In Iraq!

U.S. Troops Frustrated With Role In Iraq

Soldiers Say They Are Ill-Equipped For Peacekeeping

By Daniel Williams and Rajiv Chandrasekaran
Washington Post Foreign Service

Friday, June 20, 2003; Page A01

BAGHDAD --

Facing daily assaults from a well-armed resistance, U.S. troops in volatile central Iraq say they are growing frustrated and disillusioned with their role as postwar peacekeepers.

In conversations in a half-dozen towns across central Iraq, soldiers complained that they have been insufficiently equipped for peacekeeping and too thinly deployed in areas where they are under attack from fighters evidently loyal to deposed president Saddam Hussein.

Others questioned whether the armed opposition to the U.S. presence in Iraq may be deeper and more organized than military commanders have acknowledged.

"What are we getting into here?" asked a sergeant with the U.S. Army's 4th Infantry Division who is stationed near Baqubah, a city 30 miles northeast of Baghdad.

"The war is supposed to be over, but every day we hear of another soldier getting killed. Is it worth it? Saddam isn't in power anymore. The locals want us to leave. Why are we still here?"

Today, a soldier from the 804th Medical Brigade was killed when a rocket-propelled grenade struck a military ambulance carrying a soldier wounded in another incident, said Capt. John Morgan, a

military spokesman here.

The attack, about 20 miles south of Baghdad, produced the third U.S. fatality from hostile fire in four days.

Two other soldiers were wounded in today's ambush.

Most armed assaults on U.S. military personnel have occurred in an arc of towns and cities to the north and west of Baghdad, where support for Hussein was deepest.

U.S. forces also have mounted a massive counterinsurgency drive in the region.

Areas south of the city, where no such counterattack has been launched, had been quiet until today.

The weapons used against the Americans also have been increasing in power.

In Samarra, a city about 70 miles north of Baghdad, U.S. troops killed an Iraqi today and captured another after they fired a rocket-propelled grenade at a tank.

On Wednesday, three mortar shells rained on a U.S.-run civil administration office in the city, killing an Iraqi bystander, military spokesmen said.

Some soldiers are vexed by what they see as a contradictory reception from Iraqis.

Sometimes the public appears welcoming, sometimes actively hostile.

The problem recalls other military U.S. deployments, including in Afghanistan, where it can be difficult to distinguish friends from enemies.

"The way it seemed is, once Iraqis got over being grateful for getting rid of Saddam, they found out quickly they don't want the Americans, either," said Sgt. Nestor Torres, a military policeman with the 3rd Infantry Division in the restive town of Fallujah, 35 miles west of Baghdad.

"Everyone is blending in with everyone else, so you can't tell the friendly ones from the hostile."

Torres is a bodyguard for the division commander, Maj. Gen. Buford C. Blount III.

"When I look around, I've got to wonder who wants to shoot my boss," Torres said.

Peacekeeping duty in Iraq has made soldiers particularly vulnerable. Troops at police stations and on guard duty at banks, electrical installations and fuel stations are frequent targets of sniping.

Soldiers have been fired on when delivering propane gas.

Bystanders throw stones at them when they are constructing soccer fields or fixing schools.

By contrast, no American has been killed during the recent armed raids in northern and western Iraq, during which U.S. troops have tried to apprehend suspected Baath Party militiamen, fighters from Saddam's Fedayeen and other Hussein loyalists.

Some soldiers complain they are playing roles for which they are ill-prepared.

In Baqubah, the domain of the 4th Infantry's 2nd Brigade, combat engineers who specialize in weapons demolition and building bridges have been given a new mission: to drive around in their M113 armored personnel carriers to fight crime.

"I don't know why they're keeping us around here," said Cpl. Anthony Arteaga, 25, of Hammond, La., who is assigned to the 588th Engineer Battalion.

"We're not peacekeepers. We're heavy-combat engineers."

As Arteaga's M113 roared out of a parking lot to conduct a patrol, the noise of the engine drowned out nearby conversations, prompting Pvt. Dan Sullivan, 21, of Gainesville, Fla., to complain that the vehicle was ill-suited for catching criminals.

"They hear you from two miles away," he said.

"By the time we get there, the bad guys are gone."

Sullivan also said that the armored vehicle was too wide to travel down some of Baqubah's narrower streets.

"This wasn't made for patrolling a city," he said.

But that is what the battalion has been doing for the past six weeks.

Assigned to squelch the lawlessness that followed the downfall of Hussein's government and confiscate illegal weapons, the unit's M113s rumble through the city for hours at a time, even under the blazing afternoon sun.

Soldiers decked out in full combat attire, including heavy flak jackets, poke out of the hatch, their M-16 rifles at the ready.

When the battalion first arrived in Baqubah in late April, "every single person was waving at us," said 2nd Lt. Skip Boston, 24, of Marshalltown, Iowa.

Now, he said, "they just stare."

"A man told me the other day that we've been here for two months and nothing's changed," Boston said.

"That's not really true, but all they see is us riding up and down the roads and being a nuisance for them."

The focus on crime fighting has annoyed Boston and his men, who said they would rather be blowing up ammunition caches.

"It's getting really frustrating," Sullivan said.

"We took the city, but what was it for? We took one bad guy out, but now there are lots of bad guys here."

After President Bush declared on May 1 that major combat in Iraq was finished, many soldiers assumed they would be returning to the United States in a matter of weeks.

But withdrawal plans have been placed on hold.

Not only have military units have been reassigned to street patrols, many are still living in the same spartan camps they pitched two months ago, where they eat rations and sleep in dusty tents.

The inability to unwind outside their camps or interact with Iraqis in a non-military setting has added to soldiers' frustration, several said.

Soldiers are prohibited from leaving their compounds without a weapon, body armor and a specific mission.

Although they are encouraged to talk to Iraqis while on patrol, they have been urged not to eat local food, and alcohol consumption is prohibited by a general order applying to all military personnel in Iraq.

At a checkpoint on the outskirts of Baghdad set up to search for illegal weapons, a soldier sweating in the 110-degree heat told a reporter, "Tell President Bush to bring us home."

On a skylight atop Fallujah's city hall, a soldier has scrawled in the dust:

"I'll kill for a ticket home."

Elements of Blount's 3rd Infantry Division have been away from their home base at Fort Stewart, Ga., since September, when they were deployed to Kuwait to prepare for the invasion.

After spearheading the race to Baghdad and the conquest of the capital, many in the division expected to be sent home.

Instead, they were dispatched to Fallujah to put down a budding revolt.

"Fatigue could come," Blount, the division commander, said in an interview.

"They are getting tired. But morale is still pretty good."

Others contend spirits already are slipping, particularly among reservists who did not anticipate staying in Iraq for more than a few months.

"It's a cliche, but winning the war is easy," said Master Sgt. Steven Quick, a reservist and police officer from Severn, Md.

"Winning the peace is difficult. For future recruitment and retaining of reservists, there has to be a clear idea of when we can go home in situations like this."

Even relatively simple projects designed to show goodwill can turn sour.

Military engineers recently cleared garbage from a field in Fallujah, resurfaced it with dirt and put up goal posts to create an instant soccer field.

A day later, the goal posts were stolen and all the dirt had been scraped from the field. Garbage began to pile up again.

"Is this animosity, crime or both? What kind of people loot dirt?" said Capt. Allen Vaught, from the 490th Civil Affairs Battalion.

"We can't build stuff and then have everyone just help themselves. We don't get anywhere that way."

2376. Lying and Dying. Sex, Lies & WMDs.

Lying and Dying

Sex, Lies & WMDs

By Dr. SUSAN BLOCK

Perma-war pops as the dollar drops.

Our leaders lie as people die.

Of course, there are lies, and then there are lies.

Four years ago, a President of the United States was impeached because he lied about details of his sex life.

His enemies insisted:

It's not the sex that's the impeachable offense-- although they couldn't stop talking about the sex--it's the lying!

Though nobody died for those lies.

Now the mob that practically lynched President Clinton is running the country, with the major media as their handmaiden.

And their President who would be King, George II, has been caught in a lie so big, Joseph Goebbels must be tipping his peaked cap in admiration from his grave.

Little Dubya told a lie, not about sex (unless he really does strap on a missile slathered with Crisco between his legs before mounting one of his beloved ranch animals).

No, the Great Pretzel Swallower didn't lie about sex, but about the basis for war.

So far, this particular war has killed untold thousands of soldiers and civilians, including hundreds of Americans, as well as more than a few British blokes, cost us billions of dollars in the midst of the worst deficit in U.S. history, gotten our leaders charged with war crimes by a Belgian court, served as an Al Qaeda recruiting symbol beyond Osama's wildest dreams, and shows no signs of being over, despite Top Gun Georgy's costume-drama proclamation of the end of major fighting on board the U.S.S. Lincoln.

Moreover, Gulf War II is but one part of the Perma-War condition into which the lies of the Bushites have submerged America.

So, which lie should be an impeachable offense?

A personal fib to cover-up a blow-job, or an elaborately orchestrated web of deceit, forgery and Big Internationally Broadcast Whoppers about Vast Stores of End-Times Armaments, for the clear purpose of terrorizing Americans into supporting war, even when all the evidence showed us that Saddam, Evil-Doer that he was, hadn't developed any major weapons since the Gulf War I.

So what if Saddam acted like he had something to hide?

A lot of men do.

Like I explained, almost a year ago in these pages, "Saddamis the kind of guy who brags he's got nine inches, then won't let you unzip his pants for fear you'll laugh at his actual four and a half (and he'd have to kill you for that)."

So, now we all know Saddam is just that type of guy, and we can all see clear-as-a-day-without-bombs that our President and his henchmen lied to us.

So which lie is worse-Clinton's or Bush's?

The sexual sin or the war crime?

The blow-job cover-up or the ruse for the rape of Iraq?

Obviously, covering up a blow-job is worse, according to Congress (also according to the TV pundits who are still after the Clintons, as evidenced by their enraged reaction to the blockbuster sales of Hillary's memoir "Living History").

And oh, those awful semen stains!

Much, much worse than the bloodstains across the ancient land of Mesopotamia, laid waste upon a Pack of Lies.

Hey now, there's a pack of playing cards I'd like to see!

Each card could have a different WMD that the Bushites lied about.

The Ace of Hearts could be the 500 tons of sarin, mustard gas and VX nerve agent.

The Queen of Diamonds could be the 25,000 liters of anthrax.

The Jack of Clubs would be the 38,000 liters of botulinum toxin.

The King of Spades would be the 500 tons of "yellowcake" uranium from Niger.

And so on.

According to Dubya's State of the Union Address, Saddam had enough weapons to blow us to the moon within 45 minutes.

A lie like this shouldn't even be protected by the First Amendment; it is the national equivalent of yelling "Fire!" in a crowded theater.

Sure, many of us knew the Shrub was full of it.

But some of us believed him (just like some of us believed that Billy Jeff "never had sexual relations with that woman"), and on the basis of that belief, we heaved ourselves and our loved ones into this major war that is just beginning, even as the scope of the lie comes clear.

For months, our troops have been bravely searching for these tons upon tons of horrible stuff from FrankenSaddam's evil laboratory (and the search, along with the war, continues), and all to no avail.

They can't even find enough poison in those two Winnebagos to kill a rat.

At this point, if anyone comes up with anything (a vat of lye? a really big can of Raid?), everyone will wonder if it's a plant.

So, caught in a lie, what does our leader do?

Remember what Clinton did?

He came clean--cleaner than any other American president has had to come about his sex life.

He was a man, a sexual man, and he apologized for his indiscretion and took his punishment, insanely overblown as it was.

And what does Bush do?

He blames the CIA.

Of course, Clinton couldn't blame the CIA.

Ever since the Puritans invaded this land, Americans have been sticklers for making us all "take responsibility" for sex.

Too bad we aren't so hypercritical of our leaders when it comes to war.

2377. Iraqis Were Set to Vote, but U.S. Wielded a Veto

Iraqis Were Set to Vote, but U.S. Wielded a Veto

By DAVID ROHDE

AJAF, Iraq --

American marines had built makeshift wooden ballot boxes.

An Army reserve unit from Green Bay, Wis., had conducted a voter registration drive.

And Iraqi political candidates had blanketed the city with colorful fliers outlining their election platforms -- restore electricity, rehabilitate the old quarter, repave roads.

But last week, L. Paul Bremer III, the head of the American military occupation in Iraq, unilaterally canceled what American officials here said would have been the first such election in Iraq since the fall of Saddam Hussein.

Overruling the local American military commander, Mr. Bremer decreed that conditions in Najaf were not appropriate for an election.

2378. No work, no money and plenty of desperation: Just another day in Baghdad.

Just another day in Baghdad

The demonstrating Iraqis have no work, no money and are desperate.

Two are shot dead.

Nearby, an American soldier guarding a gas station is casually killed

Rory McCarthy in Baghdad
Thursday June 19, 2003
The Guardian

Hussein Saber shook with fury as he lay on a dirty hospital bed last night and told the story of another day in Baghdad, a city torn apart by killings, misunderstanding and the startling failures of America's military occupation.

Yesterday Hussein, 33, should have collected a $50 emergency payment which all Iraq's now unemployed soldiers are due to receive.

The money did not arrive and so he and hundreds of other frustrated young men poured towards the gates of the US-led authority to protest.

Within minutes he was shot in his right side by a young, nervous American soldier.

Hussein survived but two other Iraqis standing next to him in the crowd were killed.

Just a few miles away in the centre of the city, gunmen in a passing car shot dead one American soldier and wounded another as they guarded a propane gas station.

It was another strike against the US military by an increasingly bold guerrilla resistance force intent on destabilising the reconstruction.

Neither the Iraqis nor the Americans ever dreamed that Baghdad would be like this, ten weeks to the day after Saddam Hussein's regime was finally toppled.

The people of this city are still gripped with the deepening problems of poor security, interminable power shortages and unpaid salaries.

Their frustration is spilling over into a spate of attacks on the US military, which are met with heavy-handed raids and mass arrests

which, in turn, spark yet greater frustration.

Searing midsummer temperatures do little to cool tempers on either side.

"I hoped and I wished that when the American forces came they would bring us democracy and freedom but unfortunately we have seen the opposite," said Hussein, a non-commissioned officer in the air force for the past 18 years.

"The Americans are going to get hurt if the situation remains as it is."

All the junior ranks within Iraq's 400,000-strong military, which was formally dissolved last month, have been promised a one-off payment and the chance to apply for a job in the new Iraqi national army.

In reality none have been paid since their last wages from the regime in February or March.

Recruitment for the new military has not started and, like the thousands of regular government employees still without work, their frustration should be evident for the US authority to see.

Hundreds of former soldiers gathered at the national recruitment office in Baghdad yesterday morning where they expected to receive their payouts.

Similar payments have been made by the British army in Basra.

But yesterday when officials in the building told them they had no money to offer they poured towards the gates of the Republican Palace, once Saddam's home and now the base of the US-led authority.

In the eyes of the US military, the crowd of frustrated former soldiers was a threat and they eventually opened fire.

The Iraqi soldiers see themselves very differently - as husbands and fathers, struggling to make a living, gripped with defeated pride and disappointment.

Khadum Hussain Hani, 32, joined the Iraqi military aged 15 for the same reasons that brought many of the young Americans on patrol in Baghdad into the US army - he wanted to serve his country and he wanted a decent wage.

His brother, also a soldier, died during the war with Iran in the 1980s.

Following tradition, Khadum married his brother's wife and took responsibility for the couple's three young children.

Last year they had another son.

Until the war he was paid 75,000 dinars a month (then worth $37).

Since March he has received nothing and has had to borrow thousands of dollars to pay the 30,000 dinars monthly rent on his small apartment.

"I have borrowed and borrowed and all I have left in my pocket today is my identity card," he said yesterday.

Before the war he and his wife talked about whether he would fight.

"I told her I wouldn't fight. I was glad the Americans were coming to take us away from this oppression," he said.

Now he has to explain to his children why he has no work and no money.

"Sometimes they ask: 'Did you bring home any apples today father?'" he said.

"I tell them I will bring apples one day when I have some money."

It is all too clear that the natural goodwill that many Iraqis felt when the US and British forces brought to an end three decades of brutality and repression is rapidly fading.

"There is a big gap between the Iraqis and the Americans right now," said Khadum.

American troops speak freely of their own frustrations.

They patrol in heavy bulletproof jackets and Kevlar helmets in the suffocating midday heat.

Many were first deployed to camps in Kuwait nine months ago and have had little time to rest or recover from the intense three weeks of combat that brought them to Baghdad.

The shift from fighting to peacekeeping has been fractured and slow.

Still they are being targeted in guerrilla attacks and they don't understand why.

The al-Shawaf crossroads outside the Republican Palace, the bloodied site of yesterday's killings, has become the touchstone of the failings of the military occupation.

Here there are queues of the articulate and the plain angry.

The US officials who should be listening to their very simple and very real complaints are locked in a cycle of meetings from dawn until after midnight in the palace complex, behind the heavily guarded, barbed-wire entrance at the palace gates.

Alia Abbas Issa, 42, used to work in the palace as a seamstress, sewing curtains for Saddam's offices and private rooms.

She took the job to help pay for English lessons at the local British Council office.

It paid her well, up to 200,000 dinars (ï¿½2000) a month.

Then came the war.

Her apartment was looted of all her possessions, even her bed, and her job disappeared.

She is left caring for the two daughters of her younger brother, who died in Kuwait during the first Gulf war.

"There is nothing I can tell them. We used to have money now there is nothing. We cry from night until morning," she said.

"I thought the Americans would bring us a new start. We want to like George Bush but the Iraqis are suffering and suffering," she said.

"God will reward those people who come here if they come here to help us."

June 19, 2003
U.S. Trade Deficit Swells to Record $136.1 Billion
By THE ASSOCIATED PRESS

Filed at 5:16 p.m. ET

NEW YORK (AP) -- A key measure of future economic activity rose sharply in May, beating analysts' expectations and fueling hopes for a rebound. But don't pop the champagne corks yet; economists say a few more months of positive readings are needed to inspire the business confidence needed for a full recovery.

The Index of Leading Economic Indicators rose 1.0 percent in May to 111.6, the New York-based Conference Board said. Analysts had expected a rise of about 0.6 percent.

The forecast followed encouraging news from the Labor Department that unemployment benefit claims are on the decline. And in welcome news for the housing market, a new survey showed rates on 30-year mortgages remained at record low levels this week.

Though the index of leading indicators was slightly higher than anticipated, economists said the figure largely confirmed expectations. Investors remained cautious, sending stocks tumbling as they sought to preserve profits from previous rallies.

The Dow Jones industrial average closed down 114 points at 9,180. The broader market also retreated. The Nasdaq composite index fell 29 points to close at 1,649. The Standard & Poor's 500 index dropped 15 points to close at 995.

David Wyss, chief economist at Standard & Poor's in New York, said the rise in the Conference Board index is the clearest sign that things are looking up.

``Everything is pointed in the same direction, but except for the leading indicator, none of it is pointing too hard,'' said Wyss. ``I think that's sort of the state of the economy right now. We may be turning the corner, but we're taking it awfully wide.''

The Conference Board index measures where the overall U.S. economy is headed in the next three to six months. It stood at 100 in 1996, its base year.

The sharp increase in May, following a slight increase in April, comes after 18 months of essentially sideways movement. The consecutive increases could

reflect the beginning of an upward trend.

``The Leading Economic Index finally points to a recovery,'' said Conference Board economist Ken Goldstein. ``But the dangers present in the first five months of the year have not disappeared completely. Chief among them is a lack of business confidence.''

Eight of the 10 indicators that make up the leading index rose in May. Among the positive contributors were stock prices, real money supply and consumer expectations. The Conference Board's coincident index, which measures current economic activity, rose 0.1 percent in May, after holding steady in April and March.

Patrick Fearon, an economist with A.G. Edwards & Sons in St. Louis, said it was encouraging that the rise was so broad, but he remains concerned about lagging business spending and consumer sentiment.

``We'd like to see a few more months of positive readings before we can say that the economy is accelerating in a sustained way,'' Fearon said. ``It's a little early to break out the champagne.''

Meanwhile, the Labor Department said Thursday that new claims for unemployment benefits dropped for the second straight week, declining by a seasonally adjusted 13,000 to 421,000, a five-week low. The more stable, four-week moving average of claims, which smooths out weekly fluctuations, also declined by 3,000 to 432,000.

The employment market continues to worry economists. Although claims have fallen, they're still above 400,000 -- a level associated with a weak job market. But the declines have raised hope that the pace of layoffs may be stabilizing.

Separately, mortgage giant Freddie Mac said the average rate on 30-year fixed-rate mortgages for the week ending June 20 held steady at 5.21 percent, unchanged from last week, according to its nationwide survey.

Last week's rate was the lowest since Freddie Mac began tracking 30-year mortgages in 1971.

Low mortgage rates help the housing market and feed a home-mortgage refinancing boom, which in turn frees money that consumers can spend on other things.

Also Thursday, the Commerce Department said the deficit in the broadest measure of trade widened to a record $136.1 billion in the first three months of 2003, as war tensions stoked the prices of imported crude oil and other petroleum products. The snapshot shows the ``current account'' deficit in the January-March quarter was 5.8 percent larger than the previous record deficit of $128.6 billion, set in the fourth quarter of 2002.

Bush's 9/11 coverup?
Family members of victims of the terror attacks say the White House has smothered every attempt to get to the bottom of the outrageous intelligence failures that took place on its watch.

- - - - - - - - - - - -
By Eric Boehlert

June 18, 2003 | For family members of those who died on Sept. 11, last week brought a rare chance to meet face-to-face with a man who's become a symbol of their dissatisfaction -- FBI director Robert Mueller. The bureau had quietly invited several dozen family members to Washington to hear a presentation on the war on terrorism, but for the small band of husbands, wives and parents who successfully lobbied Congress last year for an independent 9/11 commission to investigate the attacks, it was a chance to ask some of the troubling questions that they have about that day.

They weren't simply queries about the national security collapse that occurred on 9/11, and how a hijacked plane, flying hundreds of miles off course, was able to dive-bomb untouched into the Pentagon a full hour after the World Trade Center had already been attacked twice. Or how more than a dozen terrorists were able to enter America illegally and then live here undetected for weeks and months, and why U.S. intelligence sources failed to piece together significant clues that emerged in advance of the attack.

Family advocates also wanted to know why the government -- and specifically the Bush administration -- has been so reluctant to find answers to any of the obvious questions about what went wrong that day, why so little has been fixed, and why virtually nobody has accepted any responsibility for the glaring failures.

While the administration of President George W. Bush is aggressively positioning itself as the world leader in the war on terrorism, some families of the Sept. 11 victims say that the facts increasingly contradict that script. The White House long opposed the formation of a blue ribbon Sept. 11 commission, some say, and even now that panel is underfunded and struggling to build momentum. And, they say, the administration is suppressing a 900-page congressional study, possibly out of fear that the findings will be politically damaging to Bush.

2381. Bush Lied to Americans on the War

html

Kerry says Bush misled Americans on war
By Ron Fournier, Associated Press, 6/18/2003 21:04

LEBANON, N.H. (AP) Democratic presidential candidate John Kerry said Wednesday that President Bush broke his promise to build an international coalition against Iraq's Saddam Hussein and then waged a war based on questionable intelligence.

''He misled every one of us,'' Kerry said. ''That's one reason why I'm running to be president of the United States.''

Kerry said Bush made his case for war based on at least two pieces of U.S. intelligence that now appear to be wrong that Iraq sought nuclear material from Africa and that Saddam's regime had aerial weapons capable of attacking the United States with biological material.

Still, Kerry said it is too early to conclude whether or not war with Iraq was justified. There needs to be a congressional investigation into U.S. intelligence on Iraq, he said.

''I will not let him off the hook throughout this campaign with respect to America's credibility and credibility to me because if he lied he lied to me personally,'' he said.

Kerry fielded several questions about Iraq from a small group of anti-war Democrats after he addressed about 250 people in a downtown Lebanon park.

Kerry supported the war and said Wednesday, ''I'm glad Saddam Hussein is gone.'' But the Massachusetts senator has criticized the president's diplomatic efforts. He that concern Wednesday saying Bush had alienated U.S. allies in the runup to war.

As for the question about U.S. intelligence, Kerry said he has led the call for a congressional investigation and pledged, ''We will get to the bottom of this.''

Kerry said his service in the Vietnam war and his experience as a member of the Foreign Relations Committee and former member of the Intelligence Committee of the Senate make him the Democrat best suited to question Bush's efforts on foreign policy.

''I believe I can hold President Bush accountable if they have misled us,'' he said.

Addressing senior citizens in Hanover later in the evening, Kerry said he supported a congressional investigation because it was not clear whether Bush acted on poor, distorted or politicized intelligence.

''I don't have the answer,'' he said. ''I want the answer and the American people deserve the answer. I will get to the bottom of this.''

2382. Iraqis Curse B.U.S.H. at Funeral of Protestor

Iraqi gunmen curse America at protester's funeral

By Esmat Salaheddin

BAGHDAD, June 19 (Reuters) - Cursing America, scores of gunmen fired in the air on Thursday at the funeral of a former Iraqi air force man killed by U.S. troops during a violent protest in Baghdad.

"Revenge! Revenge!" several hundred mourners shouted as men with Kalashnikov assault rifles fired volleys into the air, in defiance of a U.S. ban on carrying weapons in Iraq.

"There is no god but Allah, America is the enemy of Allah," mourners chanted as they followed the coffin of Tareq Mohammed, one of two men shot dead at a demonstration on Wednesday.

There was no sign of U.S. troops in Baghdad's impoverished al-Hurriya district where Mohammed, a former air force non-commissioned officer, had lived with his wife and five children.

Mohammed was killed when sacked members of Iraq's dissolved armed forces confronted U.S. soldiers during furious protests outside the headquarters of the U.S.-led administration in the capital.

The U.S. military said demonstrators had thrown stones at a convoy entering the compound and one had pulled out a weapon and begun shooting, prompting U.S. forces to respond.

Mohammed's former colleagues who joined him in Wednesday's protest denied the accusations, saying they were unarmed.

"We were unarmed in a peaceful demonstration to demand our frozen salaries," said one mourner, Khazaal Qatie, angrily. "Isn't that terrorism, shooting at protesters?"

During the demonstration, protesters beat passing United Nations and press vehicles with shoes, and attacked some journalists, smashing their cameras.

"They deprived us of our jobs and have not offered us new ones," Qatie said of the U.S. move to disband Saddam Hussein's armed forces, security services and two ministries, throwing 400,000 people out of work.

"The Americans should expect problems now. He (Mohammed) has relatives, friends and neighbours."

People who gathered for funeral prayers at the neighbourhood mosque complained bitterly about the lack of electricity, water and other services in the area.

"The former regime was 1,000 times more merciful," said one resident, Abdul-Azim Abdul-Wahed.

"The Americans have only pumps to steal our oil, but have no generators for us."

U.S. forces have struggled to impose order and restore services in Iraq since Saddam's government fell on April 9.

I just completed my Aerial Refueling information website page. Iï¿½ve included AR tracks from AR-1 through AR-662V. Also included are maps depicting the AR tracks/areas. For those with poor eyesight Iï¿½ve included a map image as large as 2851x2101 pixels! Full notes on each AR track are also included.

For those who like to store frequencies in your own spreadsheets, databases, or scanner programming software I have included downloadable Excel and CSV (comma separated value) files. With these you should be able to easily program your scanner with this wealth of Aerial Refueling Information.

You can access the Aerial Refueling information directly at http://www.milaircomms.com/refuel_tracks.html

Enjoy,
George

So what do you expect people to say about a fire? They happen all the time. Or about a glider crashing? Or about a derailment?

You're posting regional incidents that affect no one. What happens in the World affects everyone and people naturally have pro or con opinions on those events.

Rising U.S. Death Toll In Iraq Spurs Concern

9 Soldiers Killed in Attacks This Month

By Peter Slevin
Washington Post Staff Writer

Friday, June 20, 2003; Page A16

Inside the Bush administration, where top officials resolutely
emphasize postwar progress in Iraq while playing down the setbacks,
the rising American death toll and the increasing number of attacks on
U.S. troops are causing increasing worry.

The death of a U.S. soldier yesterday near Baghdad brought to nine the
number of troops killed in Iraq this month in a string of sporadic
rocket and sniper attacks.

Fifty-four Americans have died in accidents or military action since
President Bush declared the war ended on May 1, equal to more than
one-third of the 139 wartime deaths.

Bush and his top military and foreign policy officials define the
casualties as a necessary cost of a successful military occupation.

They say the deaths, while painful, are secondary to recent progress
on economic and security issues.

Saving Private Jessica

By NICHOLAS D. KRISTOF

NASIRIYA, Iraq

I've been roaming Iraq, turning over rocks in my unstinting effort to help the Bush administration find those weapons of mass destruction.

No luck yet.

But I did find something related, here in the city where it seems (contrary to early Pentagon leaks) that Pfc. Jessica Lynch did not mow down Iraqis until her ammo ran out, was not shot and apparently was not plucked from behind enemy lines by U.S. commandos braving a firefight.

It looks as if the first accounts of the rescue were embellished, like the imminent threat from W.M.D., and like wartime pronouncements about an uprising in Basra and imminent defections of generals.

There's a pattern: we were misled.

None of this is to put down Private Lynch, whom her Iraqi doctors described as courageous and funny in the face of unrelenting pain; they said that she told Abdul Hadi, a hospital worker who had befriended her, not to take risks for her because he was needed by his 17 children.

Ms. Lynch is still a hero in my book, and it was unnecessary for officials to try to turn her into a Hollywood caricature.

As a citizen, I deeply resent my government trying to spin me like a Ping-Pong ball.

What A HOOT! Cut and Paste. Cut and Paste. Cut and Paste. Cut and Paste.
No brains strikes again! If its in the Post it must be true! Cut and Paste.

Beyond the intelligence officials, aides to President Bush have begun
to express less certainty about the question, saying they do not know
whether he is dead or alive.

They include those aides who in the immediate aftermath of the war
said Mr. Hussein was probably dead.

From The New York Times, 6/20/03:
http://www.nytimes.com/2003/06/20/international/worldspecial/20SADD.html

Hussein Is Probably Alive in Iraq, U.S. Experts Say

By DOUGLAS JEHL and DAVID JOHNSTON

WASHINGTON --

American intelligence analysts now believe that Saddam Hussein is much
more likely to be alive than dead, a view that has been strengthened
in recent weeks by intercepted communications among fugitive members
of the Saddam Fedayeen and the Iraqi intelligence service, according
to United States government officials.

The officials said the recently obtained intelligence had
re-intensified the search for Mr. Hussein along with his sons, Uday
and Qusay.

From The Boston Globe, 6/18/03:
http://www.boston.com/dailyglobe2/169/oped/What_are_Americans_dying_for_now_
+.shtml

What are Americans dying for now?

By Derrick Z. Jackson, 6/18/2003

OIL IS TO DIE for.

More to the point, oil is precious enough for the government to send off your children, your husbands, your wives, your partners, your brothers, and your sisters to die for.

That is a rapidly escalating conclusion as American soldiers continue to die at the rate of one a day in Iraq without any major perturbation in Congress or disturbance from the American people.

No weapons of mass destruction have been found.

What we do have are sniper shootings, grenade attacks, and the deaths of nearly 50 US soldiers 48 days after Bush said major combat operations were over in Iraq.

On May 1, Bush said, ''We've begun the search for hidden chemical and biological weapons and already know of hundreds of sites that will be investigated.''

Seven weeks later and with no vile vials in hand, Bush gave a speech Monday in Elizabeth, N.J., where he did not make a single reference to weapons of mass destruction.

Instead, Bush chose to distract Americans from his Nixonian erasing of his justification for war by criticizing his critics as ''revisionist historians.''

Meanwhile, Bush's fellow Republicans in Congress were suppressing history by fighting any formal investigation into the possible cooking of intelligence to exaggerate the threat posed by Saddam Hussein.

Their job, for the time being is being made a piece of cake by a Democratic Party that cannot spell the term ''opposition party'' if you spotted them all the o's and p's.

As the Republicans sit on the intelligence, as Democrats sit on their thumbs, and as Americans plan summer vacations depending on the cheapest gasoline for the biggest cars in the world, our soldiers - many of them teenagers - are halfway around the world, taking bullets for a mission that is rapidly losing meaning - at least the stated meaning.

Oh, yes, a lot of angry e-mails attempt to remind us ''revisionist historians'' that the current absence of weapons of mass destruction really does not matter because the mass graves of Iraqis who were brutally murdered by Saddam proves the humanitarian aspect of the invasion was still worth it.

That does not hold up.

We went to Somalia a decade ago for what was supposed to be a humanitarian mission, after 300,000 people died in war and starvation.

We fled within months of a failed raid by Army Rangers that ended in the deaths of 18 soldiers and the searing photographs of the corpse of a US soldier being dragged through the streets of Mogadishu.

Back then, the call for the United States to get out of Somalia was stunningly bipartisan.

Since the White House was then occupied by a Democrat, Bill Clinton, it was no surprise that Republicans leaped on the sad turn of events, with Senator Pete Domenici of New Mexico saying, ''We can't continue in that quagmire.''

Then-congresswoman Olympia Snowe of Maine, now a senator, said, ''I cannot express my disgust at watching on television the treatment of our soldiers.... There really isn't a reason for the US to be in Somalia now.''

The criticism was just as blunt from many Democrats.

''If you asked all 535 members of Congress today, almost all of them would say let's get out of Somalia now,'' said Senator Joe Biden of Delaware.

''More and more senators are saying, `We gave them food, we gave them medicine, and now they're shooting at us. Let's get out,''' said Senator John Breaux of Louisiana.

Senator Bill Bradley of New Jersey said, ''I think we ought to leave now.''

Senator Robert Byrd of West Virginia said, ''Americans by the dozens are paying with their lives and limbs for a misplaced policy.... Let's vote and get out.''

When it came to Somalia, Dole asked:

''What is our purpose? What is the cost? And how long do we stay?'' A decade later, the same question should apply.

In the Iraq invasion we lost 139 soldiers, according to the Pentagon, while 3,240 Iraqi civilians had died as of the most recent counting by the Associated Press.

The AP said the final toll is sure to be much higher.

Now, nearly another 50 soldiers have died in nebulous situations that range from justifiable self-defense to dubious overreactions more reminiscent of the shootings of American students and rioters by National Guardsmen in the 1960s.

On May 1, Vice President Dick Cheney claimed that ''one of the most successful military campaigns ever waged'' displayed to the world ''a new American way of war.''

The new American way is already dissolving into a disgusting result that has grown old in the half-century after World War II - a quagmire.

It is about time to ask why we accept a quagmire for Iraq when we would not do it for Somalia.

Without the weapons of mass destruction, it has to be for the oil.

What A HOOT! Cut and Paste. Cut and Paste. Cut and Paste. Cut and Paste.
No brains strikes again! If its in the Post it must be true! Cut and Paste.

U.S. Troops Frustrated With Role In Iraq

Soldiers Say They Are Ill-Equipped For Peacekeeping

By Daniel Williams and Rajiv Chandrasekaran
Washington Post Foreign Service

Friday, June 20, 2003; Page A01

BAGHDAD --

Facing daily assaults from a well-armed resistance, U.S. troops in
volatile central Iraq say they are growing frustrated and
disillusioned with their role as postwar peacekeepers.

In conversations in a half-dozen towns across central Iraq, soldiers
complained that they have been insufficiently equipped for
peacekeeping and too thinly deployed in areas where they are under
attack from fighters evidently loyal to deposed president Saddam
Hussein.

Others questioned whether the armed opposition to the U.S. presence in
Iraq may be deeper and more organized than military commanders have
acknowledged.

"What are we getting into here?" asked a sergeant with the U.S. Army's
4th Infantry Division who is stationed near Baqubah, a city 30 miles
northeast of Baghdad.

"The war is supposed to be over, but every day we hear of another
soldier getting killed. Is it worth it? Saddam isn't in power anymore.
The locals want us to leave. Why are we still here?"

Today, a soldier from the 804th Medical Brigade was killed when a rocket-propelled grenade struck a military ambulance carrying a soldier wounded in another incident, said Capt. John Morgan, a military spokesman here.

The attack, about 20 miles south of Baghdad, produced the third U.S. fatality from hostile fire in four days.

Two other soldiers were wounded in today's ambush.

Most armed assaults on U.S. military personnel have occurred in an arc of towns and cities to the north and west of Baghdad, where support for Hussein was deepest.

U.S. forces also have mounted a massive counterinsurgency drive in the region.

Areas south of the city, where no such counterattack has been launched, had been quiet until today.

The weapons used against the Americans also have been increasing in power.

In Samarra, a city about 70 miles north of Baghdad, U.S. troops killed an Iraqi today and captured another after they fired a rocket-propelled grenade at a tank.

On Wednesday, three mortar shells rained on a U.S.-run civil administration office in the city, killing an Iraqi bystander, military spokesmen said.

Some soldiers are vexed by what they see as a contradictory reception from Iraqis.

Sometimes the public appears welcoming, sometimes actively hostile.

The problem recalls other military U.S. deployments, including in Afghanistan, where it can be difficult to distinguish friends from enemies.

"The way it seemed is, once Iraqis got over being grateful for getting rid of Saddam, they found out quickly they don't want the Americans, either," said Sgt. Nestor Torres, a military policeman with the 3rd Infantry Division in the restive town of Fallujah, 35 miles west of Baghdad.

"Everyone is blending in with everyone else, so you can't tell the friendly ones from the hostile."

Torres is a bodyguard for the division commander, Maj. Gen. Buford C. Blount III.

"When I look around, I've got to wonder who wants to shoot my boss," Torres said.

Peacekeeping duty in Iraq has made soldiers particularly vulnerable. Troops at police stations and on guard duty at banks, electrical installations and fuel stations are frequent targets of sniping.

Soldiers have been fired on when delivering propane gas.

Bystanders throw stones at them when they are constructing soccer fields or fixing schools.

By contrast, no American has been killed during the recent armed raids in northern and western Iraq, during which U.S. troops have tried to apprehend suspected Baath Party militiamen, fighters from Saddam's Fedayeen and other Hussein loyalists.

Some soldiers complain they are playing roles for which they are ill-prepared.

In Baqubah, the domain of the 4th Infantry's 2nd Brigade, combat engineers who specialize in weapons demolition and building bridges have been given a new mission: to drive around in their M113 armored personnel carriers to fight crime.

"I don't know why they're keeping us around here," said Cpl. Anthony Arteaga, 25, of Hammond, La., who is assigned to the 588th Engineer Battalion.

"We're not peacekeepers. We're heavy-combat engineers."

As Arteaga's M113 roared out of a parking lot to conduct a patrol, the noise of the engine drowned out nearby conversations, prompting Pvt. Dan Sullivan, 21, of Gainesville, Fla., to complain that the vehicle was ill-suited for catching criminals.

"They hear you from two miles away," he said.

"By the time we get there, the bad guys are gone."

Sullivan also said that the armored vehicle was too wide to travel down some of Baqubah's narrower streets.

"This wasn't made for patrolling a city," he said.

But that is what the battalion has been doing for the past six weeks.

Assigned to squelch the lawlessness that followed the downfall of Hussein's government and confiscate illegal weapons, the unit's M113s rumble through the city for hours at a time, even under the blazing afternoon sun.

Soldiers decked out in full combat attire, including heavy flak jackets, poke out of the hatch, their M-16 rifles at the ready.

When the battalion first arrived in Baqubah in late April, "every single person was waving at us," said 2nd Lt. Skip Boston, 24, of Marshalltown, Iowa.

Now, he said, "they just stare."

"A man told me the other day that we've been here for two months and nothing's changed," Boston said.

"That's not really true, but all they see is us riding up and down the roads and being a nuisance for them."

The focus on crime fighting has annoyed Boston and his men, who said they would rather be blowing up ammunition caches.

"It's getting really frustrating," Sullivan said.

"We took the city, but what was it for? We took one bad guy out, but now there are lots of bad guys here."

After President Bush declared on May 1 that major combat in Iraq was finished, many soldiers assumed they would be returning to the United States in a matter of weeks.

But withdrawal plans have been placed on hold.

Not only have military units have been reassigned to street patrols, many are still living in the same spartan camps they pitched two months ago, where they eat rations and sleep in dusty tents.

The inability to unwind outside their camps or interact with Iraqis in a non-military setting has added to soldiers' frustration, several said.

Soldiers are prohibited from leaving their compounds without a weapon, body armor and a specific mission.

Although they are encouraged to talk to Iraqis while on patrol, they have been urged not to eat local food, and alcohol consumption is prohibited by a general order applying to all military personnel in Iraq.

At a checkpoint on the outskirts of Baghdad set up to search for illegal weapons, a soldier sweating in the 110-degree heat told a reporter, "Tell President Bush to bring us home."

On a skylight atop Fallujah's city hall, a soldier has scrawled in the dust:

"I'll kill for a ticket home."

Elements of Blount's 3rd Infantry Division have been away from their home base at Fort Stewart, Ga., since September, when they were deployed to Kuwait to prepare for the invasion.

After spearheading the race to Baghdad and the conquest of the capital, many in the division expected to be sent home.

Instead, they were dispatched to Fallujah to put down a budding revolt.

"Fatigue could come," Blount, the division commander, said in an interview.

"They are getting tired. But morale is still pretty good."

Others contend spirits already are slipping, particularly among reservists who did not anticipate staying in Iraq for more than a few months.

"It's a cliche, but winning the war is easy," said Master Sgt. Steven Quick, a reservist and police officer from Severn, Md.

"Winning the peace is difficult. For future recruitment and retaining of reservists, there has to be a clear idea of when we can go home in situations like this."

Even relatively simple projects designed to show goodwill can turn sour.

Military engineers recently cleared garbage from a field in Fallujah, resurfaced it with dirt and put up goal posts to create an instant soccer field.

A day later, the goal posts were stolen and all the dirt had been scraped from the field. Garbage began to pile up again.

"Is this animosity, crime or both? What kind of people loot dirt?" said Capt. Allen Vaught, from the 490th Civil Affairs Battalion.

"We can't build stuff and then have everyone just help themselves. We don't get anywhere that way."

What A HOOT! Cut and Paste. Cut and Paste. Cut and Paste. Cut and Paste. No brains strikes again! If its in the Post it must be true! Cut and Paste.

Lying and Dying

Sex, Lies & WMDs

By Dr. SUSAN BLOCK

Perma-war pops as the dollar drops.

Our leaders lie as people die.

Of course, there are lies, and then there are lies.

Four years ago, a President of the United States was impeached because he lied about details of his sex life.

His enemies insisted:

It's not the sex that's the impeachable offense-- although they couldn't stop talking about the sex--it's the lying!

Though nobody died for those lies.

Now the mob that practically lynched President Clinton is running the country, with the major media as their handmaiden.

And their President who would be King, George II, has been caught in a lie so big, Joseph Goebbels must be tipping his peaked cap in admiration from his grave.

Little Dubya told a lie, not about sex (unless he really does strap on a missile slathered with Crisco between his legs before mounting one of his beloved ranch animals).

No, the Great Pretzel Swallower didn't lie about sex, but about the basis for war.

So far, this particular war has killed untold thousands of soldiers and civilians, including hundreds of Americans, as well as more than a few British blokes, cost us billions of dollars in the midst of the worst deficit in U.S. history, gotten our leaders charged with war crimes by a Belgian court, served as an Al Qaeda recruiting symbol beyond Osama's wildest dreams, and shows no signs of being over, despite Top Gun Georgy's costume-drama proclamation of the end of major fighting on board the U.S.S. Lincoln.

Moreover, Gulf War II is but one part of the Perma-War condition into which the lies of the Bushites have submerged America.

So, which lie should be an impeachable offense?

A personal fib to cover-up a blow-job, or an elaborately orchestrated web of deceit, forgery and Big Internationally Broadcast Whoppers about Vast Stores of End-Times Armaments, for the clear purpose of terrorizing Americans into supporting war, even when all the evidence showed us that Saddam, Evil-Doer that he was, hadn't developed any major weapons since the Gulf War I.

So what if Saddam acted like he had something to hide?

A lot of men do.

Like I explained, almost a year ago in these pages, "Saddamis the kind of guy who brags he's got nine inches, then won't let you unzip his pants for fear you'll laugh at his actual four and a half (and he'd have to kill you for that)."

So, now we all know Saddam is just that type of guy, and we can all see clear-as-a-day-without-bombs that our President and his henchmen lied to us.

So which lie is worse-Clinton's or Bush's?

The sexual sin or the war crime?

The blow-job cover-up or the ruse for the rape of Iraq?

Obviously, covering up a blow-job is worse, according to Congress (also according to the TV pundits who are still after the Clintons, as evidenced by their enraged reaction to the blockbuster sales of Hillary's memoir "Living History").

And oh, those awful semen stains!

Much, much worse than the bloodstains across the ancient land of Mesopotamia, laid waste upon a Pack of Lies.

Hey now, there's a pack of playing cards I'd like to see!

Each card could have a different WMD that the Bushites lied about.

The Ace of Hearts could be the 500 tons of sarin, mustard gas and VX nerve agent.

The Queen of Diamonds could be the 25,000 liters of anthrax.

The Jack of Clubs would be the 38,000 liters of botulinum toxin.

The King of Spades would be the 500 tons of "yellowcake" uranium from Niger.

And so on.

According to Dubya's State of the Union Address, Saddam had enough weapons to blow us to the moon within 45 minutes.

A lie like this shouldn't even be protected by the First Amendment; it is the national equivalent of yelling "Fire!" in a crowded theater.

Sure, many of us knew the Shrub was full of it.

But some of us believed him (just like some of us believed that Billy Jeff "never had sexual relations with that woman"), and on the basis of that belief, we heaved ourselves and our loved ones into this major war that is just beginning, even as the scope of the lie comes clear.

For months, our troops have been bravely searching for these tons upon tons of horrible stuff from FrankenSaddam's evil laboratory (and the search, along with the war, continues), and all to no avail.

They can't even find enough poison in those two Winnebagos to kill a rat.

At this point, if anyone comes up with anything (a vat of lye? a really big can of Raid?), everyone will wonder if it's a plant.

So, caught in a lie, what does our leader do?

Remember what Clinton did?

He came clean--cleaner than any other American president has had to come about his sex life.

He was a man, a sexual man, and he apologized for his indiscretion and took his punishment, insanely overblown as it was.

And what does Bush do?

He blames the CIA.

Of course, Clinton couldn't blame the CIA.

Ever since the Puritans invaded this land, Americans have been sticklers for making us all "take responsibility" for sex.

Too bad we aren't so hypercritical of our leaders when it comes to war.

What A HOOT! Cut and Paste. Cut and Paste. Cut and Paste. Cut and Paste. No brains strikes again! If its in the Post it must be true! Cut and Paste.

Iraqis Were Set to Vote, but U.S. Wielded a Veto

By DAVID ROHDE

AJAF, Iraq --

American marines had built makeshift wooden ballot boxes.

An Army reserve unit from Green Bay, Wis., had conducted a voter registration drive.

And Iraqi political candidates had blanketed the city with colorful fliers outlining their election platforms -- restore electricity, rehabilitate the old quarter, repave roads.

But last week, L. Paul Bremer III, the head of the American military occupation in Iraq, unilaterally canceled what American officials here said would have been the first such election in Iraq since the fall of Saddam Hussein.

Overruling the local American military commander, Mr. Bremer decreed that conditions in Najaf were not appropriate for an election.

What A HOOT! Cut and Paste. Cut and Paste. Cut and Paste. Cut and Paste.
No brains strikes again! If its in the Post it must be true! Cut and Paste.

http://www.guardian.co.uk/Iraq/Story/0,2763,980453,00.html

Just another day in Baghdad

The demonstrating Iraqis have no work, no money and are desperate.

Two are shot dead.

Nearby, an American soldier guarding a gas station is casually killed

Rory McCarthy in Baghdad
Thursday June 19, 2003
The Guardian

Hussein Saber shook with fury as he lay on a dirty hospital bed last night and told the story of another day in Baghdad, a city torn apart by killings, misunderstanding and the startling failures of America's military occupation.

Yesterday Hussein, 33, should have collected a $50 emergency payment which all Iraq's now unemployed soldiers are due to receive.

The money did not arrive and so he and hundreds of other frustrated young men poured towards the gates of the US-led authority to protest.

Within minutes he was shot in his right side by a young, nervous American soldier.

Hussein survived but two other Iraqis standing next to him in the crowd were killed.

Just a few miles away in the centre of the city, gunmen in a passing car shot dead one American soldier and wounded another as they guarded a propane gas station.

It was another strike against the US military by an increasingly bold guerrilla resistance force intent on destabilising the reconstruction.

Neither the Iraqis nor the Americans ever dreamed that Baghdad would be like this, ten weeks to the day after Saddam Hussein's regime was finally toppled.

The people of this city are still gripped with the deepening problems of poor security, interminable power shortages and unpaid salaries.

Their frustration is spilling over into a spate of attacks on the US military, which are met with heavy-handed raids and mass arrests which, in turn, spark yet greater frustration.

Searing midsummer temperatures do little to cool tempers on either side.

"I hoped and I wished that when the American forces came they would bring us democracy and freedom but unfortunately we have seen the opposite," said Hussein, a non-commissioned officer in the air force for the past 18 years.

"The Americans are going to get hurt if the situation remains as it is."

All the junior ranks within Iraq's 400,000-strong military, which was formally dissolved last month, have been promised a one-off payment and the chance to apply for a job in the new Iraqi national army.

In reality none have been paid since their last wages from the regime in February or March.

Recruitment for the new military has not started and, like the thousands of regular government employees still without work, their frustration should be evident for the US authority to see.

Hundreds of former soldiers gathered at the national recruitment office in Baghdad yesterday morning where they expected to receive their payouts.

Similar payments have been made by the British army in Basra.

But yesterday when officials in the building told them they had no money to offer they poured towards the gates of the Republican Palace, once Saddam's home and now the base of the US-led authority.

In the eyes of the US military, the crowd of frustrated former soldiers was a threat and they eventually opened fire.

The Iraqi soldiers see themselves very differently - as husbands and fathers, struggling to make a living, gripped with defeated pride and disappointment.

Khadum Hussain Hani, 32, joined the Iraqi military aged 15 for the same reasons that brought many of the young Americans on patrol in Baghdad into the US army - he wanted to serve his country and he wanted a decent wage.

His brother, also a soldier, died during the war with Iran in the 1980s.

Following tradition, Khadum married his brother's wife and took responsibility for the couple's three young children.

Last year they had another son.

Until the war he was paid 75,000 dinars a month (then worth $37).

Since March he has received nothing and has had to borrow thousands of dollars to pay the 30,000 dinars monthly rent on his small apartment.

"I have borrowed and borrowed and all I have left in my pocket today is my identity card," he said yesterday.

Before the war he and his wife talked about whether he would fight.

"I told her I wouldn't fight. I was glad the Americans were coming to take us away from this oppression," he said.

Now he has to explain to his children why he has no work and no money.

"Sometimes they ask: 'Did you bring home any apples today father?'" he said.

"I tell them I will bring apples one day when I have some money."

It is all too clear that the natural goodwill that many Iraqis felt when the US and British forces brought to an end three decades of brutality and repression is rapidly fading.

"There is a big gap between the Iraqis and the Americans right now," said Khadum.

American troops speak freely of their own frustrations.

They patrol in heavy bulletproof jackets and Kevlar helmets in the suffocating midday heat.

Many were first deployed to camps in Kuwait nine months ago and have had little time to rest or recover from the intense three weeks of combat that brought them to Baghdad.

The shift from fighting to peacekeeping has been fractured and slow.

Still they are being targeted in guerrilla attacks and they don't understand why.

The al-Shawaf crossroads outside the Republican Palace, the bloodied site of yesterday's killings, has become the touchstone of the failings of the military occupation.

Here there are queues of the articulate and the plain angry.

The US officials who should be listening to their very simple and very real complaints are locked in a cycle of meetings from dawn until after midnight in the palace complex, behind the heavily guarded, barbed-wire entrance at the palace gates.

Alia Abbas Issa, 42, used to work in the palace as a seamstress, sewing curtains for Saddam's offices and private rooms.

She took the job to help pay for English lessons at the local British Council office.

It paid her well, up to 200,000 dinars (£2000) a month.

Then came the war.

Her apartment was looted of all her possessions, even her bed, and her job disappeared.

She is left caring for the two daughters of her younger brother, who died in Kuwait during the first Gulf war.

"There is nothing I can tell them. We used to have money now there is nothing. We cry from night until morning," she said.

"I thought the Americans would bring us a new start. We want to like George Bush but the Iraqis are suffering and suffering," she said.

"God will reward those people who come here if they come here to help us."

What A HOOT! Cut and Paste. Cut and Paste. Cut and Paste. Cut and Paste. No brains strikes again! If its in the Post it must be true! Cut and Paste.

From: Burr <pitzpho@earthlink.net>
Message-ID: <3EF4ABD1.1020404@earthlink.net>
Source record: 29360

Hi Frank,
About the train:

A runaway freight train reached speeds of 70 mph before it was derailed without warning Friday by Union Pacific railroad officials, sending a string of cars loaded with lumber into a Commerce neighborhood, destroying or damaging four homes and injuring a dozen people, none seriously.

So yes it did/was derailed!
What area do you live in, I would be glad to help you find fregs. in your area.
I have lots of stuff Ca. Just tell me where you and also can you read/handle WinScan 2.10 or I'll see you the list as text.

Source record: 29361

Burr <3EF4ABD1.1020404@earthlink.net>...

^ So yes it did/was derailed!

Yes, it was. I believe you. Casey wrote that you weren't getting any replies because you post facts, which nobody can argue with, instead of opinions, which can always be argued. So you changed your statement to read that "maybe" the train was derailed. Since it was no longer a fact I decided to through in an argument just for humor. My humor never works though.

^ What area do you live in, I would be glad to help you find fregs.

I live in a hole between Saddleback Mountain, Mount San Jacinto, San Gorgonio Mountain, and several local hills. I'm well protected from radio waves. I don't even receive television signals. It's good though because I'm only concerned about local traffic and the ability to receive long distance makes the scanner too noisy.

I can't think of any additional frequencies that I would like, but I appreciate your offer.

I love it up here and I stay here as much as I can. My business is in the Inland Empire where I have to stay to make a few dollars a few days a week.
Have you tried antennas like a ScanTenna, maybe a lead up the side of a hill. You should be able to DX short-wave well with an east west long wire with an "L".
Maybe you cold run a kite up when you want to scan, just stay out of storms and be sure to bleed off the static to grd.

Reuters, June 21, 2003

http://www.nytimes.com/reuters/politics/politics-iraq-usa-bush.html

WASHINGTON (Reuters) - President Bush, trying again to explain the failure to find weapons of mass destruction in Iraq, said on Saturday that suspected arms sites had been looted in the waning days of Saddam Hussein's rule.

``For more than a decade, Saddam Hussein went to great lengths to hide his weapons from the world. And in the regime's final days, documents and suspected weapons sites were looted and burned,'' Bush said in his weekly radio address.

It is believed to be the first time Bush has cited looting to explain the inability of U.S. forces to uncover chemical or biological weapons in Iraq, a U.S. official said.

Bush had previously said weapons may have been destroyed before the war.
The U.S. military has been criticized for failing to prevent looting at
an Iraqi nuclear facility.

Bush has been widely criticized for misleading the public by asserting that Saddam had stockpiles of unconventional weapons that menaced the world. The allegations were Bush's main justification for bypassing the
United Nations and ordering the U.S.-led invasion of Iraq.

``The intelligence services of many nations concluded that he had illegal weapons and the regime refused to provide evidence they had been
destroyed,'' Bush said. ``We are determined to discover the true extent
of Saddam Hussein's weapons programs, no matter how long it takes.''

This week, Bush dismissed questions over his reasons for going to war as
the work of ``historical revisionists.''

In his radio speech, he sought to address problems in post-war Iraq, including attacks on U.S. troops and the slow pace of reconstruction.

``American service members continue to risk their lives to ensure the liberation of Iraq,'' he said, blaming ``dangerous pockets of the old regime'' and their ``terrorist allies'' for the attacks. The U.S. military was combating the threats by hunting down Saddam loyalists and
``terrorist organizations.''

The United States has provided more than $700 million in humanitarian and reconstruction aid for Iraq, Bush said.

With its allies, it was fixing water treatment plants, boosting electricity supplies and vaccinating children. A $100 million U.S. fund,
billions of dollars in recovered Iraqi funds and revenues from oil sales
will help pay for reconstruction.
"You can tune in for ten minutes and figure
out what [Rush Limbaugh] has been talking about
the past two months. Well, in this case, two years
... he's STILL talking about Clinton."

BAGHDAD, June 19 -- Facing daily assaults from a well-armed resistance, U.S. troops in volatile central Iraq say they are growing frustrated and disillusioned with their role as postwar peacekeepers. In conversations in a half-dozen towns across central Iraq, soldiers complained that they have been insufficiently equipped for peacekeeping and too thinly deployed in areas where they are under attack from fighters evidently loyal to deposed president Saddam Hussein. Others questioned whether the armed opposition to the U.S. presence in Iraq may be deeper and more organized than military commanders have acknowledged.

"What are we getting into here?" asked a sergeant with the U.S. Army's 4th Infantry Division who is stationed near Baqubah, a city 30 miles northeast of Baghdad. "The war is supposed to be over, but every day we hear of another soldier getting killed. Is it worth it? Saddam isn't in power anymore. The locals want us to leave. Why are we still here?"

[...]

Some soldiers are vexed by what they see as a contradictory reception from Iraqis. Sometimes the public appears welcoming, sometimes actively hostile. The problem recalls other military U.S. deployments, including in Afghanistan, where it can be difficult to distinguish friends from enemies.

"The way it seemed is, once Iraqis got over being grateful for getting rid of Saddam, they found out quickly they don't want the Americans, either," said Sgt. Nestor Torres, a military policeman with the 3rd Infantry Division in the restive town of Fallujah, 35 miles west of Baghdad. "Everyone is blending in with everyone else, so you can't tell the friendly ones from the hostile."

Torres is a bodyguard for the division commander, Maj. Gen. Buford C. Blount III. "When I look around, I've got to wonder who wants to shoot my boss," Torres said.

Peacekeeping duty in Iraq has made soldiers particularly vulnerable. Troops at police stations and on guard duty at banks, electrical installations and fuel stations are frequent targets of sniping. Soldiers have been fired on when delivering propane gas. Bystanders throw stones at them when they are constructing soccer fields or fixing schools.

They're small devices shaped like a coaster that restaurants give you to take to your table. When your meal is ready, they hit a button behind the counter, and your 'coaster' vibrates and flashes some LED's to get your attention, and you go get your food. Also used in large restaurants that serve your food to you, to let you know they are ready to take your order (say, you're sitting at an outside table waiting for an inside one).

Rising U.S. Death Toll In Iraq Spurs Concern

9 Soldiers Killed in Attacks This Month

By Peter Slevin
Washington Post Staff Writer

Friday, June 20, 2003; Page A16

Inside the Bush administration, where top officials resolutely emphasize postwar progress in Iraq while playing down the setbacks, the rising American death toll and the increasing number of attacks on U.S. troops are causing increasing worry.

The death of a U.S. soldier yesterday near Baghdad brought to nine the number of troops killed in Iraq this month in a string of sporadic rocket and sniper attacks.

Fifty-four Americans have died in accidents or military action since President Bush declared the war ended on May 1, equal to more than one-third of the 139 wartime deaths.

Bush and his top military and foreign policy officials define the casualties as a necessary cost of a successful military occupation.

They say the deaths, while painful, are secondary to recent progress on economic and security issues.

Burr <3EF4CCE7.9020002@earthlink.net>...

^ Have you tried antennas like a ScanTenna, maybe a lead up the
^ side of a hill.

I live in an apartment so that sort of antenna would have to be in my living room. I've considered asking the management to let me place an antenna on the roof of the building where some people have satellite TV antennas, but then I would have the trouble of receiving much more than I want to listen to. Some of the frequencies I listen to are state or national frequencies, such as search and rescue and Civil Air Patrol. With local reception only I get to hear what's happening in my vicinity and I don't have to listen to scanner noise continuously. This way, I won't lock something out or turn the scanner off and miss something important.

^ You should be able to DX short-wave well with an east west long
^ wire with an "L".

I have one of those tacked to my ceiling and it works well. For a long time it was the only thing that would work for the nearest NOAA transmitter (on 162.5) and I kept it on my Sony AIR-8 for just that purpose. But now with my new multi-element homemade antenna I can hear 162.5 just as well on my desktop scanner so the long wire is no longer used. The only problem with my multi-element antenna so far is that it receives a little more than I would like and I have to lock out my SAR frequencies which are shared by an ambulance company in the next county.

^ Maybe you cold run a kite up when you want to scan, just stay out of
^ storms and be sure to bleed off the static to grd.

Are you telling me to go fly a kite?

Frank

I have not tried to use the computer interface since I got a new computer 2 years ago. It runs WindowsXP pro.

I see that Sony discontinued making this model and it is no longer supported. (I think)

I have the original disk with the original software installed.

When I go to plug in scanner I get a flashing PC-CNT and that's all I get. No access to the software. I think my problem is the cable. On the receiver, the pin in the 3 o'clock position (The arrow is at 12 o'clock) is about 1/4 smaller than the rest of the pins. Could someone look at theirs and let me know?

Also, the scanner works fine on batteries.
Does this software work on WindowsXP? And if not is there a way around it?

Thanks, Bob

Alinco DJ-X2000 E
Unblocked
Serial Number T000594
Original box
Manual
Includes ESC-29 soft carrying case
2 extra rechargeable NICAD batteries EBP-37N (4.8 VDC 700 mAH) (three total included)
2 each empty EDH-16 cases for 4 AA batteries (either alkaline or NICAD)
Desk-top drop-in quick charger EDC-88

Only $500 including shipping

Main Features DJ-X2000E

a.. 100 KHz ~ 2150 MHz continuous coverage
b.. 2000 memory channels in 50 banks, 40 channels per bank
c.. WFM, NFM, AM, USB, LSB, CW modes in many different tuning steps, including user-programmable step.
d.. Fast scan speed
e.. Easy to read dot matrix LCD display
f.. Alphanumeric channel names and name tag search engine
g.. PC programmable (See software details below)
h.. Help Navigation so powerful, you may never need the manual (enters directly to the set mode of relative parameters from the help menu!)
i.. Two-mode "Bug" detector finds hidden transmitters
j.. Instant search function locks onto the nearest, strongest signal (new circuit design, patent pending)
k.. Frequency counter, accurate to 1 ppm, uses digital TCXO first time in the receiver industry.
l.. Field Strength meter
m.. S-meter activated beep alerts you to nearby calls
n.. Record up to 160 seconds of audio in digital memory
o.. Inversion decoder for scrambled audio
p.. FM stereo receiver (requires optional stereo headphones)
q.. CTCSS decoder/tone scan
r.. Two-level attenuator reduces strong or interfering signals 6 or 20 dB
s.. 24 hour timer
t.. Use 10 ~16 VDC external power or internal batteries (an optional DC cable is required for external power source)
u.. Battery level indicator and battery save feature
v.. Ni-Cd battery and quick charger included.

w.. New design rubber-duck antenna for better reception, especially at lower frequencies.

Specifications DJ-X2000E
a.. Receiving Range: 0.1000 to 2,149.999950MHz Continuous (ie No Gaps)
b.. Mode: NFM/WFM(mono,stereo)/AM/CW/USB/LSB
c.. Antenna imp.: 50 ohms
d.. Antenna terminal: BNC
e.. Supply voltage: DC 4.8V (Ni-Cd battery pack EBP-33,34,37N), DC 6V with EDH-16 AA battery case, DC 10-16V external power source.
f.. Typical operation with Alkaline AA in EDH-16: 30hours (1:4 battery saver ON)
g.. Current consumption: approx. 150mA in normal reception, approx. 50mA with 1:4 battery saver at 6Vdc power source
h.. Operating temperature: -10 to 60 C or 14 to 140 F
i.. Frequency stability: Within +/- 2.5 ppm at operating temperature range AF output: 100mW or more 10% THD
j.. Channel steps: Auto, 50, 100, 200, 500Hz, 1, 2, 5, 6.25, 8.33, 9, 10, 12.5, 15, 20, 25, 30, 50, 100, 125, 150, 200, 250, 500KHz, user-programmable
k.. Memory channels: 2,000 / 50banks, 40channels in each bank
l.. Program-Scan: 20 pairs
m.. Priority watch memory: 1
n.. Dimension without projection: 57 x 150 x 27.5 mm
o.. Weight: 200g
p.. System: Triple-conv. Superheterodyne
1st IF: 814.5MHz or 304.3MHz
2nd IF: 45.05MHz
3rd IF: 455KHz
q.. Typical sensitivity:
FM/WFM 12dB SINAD, AM/SSB/CW 10dB S/N
a.. AM:
0.1 to 5.0 MHz: 1.5uV
5.0 to 900MHz: 1.0uV
b.. SSB/CW:
0.1 to 5.0 MHz: 0.6uV
5.0 to 900MHz: 0.5uV
900MHz up: 1.0uV
c.. NFM:
5.0 to 900MHz: 0.5uV
900MHz up: 2.0uV
d.. WFM:
5.0 to 900MHz: 2.0uV
900MHz up: 4.0uV
(An indication purposes only. The actual value may vary depending on where it is measured.)
e.. For more info goto http://www.javiation.co.uk/

Strangely enough I can activate a small RF oscillator on the order of a few
milliwatts and be heard under certain conditions around the globe.

It is not far fetched to assume that a High Power mobile transmitter with
gain antenna and receiver is capable of activating and detecting said tags.

Hi All

I had an interesting experience with the Washington State Police yesterday. I decided to go down to the US because of the low US $$$. Of course no security check at the US border just a wave through but coming back was another experience. As I was approaching the Canadian border after a day of shopping I came up on a police road block about 200 yards from the boarder. Being a Ham I have a small antenna farm, (2 small antennas) growing on my small car. Without even checking to see what radio I had one cop asked me what my ham call was. This took me by total surprise as that this cop could tell the difference between a Larson duel band antenna, a scanner antenna, a CB antenna or a commercial VHF antenna. My radio is a Yeasu FT-100d with a remote kit and it is hard to see from outside the car. I don't have a ham plate on the car either so how did he know that I was a ham? I was glad that I had my Industry Canada pocket card with me. He also asked what the furthest contact was that I have had. I am also glad that it wasn't just my scanner hooked to the antenna or who knows. One other thing is that they weren't Customs officers but just regular police and their was no computer terminals around for them to run my plate or cross reference the Industry Canada data base. It is just interesting that maybe the cops are getting smarter who knows.

Do you have a real serial port or are you using a USB adaptor? that
won't work
Make sure the com port setting is correct - It should be COM 1
Slow down the COM port as low as you can.

Good story, Frank. I'm a fan of wire antennas also. I first started using them with ham radio and have since adopted them to other radio activities (both indoors and out). Cut to the desired frequency, they perform better then most store bought antennas.

Did you ask if he was a ham operator? If so, it is not all that surprising he would recognize your antennas. Several police officers in this area are and, just like any other ham operator, can easily spot another ham.

The Afghans had to kill hundreds (if not thousands) of
Soviet troops to force them out of Afghanistan.

The Iraqis will have to REALLY crank it up or they'll
never get rid of us.

No I didn't ask if he was a Ham because I know that if you try to do anything besides answer the questions they will take you off to one side and strip your car down then after about 1 hour they will let you put it back together. One time I asked a question to a customs officer and ended up looking down the barrel of a shotgun on the US side. Coming into Canada 2 years ago I made a comment to the Canadian Customs Inspector about having a nice trip and got yellow carded. After being personally searched they then had us go out to our car and watch as they striped it down. We did have fun waving at all the other people that were laughing at us as they passed. I know that these 3 were cops but that close to the border and on the US side it is best to shut up and not get shot. The cop didn't recognize that I had a mag-mount CB antenna on the roof and the Larson I have looks like a loaded scanner antenna or wide band commercial VHF antenna. I did think about him being a Ham but then again I don't think so.

Last night I heard general BS on something Call "Black Jack Fox 4" on 148.5. They shot the bull about shopping at a Kmart store.

This sig came from the North Nellis area "DreamLand" and I am wondering just what BlackJack channel is for and who uses it.

Hey pencil-dick: Try and wrap your peabrain around the following

1) I didn't flood those groups. I want to see your proof that it was me. In Court there's a saying: He who alleges a thing must therefore also prove it. You made an allegation I flooded the groups. Prove it was me. I can prove it was not.

2) I've 'been reported to (my) ISP'? Oooo. I'm just shakin' in my boots. Guess what idiot? I'm still here, online and my account intact and in good standing.

3) 'by a lot of pple'? What's pple? Pineapple? Pimple? Purple? Oh! People!(LOL) Oooooo. how many is a lot? Let's see now.....2 is a couple, 3 is a few/some, 4 must be 'a lot'. Yeah. That's the ticket! 4! And they all live inside your demented, hallucinatory, fevered and demon-possessed brain. Guess what idiot? I'm still here, online and my account intact and in good standing. Repeat that until it sinks in. Or until Martha Steward walks up to you and jerks you off.

Now put the pie plate on your head, stand outside and stare into the sun while doing the following: Click your heels and repeat: There's no place like home. There's no place like home. There's no place like home.

And to you, your sock puppets, and your imaginary friends, FAQ thumpers and other assorted non-existant things that live in your head and go 'bump' in the night: Fuck off...and by the way.....

PLONK Hahahahahahahahahahahahahaha!!!

2462. Florida MilAir Comms Broadcast now Playing – Non Stop Audio!

Newsgroup: rec.radio.scanner
Date: 2003-06-22 15:08:56 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <3EF5C688.4070804@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 29393

Iï¿½m now playing at www.MilAirComms.com MilAir comms that were recorded on 6/16, 6/19, and 6/21. Since this was done with VOX recorder it is non stop audio, no dead airï¿½ During these recordings youï¿½ll hear numerous Dutch F-16 training missions in the Atlantic offshore warning areas off the Florida coast as well as bombing runs in the Avon Park Range.

This recording was made from 4 scanners feeding an audio mixer allowing all 4 scanners to be simultaneously recorded

This will be broadcast in a continues loop which Iï¿½ll keep broadcasting until late tonight. Have fun, if youï¿½ve never heard MilAir type comms take a few minutes and listen. You might find you like it and decide to take up the hobbyï¿½..

Remarkable. I have never encountered such a device. Seems funny in a
B.F. Skinner or Pavlov kind of way. Sit down, await stimulus, receive
stimulus, respond by getting food.

Here in NYC, the folks at the counter/register just yell at you when
your sandwich is ready.

Thanks for filling me in,

Hey shit-4-brains:

You can't do it can you? You can't provide the proof that I supposedly spammed the group. You babble about Google but it's a copout. When it doubt, aim for Google and hope it sounds official. Fuck off.

You are such a little puke. If you were standing here in front of me I'd bitch slap you so fucking hard your teeth would go down your throat, out yer ass and mow the neighbor's lawn with them.

Oh and I'll PLONK you as many times as I feel like it. You think you're such red hot shit just because you nym-shift and get your sock

puppets to speak for you. Take a look at all the fucking headers, Your bad spelling and sentiments give you away. Moron.

Btw: provide me with proof of spam you allege I sent.

In the meantime....*PLONK* your bad spelling, PLONK your bad breath, PLONK your tiny little mind and PLONK you for supposedly going through TaraNews.net and here are the header references I'm referring to.

I'm looking forward to Martha going to jail. And you hanging yourself. Or jumping in front of a subway car or bus or train or truck.....(get the picture?) a two-fer: That's good thing!

PLONK! (Hey! This is FUN!)

Martha Stewart Jokes and pictures:
http://politicalhumor.about.com/cs/marthastewart/

Don't forget to supply me with YOUR proof, puke-breath little weasel.

I would advise anyone trying to manage a scan list that large to use computer control. It can be done manually, but the computer makes the job infinitely more efficient.

Message-ID: <3EF5FDF3.9000109@licensed4funREMOVEBEFOREFLIGHT.com>
Source record: 29302

I have a local friend whoï¿½s looking for a good antenna, primary interest is MilAir. He can receive local public safety comms with the included telescoping antenna so he doesnï¿½t care about that, MilAir is where he needs help.

He doesnï¿½t have an attic, however his neighborhood doesnï¿½t have restrictions he still wants to keep his antenna as hidden & low profile as possible. No other houses in his area has any outdoor ants, not even TV ants so he just doesnï¿½t want to stick out as itï¿½s a fairly mid to high class area. He could put something up at about 15ï¿½ high. Iï¿½ve suggested the ScanTenna however he wants something a bit more low profile.

My next thought was the NilJon SuperM Base (http://www.niljon.com/pages/10/index.htm) however I donï¿½t have experience with this antenna. I have a NilJon Mobile and it does excellent for MilAir while mobile.

Can anyone offer other suggestions or anyone personally have experience with the NilJon Base antenna for MilAir monitoring?

Thanks for you time, always like helping new comers to our hobby as they buy equipment, they specify they want MilAir freqs in their scanners, and with a growing customer base more scanner manufactures will continue to include MilAir. Scare away the customer base and watch how fast milair disappears from new scannersï¿½.case in point ï¿½ RadioShack/GRE.

>As for the wide FM to monitor the FM broadcast band and TV audio,
>why would anybody want that in a SCANNER!

Anyone who thinks that TV and FM Broadcast are the only WFM
transmissions on the air has a ways to go before he can call himself
an expert on spectrum utilization.

>The 96 uses commonly available AA batteries instead of a proprietary
>battery pack, and these can be charged in any standard charger, no
>optional/supplied charger needed.

Proprietary packs are smaller, making the scanner smaller, and the
extra pack easier to carry.

>If it follows the previous GRE-made RS scanners (and it looks like
>it does) the computer cable can be made at home using common parts instead
>of a proprietary connector.

A two-way cable requires more than a couple of parts. Unless you have
the capability to etch your own small circuit boards, and you actually
like fabricating circuits, it's not practical to homebrew.

Plus, with the Rat Shack units, data transfer takes several minutes,
and reaction tune and computer control are not possible.

>9600 baud control channel is "THE" APCO P-25 standard, better get
>used to it, pretty soon 3600 baud will be the exception.

By the time most people will need it, there will be a lot more choices
on the market.

Click on the video link below.
It includes pics of actual wireless motion
detector sensors that are buried around Groom Lake.
He was also using a Startronics Broadband RF Sniffer
All of this is in the VIDEO at the KLAS site below!!

http://www.klas-tv.com/Global/story.asp?S=1330758&nav=168XGVQf

From LAS VEGAS REVIEW JOURNAL
June 21, 2003:

ONGOING INVESTIGATION: FBI raids home near Area 51
By KEITH ROGERS
REVIEW-JOURNAL

Man says authorities were searching for
photos, data about classified military base

FBI agents and other law enforcement officials raided a Rachel man's rented trailer home Thursday while he was out of state, searching for what he said were photographs and data stored in his computers about the classified military installation known as Area 51.

"Area 51. That's what it's for," said the man, Chuck Clark, when asked by telephone about the search warrant that he found Friday on a table inside the trailer in the rural Lincoln County community, 100 miles north of Las Vegas.

"They timed this very nicely while I was in Denver with a TV crew," said Clark, 57, author of the "Area 51 & S-4 Handbook."

Clark said he thinks the search warrant was triggered by his research into motion-detection sensors that are buried on public land along trails miles away from the restricted area around the classified installation near the dry
lake bed of Groom Lake, 90 miles north of Las Vegas.

Clark and other Area 51 buffs think the sensors are linked by radio signals to an automatic alarm network that alerts the installation's security personnel
about possible intruders.

"I dug them up, photographed them, recorded their GPS and put them back," he said, referring to Global Positioning System coordinates.

"I resent the fact they put them on public land. All I did is document them
...

to make an issue of putting them outside of restricted land," Clark said. He described himself as a semi-retired photographer and writer who has spent 10 years researching Area 51.

Clark said the search warrant was issued by U.S. Magistrate Judge Lawrence Leavitt and that the agents who executed it left a four-page inventory of items
seized. An FBI spokesman in Las Vegas, Jim Stern, confirmed that a sealed search warrant had been executed on Clark's residence Thursday.

The FBI agents were accompanied by other law enforcement authorities who were part of a task force, but Stern declined to confirm the nature of the task
force.

There were no arrests, Stern said, noting, "This is an ongoing investigation of Clark." He said items were taken from Clark's residence but declined to give details
about what prompted the investigation. He also would not comment on the scope of the search warrant or say what was seized.
"That area is of a concern just by virtue of location," Stern said, referring to the general vicinity of Rachel Nevada.

An annual presidential directive issued by President Bush and former President Clinton keeps government information about the Groom Lake installation
classified.
Clinton, in 1995, became the first president to sign the annual exemption, which stemmed from lawsuits brought by widows of two men who claimed that their husbands died from exposure to hazardous and toxic materials while they
worked at the installation.

Government officials will not say what activities are conducted there but the Groom Lake facility has been widely reported to be where high-tech U.S. aircraft are tested against foreign radar systems and planes. S-4 is located near the southern edge of Area 51.

Given what I hear from the American contributors to this and other NG's, I'll be exercising a little "paranoia" of my own when I holiday in your fine country later this year. We might be forgiven for getting the idea that possessing either off-white skin, a foreign passport, or failing to wear "I love George Bush" T-Shirts in public places were all capital offences.

UK readers should be assured that "real" Americans bear little resemblance to those heard loudest on these NG's. They're really quite human friendly folk. - Dunno about American cops though......

It is worrisome when an 'I love George Bush' T-Shirt would cause
problems. That might SOMETIMES have a different meaning than
'I love Bill Clinton' also :-).

The real problem isn't when there is some political bickering, but
when it is wrong to be appropriately and politely patriotic. People
SOMETIMES confuse patriotism with support of the party in power.
Intolerance of patriotism and/or right/left viewpoints is a problem
from all sides of the political spectrum, perhaps most disappointingly
from the dead liberal left which has morphed into a radical doctornaire
movement.

ID Tracker has been updated.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTracker.htm

Please read the installation notes if you are updating from a previous
version.

http://bellsouthpwp.net/k/d/kd5eis/IDTracker/IDTrackerVersion.htm#InstallNotes

New features for V2.6.0

- Added I-Call support.
- Added support for tracking limit searches. ID Tracker banks 11 to 20
correspond to scanner limit search banks 1 to 10. This is not supported for
the BC245.
- Logging / Recording settings are now set per bank.
- Options added to disable logging and recording for all banks.

Maybe he's a ham, or has a friend/relative who is. I just got back from Ham-Com in Dallas, TX and while driving through I came up along side a police officer in his patrol unit. As I usually do, I smiled and waved to the officer. In return, he reached over, picked up an HT off the seat and came up on the local repeater with "Nice-looking truck, bet you're going to the hamfest. W5***" (callsign deleted to preserve his privacy). Hams come from ALL walks of life!

Is there a computer program that i can run on my computer to
record only when someone is talking. I can hook a mini in my headphone
jack on the scanner and a rca in my soundcard.
Thanks for any info.

Smaller=Less capacity, plus the Uniden pack is a poorly thought out deal
with the short cable and plug instead of a lock on pack. Besides, if
you drop it, and damage a cell, you are dead in the water, if a AA batt
goes bad, regardless of where you are, you can get AA nicads or Alkies
just about anywhere, and most GRE scanners can use the AA battery
"clip" sold by just about every RS with a 5 second mod (clip a slot in
it).

So you buy one for 20 bucks if you don't want to mess with it.
>
> Plus, with the Rat Shack units, data transfer takes several minutes,

On a handheld, computer control is not a problem, it kind of defeats the purpose of a handheld anyway.
>

> on the market.

That's probably true, but with the non existant "Uniden quality control" of the 235 and 245's, the GRE built units are usually a better long term choice (My 92 was the excepton). I have pesonally fixed over a dozen 235/245's with unsoldered antenna, audio, or other jacks. Usually it was only one unsoldered jack, but a half dozen had two, and one had all three. The amazing thing was all but one worked out of the box and long enough to get programmed and used for while. I've seen GRE units with unsoldered antenna jacks, but not really any other assembly screwups. Besides, the Uniden's are very cheaply made in general compared to the GRE radios.

Picking up Salt Lake Center on 385.8

Also lots of grass fire in Kern County with lots of auto wrecks.

Last night I was listening to a big one car accident with three red tags (bad hurt) and one still penned in. They sent two helicopter. This morning the woman that watches my dog came over and said she had to go over the hill, her best friend was in a bad car accident last night. I asked a few questions and it was her friend I had listened to.

Small world.

2500. How to increase scanner sensitivity?

Newsgroup: rec.radio.scanner
Date: 2003-06-23 06:52:48 UTC
From: achilles03@hotmail.com
Message-ID: <fef44ceb.0306222252.5af5a864@posting.google.com>
Source record: 29331

Are there any antennas available to increase the sensitivity of a handheld scanner? I imagine it's not an easy solution, as the scanner has a huge frequency range and antenna dimensions and geometry are frequency dependant. However, if I wanted to increase sensitivity on, say, the scanner's 2m band, would an antenna designed for the 2m band be acceptable? If so, what effect would this have on the reception of other frequencies/bands?

Any insight or knowledge is greatly appreciated!
Thanks!
Dave

We all have stories of con artists we could tell.

Ebay doesn't have the quality of honest sellers is did in the past.

I have one from an electronics seller in Portland CT.
He sells damaged radios as in excellent working condition.

Your spinning yourself.

Lynch is no hero. Heroes are soldiers that make a fantastic move while in action and save other soldiers from the enemy. All she did was get captured from her supply truck. It's obvious you where not in the military or you would know that.

If Lynch is considered a hero, then the guys in the fighting are SUPER HEROES.

The only hype being put on her are the people in the media.

I wouldn't believe a darn item from the Times.

Do you really believe people are going to sit around looking for something like this to report? Reports are more likely to come from those who overhear suspicious activity while casually listening for recreation purposes. Such people are neither over-zealous or idiots.

Actually, even if people were sitting around looking for something to report, I simply don't understand why anyone would want to put down them down for doing so. Where is the harm in looking for and reporting suspicious activity? Do you have some reason why you would not want such activity reported? If not, then again where is the harm in it?

Good grief, what did you ask the officer? I can't think of a simple question which would solicit that type of response.

You don't have very much luck with police and customs officers, do you? I've crossed into and out of Canada probably more than a hundred times, all without any experiences like this. My vehicle was only search once, and then each section only glanced at for a few seconds.

My brother-in-law was asked if he had any guns . He replied Doesn't everyone ! :0 WRONG ANWSER they had him pull over . All of the kids 6 of them, got out of the car . Don was talking to the cop and turned around and all of the kids had their hands up on the car top and feet spread ready to be searched.
They spent 5 hours that day having the car dismantled. LOL

You mean, like Uniden, where I've read dozens of reports where the digital audio has to be tuned for each system, so that if you have two or more digital systems in your area, what works best for system A might result in you being unable to understand system B, unless you retune the audio. Yep, great system!

>
> ..." Automatically switches between analog FM and digital."

Why not? You're doing the same thing with the features the 96 has that the 250D doesn't

>In a handheld scanner,
> TV audio, FM broadcast & wireless stage mic pickup are extremly

To you, maybe. To paraphrase you: "You Pick a band or mode YOU want, & infer All of us want it??"

> useful, & I don't need to carry 3 or 4 portable radios like I would
> with the Pro-96. The Ability to get breaking news on a TV station or
> Broadcast channel is a plus!

Well, if I want the breaking news from a broadcast outlet, I'll scan their two-way radios, not the commercial broadcast signal. As to why I exclude those freqs from a "scanner", how do you "scan" a continous signal. You can "monitor" a broadcast signal, but you can't "scan" it, anymore than you can "scan" the NWS broadcasts. As to monitoring the TV/FM/wireless mikes, etc, I'd use a wide band receiver such as the Icom R-2, the Yaesu VX-120, or the like, and use my scanner to SCAN. Besides, i thought the whole idea of having a scanner was to hear things live, before it's on the news.

> ..."I'll grant that the missing Mil Air band is drawback."
>
> Oh gee, the Pro-96 REALLY has a single Drawback in your eyes??

I said "a drawback". Are there others? Remains to be seen. Unlike you, I'm capable of keeping an open mind until such time as the scanner is on the market and being used in real world situations.

> century!

Right, so the next time you are at an event, and your Uniden battery pack runs down, you'll just run to the local Quik-Trip and buy another battery pack, right? EVERY portable radio I own, scanner or amateur HT, can be powered by commonly available AA batteries. That means I can stock one type of battery in my emergency "Go Bag" and be assured that any radio I want to use can be powered. I've got more misc. AA battery chargers around my house than I can count anymore. The cheap wall warts supplied with most radios and scanners (including Uniden's) get thrown in a shoebox, out of the way. And you can't compare the battery drain of a cellphone with that of a scanner. A scanner pack, such as the one for my BC-245 (and yes, it's a high capacity NiMH pack), has to be recharged after 6-10 hours of use. My Nokia, with an oversized 3600 mah battery (and you can't do that with the internal scanner battery), will last almost a week between charging. Remember, 21st century "Hi-Tech" doesn't always mean more reliable.

> parties (which you can also do with the 250D)

Yeah, I've heard such great things about Uniden's software for the 250D!
ROTFLMAO!!! And when that great Uniden-supplied cable breaks, you can order
another from Uniden and wait two weeks for it to arrive (if they even have
it in stock). I can sit down and homebrew a new cable in an hour or two,
although the cable for the 96 is less likely to break in the first place.
Doesn't have that cheesy proprietary connector like Uniden's.
>
> "... And don't forget the 10 V-Scanner folders..."

> control the scanner & being able to scan more than 500 channels at a
> time Too.

V-Scanner folders allows you to carry 11 different configurations for your
scanner, so you don't even need th hook it up to a computer to change
things. I'd be able to go from Dallas to Denver, and scan either city
without having to reprogram it via a computer. Certainly makes up for
"only" having 500 channels instead of 1,000. (Like anybody can really
monitor 1,000 channels at the same time, and actually understand what's
going on.)

72 Mhz band: "Fixed Control and Relay Only", "Remote Control", and
"Industrial Services 1-Watt In-Plant Use" Yawn

1296 Ham Band: the Pro-96 covers 1240-1300 Mhz.

As others have stated, the full APCO P-25 standard is 9600 baud. Uniden
rushed (If I can use that term for a scanner that was month's late in coming

out) to market with a scanner that wouldn't do the job it was advertised to do. Instead, you have to wait (how long?) for a second generation Uniden scanner to do it right (maybe). As for superior, you are using circular logic. Won't wash. I've read comments from a lot of people, such as those on the BC250D Yahoo group, who have been very disappointed with the performance of the 250D. Don't like the Radio Shack models, that's your business. Just 'cause YOU don't like them, doesn't make them no good.

This is an unusual radio and not often seen any more
Covers 50-904.995 MHz continious
The main screen is a band scope.
100 memories
10 search locations

Comes with radio, power supply and a copy of the manual

$325 shipped CONUS USPS Priority
I take and prefer Paypal
Greg

Burr,

Pay no mind to the troll that masquerades as me. Nothing wrong with it, infact I've often thought that there should be an alt group
dedicated to incident notification. I think that would be really cool - sort of a big incident net for the whole country or even the
world.

You've got the time and desire, why not look into starting a incident notification newsgroup? alt.radio.scanner.incidents maybe?

Keep it up - I like to hear what goes on out there southwestern "Dreamland".

Detectives operating in the area up by me on PHX PD 450-7 (453.525). Someone's been a bad boy (or girl).... Low power, they're real
close - sorry not giving exact details on location, for their safety. I'll give you a hint though - if you are in North Phoenix you
might be close enough to hear them. Mostly on the B side (simplex) so it's not on the repeater. Enjoy!

I was a traveling photographer in 1988 and was looking for a place to stay. All of the hotels and motels on the Canadian side were full so my partner and I decided to try to stay across the line. His car had all of the camera equipment in it. To make a long story short I got through and he got carded so I went to ask him about the camera equipment. I asked the inspector if I could talk to him and he hit the deck with his semi-auto leveled at me. When the guys in the booth and the office saw this on the video monitors 3 shotguns and a second semi-auto were leveled at me. I learned that you don't say anything and don't get out of your car. This was back in the days when Canadian Customs didn't even carry guns but I found out that the US sure did.
One other thing about the last trip across on Friday going into the US one of the cars one lane over from me stopped a little too close to the inspector as he was searching the car in front and out came the gun. That made for a tense few moments.

Well, Okay, I guess so. What IS far fetched IMHO is that WalMart or Gillette would have a use for tracking the item once it left the
store. I can't imagine a secret Gillette/Walmart spy satellite in orbit activating and counting tags without also picturing Mike
Myers as Dr. Evil, masterminding it all from his secret Volcano Lair..

I would think counting tags affixed to boxes of tin foil would be more useful.

Just curious, overall what are your thoughts on this scanner and will you get one or not? Not looking to start a flamefest, just
honest opinions.

I'll go first - I intend to get one. The ability to preload it with 11 different configurations for traveling combined with 9600
trunking and digital decode make it an ideal addition to the collection. I give it a "hell yeah". ;-)

I work for a company based in Vancouver, and my wife's family is scattered all over the vancouver area, and several places on Pt Roberts, so I'm through the Blaine and Pt Roberts crossings fairly frequently. I've NEVER had any problems with the border guys on either side, and my car has been called a porcupine more than once.

Three dual banders, Doppler DF rig, and two GPS antennas. I've trimmed down recently.

On one trip, I ran over 7500 miles, and a ton of border crossings before anyone even noticed that the car had no plates on it. (new car) I did have the piece of paper taped to the window, about credit card size, on the passenger side, which nobody bothered to look at..

To the Group:

I am from the state of Massachusetts (USA). I have reason to believe that law enforcement has had me under surveillance for quite some time now. I can't say for sure what the reason is, but it may stem from an earlier heated dispute with the neighbors involving my mounting a security/ surveillance camera to keep watch over my front property and a portion of the street. Anyway, I need to find out what "hidden" frequencies they may be using to carry out their surveillance and harassment campaign against me. Any suggestions? (Thanks in advance.)

T.G.

Anthony,
For starters you should have be scanning the FACSFAC Vacapes, VA frequencies (GIANTKILLER) which you can find here: http://www.milaircomms.com/uhf_facsfacva.html They handle the traffice of the Atlantic Coast.

Next you could program in both NewYork Center and Washington Center UHF freqs. They'll be handling inroute Military traffic. You can find the frequencies as well as maps here:
http://www.milaircomms.com/artcc_zdc.html (Washington Center)
http://www.milaircomms.com/artcc_zny.html (New York Center)

And finally you could check out what Aerial Refueling Routes/Areas are near you and program in the freqs associated with these AR Routes/Areas. Both frequencies and maps can be found here:
http://www.milaircomms.com/refuel_tracks.html

That's a start.
BTW I'll be sending your bracket tomorrow, have to go up in the attic to find my BC780 Boxes....

George

I really don't know what to say about all the horror stories. My wife and her daughter and I drove through to Alberta and entered in North Dakota. No problem what so ever. Came back into Montana, again no problems at all.

And as far as conversations. Had a nice chat with both sides of the custom folks. No guns drawn or strip searches resulted. Oh well.

Maybe it was the mini van that saved us.

Yeah. Just walk up to the cops parked out in front of your house and ask them what
frequencies they use. I'm sure they'll tell you.

On Mon, 23 Jun 2003 18:12:23 -0400 (EDT), a person by the name of NobodysLabRat@webtv.net (T. G.) used Web TV to post the following message, not realizing of course that the Web TV itself is actually the surveillance device used to monitor him.

It's too late dude. They already know that you know. Now that they know you know they will jam your counter measures and soon they will know all that you know until they know enough to get a warrant.

Put the stuff in your trunk and take it out to the marshes and bury it. It's the only way to be squeaky clean when they come for you.

Best of Luck......

Simply line your walls with tinfoil to keep the signals out and for good measure make yourself a good tinfoil hat.

I agree, about the time you know there is surveillance, it's much, much to late.

Good luck, and be sure to get back on here when you get out.

OK all... I picked up my first scanner - a RadioShack Pro-95. Appears to have most of the bells and whistles that I can handle right now.

I've been listening for a while and reading some great websites a bit here and there. I'm having trouble identifying all my channels that I have found. Does anyone have a good link or even a list of freqs in the Cincinnati, Ohio area?? Like I said, I've been fairly successful in identifying a handful of freqs, but there are a couple I just can't pinpoint. Any help would be appreciated.

AND - 1000 channels is a bit hard to manage. What's the best frequency management software out there and how can I program this scanner easier than manually pushing the buttons...There has to be a better way!

Thanks guys...(and gals, I'm sure!)

don't forget to line the windows and yes I really heard this once on the scanner, make sure the "shinny" side is facing outward....

Ok, actually did hear that once, police were going to the home of a "wacko" who kept calling 911 saying that UFO's were over his house monitoring his activities. He told 911 that he had lined his windows with tinfoil to block the radar waves. While dispatch was dispatching the call the responding officer asked dispatch if he had the shinny side facing outward.... Laughted my ass off....

To the Group:

Why can't you guys just give me a straightforward answer? As ridiculous as it may have sounded to you, what I told you is the truth. My immediate neighbors are pissed off at me and all belong to a "neighborhood watch" group. Law enforcement is covertly assisting them in trying to get me to respond violently so that I can be arrested. Every day I am being harassed by neighbors deliberately causing interference to the electronics here. It always coincides with their presence. So, please spare me the levity and provide some frequencies where they may be coordinating their surveillance and harassment B.S..

T.G.

>
>Yeah, but is it really that big a deal??

Different features are important to different people.

Many just want to listen to public safety, and they could care less
about any other signals on the air. Features important to me would
not matter to them.

I'll admit, there are things which are interesting to me, which would
not be interesting to very many people. For example, I watch the
local business trunked systems for net increases and net decreases in
the number of fleets. I use this as an indication of which two-way
shops in the area are doing well, and which are not. Most people
wouldn't care.

Since I monitor a wide variety of signals, the more capabilities a
receiver has, the better it suits my needs.

>> Proprietary packs are smaller, making the scanner smaller, and the
>> extra pack easier to carry.
>
>Smaller=Less capacity,

Smaller cells = less capacity. But compare the way the cells are
packed. You'll find a lot of space taken up by plastic in AA holders.

Being compact is more important to me than the convenience of being
able to change individual cells. ymmv.

>> A two-way cable requires more than a couple of parts. Unless you have

Unless you're looking for a unit to perform multiple purposes.

>the GRE built units are usually a better long term choice (My 92 was
>the excepton).

The 92 has lousy receive sensitivity, but with it's signaling decoding capabilities, it was the best general purpose handheld until the 250D came out.

>Besides, the Uniden's are very cheaply made in general compared to the
>GRE radios.

In general I would agree, but the 250D and 780/785 represent a significant improvement in Uniden quality.

>like this to report?

There certainly are people eager to poke their noses into other
people's affairs.

Every time I hear a call on my scanner, dispatching officers on a
report of teenage smokers, or similar types of stupidity, I say to my
scanner, "Why can't people mind their own business?"

A recent newscast told of a local city using volunteers to canvas
neighborhoods, looking for uncut grass, and other petty ordinance
violations.

>Where is the harm in looking for and reporting suspicious activity?

Because it increases the likelyhood that you or I will be cited while
the lawnmower is being repaired, or will be interrupted by a policemen
demanding to know our business as we harmlessly go about our daily
activities.

I have nothing against calling the police when someone needs help, but
I have everything against busybodies eager to catch their neighbors
doing something wrong.

I plan on getting one once our local police (Redding, CA) switches to the APCO 25 digital system. I hope it is not until the Pro-96 is offered though. Hopefully sometime after (as the price may drop a little). Watch www.trunkedradio.net for my input on this scanner for my area (once I get it dialed in to monitor).

I have crossed at the peace arch many times before over the past few years with no troubles but this time was different. The things I am wondering about is why were the police so close to the Canadian side with a road block and what did my radios have to do with anything. You had to go through the search to line up for the Canadian customs check and that is very odd.

That is really a weird claim, and is the reason why I tried to interpret
it in the way that I did. Perhaps you should try to 'understand' the
situation instead of making such a wierd claim? I do fully understand
the extremely biased hate-mongering media, and also fully recognize that
the hate-mongering media is taking further advantage of the populace whose
education about America is mostly based upon Hollywood nonsense. It
would be good to avoid being fearful of a slight amount of American
patriotism. It is the Americans who are the victims of disinformation
that leads to observations like 'not wearing certain T-Shirts might
cause a certain problem.'

The true 'chauvinism' is that which is being perpetrated against the
US by the biased and dishonest media that misleads the non-US public
against the US. The US DEFINITELY has some faults, but a knowledge

base that comes from Hollywood and disgustingly misleading anti-US press (and also anti-centrist/anti-rightwing) isn't really a knowledge base, but is a stupidity base. Using a 'European' viewpoint when interpreting US politics could lead to really wierd conclusions... For example, the often Xenophobic European right-wing has little in common with the majority of the US right-wing (which doesn't tend to be as Xenophobic.)

AGAIN where in Massachusetts is this happening, at least relate the
county your in. Try doing a search with a radio scanner's antennas
disconnected, to see if any local signals are present.
The so called undercover "detectives" may be on low power encrypted
frequencies.
What bands/ frequencies are you experiencing interference on?
If its in the AM broadcast band then wrap a piece of tin foil around an AM
radio,
leaving the ferret bar antenna uncovered. Then walk around (inside) the
house
turning the receiver back and fourth to null out the interference. You may
have to adjust the
foil to get the best results. Try this with the other electronic gear ,if
it's portable
then move it around to see if you can get a heading on where the
interference is
emanating from. Look up the FSR frequencies they may be co-ordinating the
watch group with FRS radios. Another reason to do a frequency search.
by the way do you even have any communications receivers and or radio
scanners?

Why does everyone feel a need to ridicule this guy? If this guy is telling the truth, this wouldn't exactly be the first time cops overreacted to false complaints filed by disgruntled neighbors. In fact, based on the news stories I've read over the years, police acting on false complaints seems to be a fairly common practice.

Likewise, if his story is true, I can certainly understand why he wouldn't want to give his location or get into great detail about what he has seen to make him suspect this activity.

Instead, he came to this newsgroup to ask the "experts" here general questions about what he can do to find out if his suspicions are true (the frequencies they might be using and so on). What he gets instead is nonsense about tinfoil.

Most scanner users claim it is the right of all citizens to monitor their local police. If he is wrong about his suspicions (which most of you certainly seem to believe he is), what harm is done by honestly answering his questions (if for no other reason but to ease his suspicions)?

I don't know anything about the frequencies used by the police in Massachusetts (especially those frequencies used for surveillance). However, there must be someone here that does. Hopefully that person will be a little more helpful.

- Radio Shack's cable/software does NOT work with the pro-95, and there's
only one (AFAIK) software packages that works with the pro-95:

Don Starr's Win95 (which works well, but is only unfortunately,
for software from Satan in Redmond)

you can find cables from a variety of sources... i've used the
blackbag software cable..

While I understand your concerns, you are making a huge jump from reporting possible terrorist communications to lawnmowers. The topic, and agencies, involved have nothing to do with teenage smokers, lawnmowers, uncut grass, or "petty" local ordinances. These are federal government agencies with no interest in that type of stuff.

Further, I find it difficult to make a connection between looking for terrorist activity on the radio to an increase in the likelihood of being cited for a lawnmower or the other things you mentioned. Indeed, the opposite should be true - if they are looking for terrorist activity on the radio, they are not looking for lawnmower violations (a joke, my friend).

Well, I just don't know what to say about your story, WG. As I've said, I've traveled back and forth across the border many times with no problems whatsoever. Why you have had more problems is beyond me.

By the way, what do you photograph? I've been a professional photographer, on the side, for many years. In fact, photography will likely be my main job (major source of income) after I retire. My main interests are split between fashion photography and travel photography (with some experience in almost everything else along the way).

Has anyone had success with programming the R8500 using Windows 2000 via either of the following programs?

Scancat-Gold for Windows
Parness tk8500

Well put and accurate. Another thank you to the 1960s radicals that are now tenured in our institutions of higher learning. Where the students can't read and need a roadmap to find a history class.

Yeah, but my feeling is more radios are always better than one, what it
you drop one and it dies.

Right, but from my 30+ years of scanning, more radios are always better.
I would have killed myself if I had gotten rid of/sold all my old xtal
scanners and tunable PSB radios when the MGM Grand Hotel burned in Las
Vegas about 24 years ago. I had everything out of the closet, turned on
an running all day.

Yeah, the Uniden 4 cell pack does take up a little less room, but it has
the little cable and plug on it, the RS scanners have the clip and it
just slides or sets in.
>
> Being compact is more important to me than the convenience of being
> able to change individual cells. ymmv.

Compact is nice, but usually is a negative on RF performance, or audio,
and usually both.

>
> Unless you're looking for a unit to perform multiple purposes.

Again, two or more are better. I take my Pro93 and my Yaesu Vr500 to
work with me most of the time, If something big breaks, I can sit on one
freq, or a few with the Yaesu, and scan/search with the 93.
>
>

> came out.

It was too bad, some 92's were ok, but slightly deaf, some, like the one
I had could barely follow the local trunk that pegs the VR500's meter on
all the control channels. My friend's was even worse. He had it aligned
at a local shop and it helped, but it was just plain deaf as a rock.
Even worse tham the Icom IC2000 I had a few years ago. Intermod
everywhere, then after Icom did the "intermod fix", it was stone deaf.
I sold it cheap to someone and ended up getting a IC2100, a great radio

that hears better without ANY antenna than the 2000 did with a decent 2meter mobile ant. I use mainly to listen to Rail stuff, and it works much better than any scanner I have used, but the old Regency HX1000 was pretty close.
>
>

>
> In general I would agree, but the 250D and 780/785 represent a
> significant improvement in Uniden quality.

I played with a 250D at the Ft Wayne hamfest and wasn't impressed, and when I recently opened one up just to see what was going on, it seemed like old home week. a little more dense, but still reeking of cheapness. I'm not a fan of the looks of the Pro 96 either, looks Unidenish to me, but if it owrks as well as the 93 or 95, I'm sold.

If someone would take a polycarb case from one of the ham HT's, put Uniden's scan speed and audio output, and either the ham type pack, or AA option, and the GRE features like the 92 had, and have it receive as well as the 93 or 95 with all the Mil bands and mode switching, that would be a killer. They never seem to want to make that radio, the 92 would have been, if the basic RF performance and trunking operation was there, but it failed. It was the most dissapointing scanner I have bought since the BC8500, the worst base (other than some real basic beginners radios) ever IMO. How it even got on the shelves amazes me.

I wound up with radio,antenna,12 volt lighter adapter. belt strap with quick release.Battery seems good.
Is there any value here? I was owed money so it was take the radio or nothing. fyi about $90.00
Are there manuals on line?
I don't need it but I needed money.
Thank you,
John

I have a winradio WR-1550e (external version), which so far I have used as is. I am wondering if the speaker jack can somehow be connected to the input on my computer sound card. Also, what is the data jack used for? The manual does not address either of these.

A few of questions about the Uniden model. Wondering if anyone has any experiences.

1. Does anyone know how long the battery lasts between charges and how fast it degrades over time.

2. How much does a Ni-MH battery cost ?

3. Can you use audio-headphone ear plugs (two ears) and not just a single ear plug headphone ?

4. Where can I buy one. Uniden.com lists a bunch of stores, but none seem to have it on line and I don't remember seeing scanners at bestbuy or circuit city stores; am I wrong ?

5. If you have one, are you happy with it ?

Thanks

John I don't think the IC-M5 is a ham transceiver -- see URL:
http://www.rigpix.com/protrx/icom_icm5.htm
It is described as All international maritime channels + 10 weather channels

Manuals can be found at several vendors:
http://ac6v.com/manuals.htm#vend

The nosy neighbor thinks he's being vigilant. When he drops a dime to report smelling marijuana, or that the old beater car owned by the guy across the street isn't being moved every 72 hours, he thinks he's making a positive contribution to the community.

Now, if you see scanner listening in the same light, then you and I listen to scanners for very different reasons.

As for me, I've never appointed myself to single-handedly save the world. I'm just looking for some entertainment, and to be a little more informed than I would be by just watching the news at ten.

I'm thinking more about when people in the community will do.

The busybody is on the lookout for anything which doesn't seem right
to him. Occasionally he will stumble onto something big, and will
appear on the news being hailed as a hero. Most of the time, however,
his calls will result in police and city ordinance officials issuing
citations for petty offenses to people who aren't causing any real
harm.

Whether we drive slightly faster than 25 MPH thru the neighborhood,
own three dogs in a city which allows a maximum of two, or have some
strange antennas on the car, we've all got something about us which
could pique his suspicion.

Best not to in any way encourage him.

2607. Re: BC250d Questions

Newsgroup: rec.radio.scanner
Date: 2003-06-25 02:24:10 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3EF907CA.10848676@mitre.org>
Source record: 29236

The NiMH Uniden battery pack is supplied with the BC250D. You can also get a after market battery pack form Lee Electronics the BP1600
<http://www.leeselect.com/>
or Metro west.

With the BCi25D digital
card installed and enabled the BC250D will run for about five (5) to six (6) hours
and recharge in fourteen (14) to sixteen (16) hours inside the radio scanner with the
supplied power supply Without the card installed or with the card
disabled, a BC250D may run for eight (8) hours.

My BC 250D/BCi25D failed when trying to run-listen to the
radio with the digital card enabled while charging the battery, on the car power plug. Uniden repaired it in about
three (3) weeks ! I would not recommend trying to listen to the BC250D with the
BCi25D digital card enabled, while charging the battery. If you disable that is "turn off" the digital card then you may be able to listen while recharging. NiMH batteries should last three (3) to five (5) years with the proper charge and discharge cycle.
DO NOT OVER CHARGE the NiMH batteries they are porn to burning out if over

charged!

Here's a site with more information
<http://www.strongsignals.net/index.cgi>
And I got my Uniden BC250D/BCi25D from the "Bargain Bin" at Grove Enterprises:
<http://www.grove-ent.com/>
You can also order from Radio Shack on line.

I'm very happy with the Uniden
BC250D and BCi25D digital card. It took getting used to, adjusting the sound quality of the digital card but it's a one time adjustment. you need a strong signal to get ASTRO voice. If the signal is weak the digital voice becomes garbled or drops out going back to digital noise.
Jim

Because it is impossible to give a straightforward answer without more information from you.

If the county/city/township/village etc. is known, at least checking with the frequencies listed for that area would be a good start. Also there is good reference material out there that lists common surveillance equipment frequencies commonly used.

I also saw your message to Robert (the one with the broken Irony Meter). Obviously, you and I see things very differently. Based on what I've read, you seem to feel it is up to the police, and only the police, to enforce laws - that others should not become involved.

I, on the other hand, see the average citizen, such as my neighbor, as a first line of defense against crime. For example, if someone is trying to break into my home, it is a neighbor who will most likely see it first. At that point, I would hope the neighbor is vigilant enough to report that to the police instead of feeling that doing so is a bad thing (that doing so is "appointing..." himself "...to single-handedly save the world").

In fact, I would hope my neighbor is vigilant enough to report any crime in the neighborhood. If that means I occasionally get a ticket for going a little faster than 25 mph, then it is a darn small price to pay for a safe, relatively crime free, neighborhood.

Sadly, since so many flunked geography (or didn't even take it because so few schools offer it anymore), a road map probably wouldn't help much either.

Actually, John has an excellent point about the impression presented by the media to those outside the United States. Because of crime and violence on television, surely criminals outside the country are convinced America is a criminal's dream come true - a place where false ID is easy to obtain, where criminals can easily set up shop using fake business names, where illegal guns are openly sold on the street, where drugs are sold on just about every street corner, where few people report the criminal activities they see, and where police are perhaps even criminals also.

It does make you wonder why so many really want to move to America.

Yes, I have the same receiver. I have connected the speaker output to the Line input of my sound card and it works very well. It is important to use a standard stereo jack (any standard PC multimedia cable will do nicely).

> Also, what is the
>data jack used for? The manual does not address either of these.

This is FM discriminator output. It is used for receiving data transmissions on FMN. This also connects to the sound card. You can use third party decoding software, or Winradio own software such as the Digital Suite which I have. So you can receive Weather Fax, various FSK modes, pagers, etc.

The US has pockets of problems (mostly in cities that are managed by our
left wing -- which isn't really directly related to party per-se), but the
vast majority of America is quite tame. There is also a problem with
repeated, self-fulfilling victimhood that is damaging industriousness
and personal responsibility.

The pockets of problems in the US are quite different in many ways than
the problems in Europe (and elsewhere.) Interpreting the US with the
disinformation that is spewed by various ersatz-information sources, and
based upon the realities in Europe would lead to insanely incorrect
conclusions.

All too often, even in the US, with US news sources, the information is
overly sensationalized, and the size of various minor disasters and/or
difficulties are too often overblown. When true disasters or horrible
circumstances occur, then there is even a movement to 'manage' public
outrage or response. This tends to compress the public view of the
magnitude of 'news' items. Laci Peterson (for example) seems to get
as much news as the WTC attacks, even though the magnitude of the
individual acts aren't comparable.

Staying ahead of Big Brother is impossible. By very virtue of the fact that Big Brother is 'Big Brother'. If it were not so, he would be known as Little Brother.

Good luck, be sure to get back on here when you get out of the 'Big House'

Judging from how you dumped Don Starr's Win95, I guess you're a Linux user (as I am). I also run Windows ME on my system too. I've already got the cable issue squared away. I just took the data com cable from my old digital camera and swapped out the mini phono plug for a 1/8 inch one, it already has a DB9 plug on the other end because the camera connected to the PC via the serial port as does the PRO-95. Now I'd like to be able to connect the scanner to my PC via USB, that'd be so cool.

BTW: If you are a Linux nut and need radio apps for that O/S, you should give the Hamsoft website a look. http://radio.linux.org.au

whoa! i did NOT dump on Don Starr's Win95... it is an excellent program,
and he is to be commended for his generosity! not only that, but he
responds to queries regarding his project and is quite a gentleman...

i just don't like [read: despise] the host platform and its manufacturer...

:-)

alas, while wine emulation libs can run many of the proprietary apps
for Satan's software, not all will work...

Fight the Man! Right on comrade!

Fill the first bank with any frequency but the bank must be full.

Turn the radio off and disconnect all power internal and external. Leave it like this for at least 24 hours to drain any residual power in the scanner. Reconnect power while keeping the 6 key depressed and power on the radio. Start scanning the first bank, and first bank only. When the radio is scanning over the 6th channel press the 6 key and power off while keeping the 6 key depressed. If you do it at the correctly it will open up the "Federal" side of the radio. Your scanner will receive a programming tone from a local Federal repeater station and will go into AP mode, auto-programming. The display should be blank without power and stay blank until all the channels have been down loaded. This can take up to 6 hours depending upon where you live. When it is complete the display will use it's internal residual power to show three numbers repeated twice. The numbers displayed isn't important except any numbers will signal you were successful. Good luck and enjoy!

Source record: 29156
Cross-posted to: alt.radio.scanner,rec.radio.scanner

After six months of dieting and trimming, PublicGIS is now back online with

- All 276,576 radio transmitters across Canada, as of Jun 2, 2003.
- new ways to search (use postal code, populated place name, ZIP code or latitude / longitude)
- new interface: simpler to use
- more flexible: interface is customizable via user preferences
- more interactive: register an account to download waypoints
- more accepting: submit your waypoints.

PublicGIS.com is a place where all things with a location have found a home. These things are also known as waypoints, and are organized into themes, such as Post Offices, FM Radio Transmitters, the common Scenery Photograph URL,
etc.

As a visitor, you are welcome to freely search and explore waypoints from these and other themes. As a member, you can also submit new waypoints to specific themes,
receive search results via email, search larger areas, etc.

Recenty updated or new additions to the database include:

a.. (Jun 24) US Geological Survey Gazetter (USGS GNIS)
b.. (Jun 23) NIMA Foreign Names
c.. (Jun 10) Canadian Business Directory
d.. (Jun 2) Canadian Technical and Administrative Radio Frequency Lists (TAFL)

Sincerely,

Why not dispense with the wine emu and do the dual-boot thing so you can run Starr's Win95 natively. Even with all these Linux radio apps coming out of the woodwork, Windows is still the best O/S for radio hobbies.

That's the problem. There are so many people that they "can't" sit inside waiting for a table. We are not talking take out here, we are talking about people waiting to be seated for dinner.

These things are ubiquitous these days.

Regards.

>laws - that others should not become involved.

Actually that's not my point at all. It is the role of the public to
call the police when appropriate. If your neighbor sees someone
breaking into your house, he would be derelict if he did not report
what is obviously a crime in progress.

My problem is with those who are anxious to catch someone doing
something wrong. With those who obsessed with rule violations, rather
than only getting upset over situations where real harm is being done.
With those who pick up the phone simply because something simply
doesn't feel right to them.

These people take legitimate civic responsibility too far. They take
a good thing and make it into a bad thing.

If your neighbor is responsible for a burglar being apprehended, good
for him. He's doing what he should. But if he's calling the city to
complain that people are not keeping up their yards like they should,
or it he's videotaping a house because he has heard that the teenagers
in the family have been in trouble with the law, he's a nuisance and a
detriment to the neighborhood.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

>Dave

You're stuck with the classic problem associated with wideband scanner receivers...the trade off between sensitivity versus potential intermodulation and / or overload, compared with a receiver tailored for a specific narrow frequency band.

Simply adding an antenna cut for 144-148 megs will more than likely give the outcome some edge over the usual supplied antenna (unless it just happens to resonate around 2 meters) . But if you have strong signals adjacent to this band (pagers for instance), the 2 metre antenna will prove to be a two edged sword and you stand to finish up being swamped with pager overload anyway, depending on your location.

The only real solution is an outboard band-pass filter with sharp cutoff outside the band of interest. This puts you into the realm of helical resonator and tuned cavity filters.

Some scanner receivers don't even cut the mustard when the supplied rubber ducky antenna is replaced with a simple outdoor antenna.

Source record: 29179

When turned off my vr 500 (unlocked european version) it drains battery a lot. When I look at the display I see it is a little dark but if I plug the recharge jack or take off battery the display appears to be clear.

Another question: My device only displays "low battery" when is too late and the radio cycle On and Off until it is full discharged.

I also noticed that performance decrease when the battery is under half charge.

I wish to know if my unit is defective or all vr500 work the same

I don't know if I can agree with that, especially when looking at this from a foreigner's perspective. While it is certainly true crime is far lower outside the larger cities, the rest of America is hardly tame. For example, I live in a small town (population about 15,000). There have been 41 murders in the last ten years, which is more than ten times the number of murders in Heidelberg Germany during that same period - Heidelberg is a town about ten times larger than this town.

I couldn't find a European town that even came close to matching the number of murders in this town during that period (Heidelberg was picked as an example above simply because I once lived there). Sadly, I found plenty of small towns across America that far exceeded the crime numbers of similar size towns in Europe.

With that in mind, while we may look tame compared to those living in some very violent countries in the Middle East, Africa, and so on, America probably looks totally out of control to those from much more tame countries (and that includes America's smaller towns).

However, I do agree with your overall comments about the media's role in hyping the problems here.

- the benefits of not using Windows far outweigh any perceived advantages

- fortunately, VMware may be used to run the software in a Petri-dish
environment (which will limit any potential damage)...

Hi All,
Does anyone know anything about switching off the ctcss tones
on this set?

i have found the excellent www.superiorsignals.co.uk which shows how
to manually move the 8 446 channels and also change the ctcss tones
but the 446 set my family use don't have the ctcss facility on it.

so they hear me but i only hear them if i keep the monitor button
pressed.

can i switch off the ctcss facility off on the kenwood?

thanks...scanman

I use the software from Butel. Not freeware, it's $30, but it works very
well.

Have you tried setting it to CTCSS tone Zero ?

Otherwise it could be like the old Motorola T200,
you can't switch off the CTCSS

Once in a long while, I do check my email - but NEVER CHECKED should
be a big hint.

Anyway, someone sent:

"RF carriers other than the one with the control-channel slot on it will
not be radiating untill the capacity (extra slots) is needed."

Why then, in the TETRA area I visited recently, are there 2 or 3
carriers radiating from each site?

A complementary source for Canada-wide radio frequencies is PublicGIS.com.

In particular, look at the theme "Canadian Spectrum Direct", which lists all 276,576 public and private radio transmitters across Canada, as of Jun 2, 2003.

It offers flexible searching capabilities so that you can restrict your search.

1. to a particular area (Populated place, postal code)
2. within a particular distance
3. within a range of frequencies
4. limited to a specific transmission mode (eg. AM)
etc.

If you register, you also get to download the search results, which you can upload into your GPS, Streets & Trips, etc.

Cheers

Kevin

Just when you thought conservatives couldn't get any dumber, here comes Louis Zizza.

Mr. Zizza attacked Pamela Anderson on a flight from Florida to California last week because he mistakenly assumed that she was one of those rotten anti-war celebrities that Bill O'Reilly, Rush Limbaugh and Sean Hannity have presumably filled him with hate for.

Apparently drunk (although he claims he was sober) Zizza spied the celebrity, his braincell lit up, and he let loose the abuse.

He was not arrested, but he later apologized for the mistake and claimed that he thought Anderson was "someone else."

That Don Rumsfeld - he just can't help putting his foot in it, can he?

Last week, while trying to mount a defense of the "success" we're having in Iraq, he suggested that the homicide rate in Baghdad is lower than that in Washington, DC.

"You got to remember that if Washington, D.C., were the size of Baghdad, we would be having something like 215 murders a month," Rumsfeld said.

"There's going to be violence in a big city."

What on earth is that supposed to prove?

Oh, I see... so all those deaths in Baghdad have got nothing to do with the suppression of protests, rocket attacks, suicide bombings, radiation poisoning from unsecured nuclear power plants... etc, etc.

They're just normal, everyday crimes that you would find being committed in any major city around the world.

Don, you're nuts.

Just let me know the next time you see a roving bunch of rogue lobbyists driving down K Street blowing stuff up with rocket propelled grenades and AK-47s.

The White House has "removed sections of a report by the US Government's own environmental agency to water down references to global warming" according to BBC News, which pretty much shows

a) how much of a priority the environment is for this administration, and

b) how much of a damn the White House gives about telling lies these days.

Apparently Bush's team wanted to add so many amendments to the section on global warming that it "no longer accurately represents scientific consensus on climate change", according to an EPA memo.

Yup, this seems to fit the administration's M.O. all right - if you don't like the facts, either change them or get rid of them altogether.

Denial and Deception

By PAUL KRUGMAN

Politics is full of ironies.

On the White House Web site, George W. Bush's speech from Oct. 7, 2002 -- in which he made the case for war with Iraq -- bears the headline "Denial and Deception."

Indeed.

There is no longer any serious doubt that Bush administration officials deceived us into war.

The key question now is why so many influential people are in denial, unwilling to admit the obvious.

About the deception:

Leaks from professional intelligence analysts, who are furious over the way their work was abused, have given us a far more complete picture of how America went to war.

Thanks to reporting by my colleague Nicholas Kristof, other reports in The New York Times and The Washington Post, and a magisterial article by John Judis and Spencer Ackerman in The New Republic, we now know that top officials, including Mr. Bush, sought to convey an impression about the Iraqi threat that was not supported by actual intelligence reports.

In particular, there was never any evidence linking Saddam Hussein to Al Qaeda; yet administration officials repeatedly suggested the existence of a link.

Supposed evidence of an active Iraqi nuclear program was thoroughly debunked by the administration's own experts; yet administration officials continued to cite that evidence and warn of Iraq's nuclear threat.

And yet the political and media establishment is in denial, finding excuses for the administration's efforts to mislead both Congress and the public.

For example, some commentators have suggested that Mr. Bush should be let off the hook as long as there is some interpretation of his prewar statements that is technically true.

Really?

We're not talking about a business dispute that hinges on the fine print of the contract; we're talking about the most solemn decision a nation can make.

If Mr. Bush's speeches gave the nation a misleading impression about the case for war, close textual analysis showing that he didn't literally say what he seemed to be saying is no excuse.

On the contrary, it suggests that he knew that his case couldn't stand close scrutiny.

Consider, for example, what Mr. Bush said in his "denial and deception" speech about the supposed Saddam-Osama link: that there were "high-level contacts that go back a decade."

In fact, intelligence agencies knew of tentative contacts between Saddam and an infant Al Qaeda in the early 1990's, but found no good evidence of a continuing relationship.

So Mr. Bush made what sounded like an assertion of an ongoing relationship between Iraq and Al Qaeda, but phrased it cagily -- suggesting that he or his speechwriter knew full well that his case was shaky.

Other commentators suggest that Mr. Bush may have sincerely believed, despite the lack of evidence, that Saddam was working with Osama and developing nuclear weapons.

Actually, that's unlikely: why did he use such evasive wording if he didn't know that he was improving on the truth?

In any case, however, somebody was at fault.

If top administration officials somehow failed to apprise Mr. Bush of intelligence reports refuting key pieces of his case against Iraq, they weren't doing their jobs.

And Mr. Bush should be the first person to demand their resignations.

So why are so many people making excuses for Mr. Bush and his officials?

Part of the answer, of course, is raw partisanship.

One important difference between our current scandal and the Watergate affair is that it's almost impossible now to imagine a Republican senator asking, "What did the president know, and when did he know it?"

But even people who aren't partisan Republicans shy away from confronting the administration's dishonest case for war, because they don't want to face the implications.

After all, suppose that a politician -- or a journalist -- admits to himself that Mr. Bush bamboozled the nation into war.

Well, launching a war on false pretenses is, to say the least, a breach of trust.

So if you admit to yourself that such a thing happened, you have a moral obligation to demand accountability -- and to do so in the face not only of a powerful, ruthless political machine but in the face of a country not yet ready to believe that its leaders have exploited 9/11 for political gain.

It's a scary prospect.

Yet if we can't find people willing to take the risk -- to face the truth and act on it -- what will happen to our democracy?

At the time of writing, 54 U.S. soldiers have been killed in Iraq since George W. Bush declared Mission Accomplished on May 1.

And now the White House is starting to worry.

Oh, they're not worried for the dead soldiers or their families - that's a "necessary cost" for the money that Halliburton is going to make off of this invasion thing.

I mean, it's a necessary cost to find Saddam's deadly weapons of mass destruction.

I mean, it's a necessary cost to provide democracy, freedom and excellent healthcare to the Iraqi people.

Or whatever the excuse is this week.

No, the White House is starting to worry that the political fallout of all these dead Americans may not be in their favor.

Because while men and women of the armed forces swelter in 130 degree heat, being shot at by angry Iraqis and not knowing when they'll come home or even what they're supposed to be doing, Our Great Leader is swanning around the USA holding $2000-a-ticket fundraisers in an attempt to raise $200 million dollars for his election campaign.

The fact that he's doing this under the guise of some great flag-waving military leader - while soldiers come home in body bags from Iraq almost daily - is particularly sickening.

They've served his purpose, and now their corpses can be swept aside while he campaigns.

So much for "supporting the troops."

Guess who's getting a slice of Iraqi pie? The fraud king, WorldCom

by Molly Ivins
Creators Syndicate

AUSTIN, Texas --

My, my, my, the great Iraqi Gold Rush is on, and who should be there at the front of the line, right along with Halliburton and Bechtel, but our old friends at WorldCom, perpetrator of the largest accounting fraud in American history.

WorldCom, shortly to become MCI, has been given a contract worth $45 million in the short term to build a wireless phone network in Iraq.

I learned via The Associated Press (AP) that Washington Technology, a trade newspaper that follows computing-related sales to the U.S. government, "found WorldCom jumped to eighth among all federal technology contractors in 2002, with $772 million in government sales."

And that is only counting the deals in which WorldCom is the primary contractor.

It is actually getting much more as a subcontractor.

The Securities and Exchange Commission recently reached a settlement with WorldCom, fining the company $500 million for its $11 billion defrauding of investors.

The company did not have to admit any guilt.

"The $500 million is in a sense laundered by the taxpayers," Tom Schatz, president of Citizens Against Government Waste, told AP.

WorldCom got the Iraq contract without competitive bidding, to the anger of rival companies A&T, Sprint, etc., which actually have experience in building wireless networks, according to AP.

A WorldCom spokesman "also stressed the company's deep, overall relationship with the U.S. military and government."

Among those continuing to make a good thing out of the Iraqi war is Richard Perle of the Pentagon's Defense Policy Board.

According to the Los Angeles Times, last February, Perle and the board received a classified briefing on the potential for conflict in Iraq and North Korea, including information on new communications networks.

"Three weeks later, the then-chairman of the board, Richard N. Perle, offered a briefing of his own at an investment seminar on ways to profit from possible conflicts with both countries," wrote reporters Ken Silverstein and Chuck Neubauer.

It's a subject on which Perle is fully qualified.

He was forced to resign as the Policy Board's chairman (though he did not resign from the board itself) in late March after it was learned he had been employed as a consultant by Global Crossing Ltd., then trying to get Pentagon clearance to sell itself to an Asian concern.

Perle also serves on the board of several defense contractors and is co-founder of Trireme Partners, a venture capital firm that invests in the defense and homeland security industries.

Also according to Silverstein and Neubauer, Perle's partner at Trireme, Gerald Hillman, has been put on the Defense Advisory Board, despite having no background in national security or defense.

One has to scramble to keep up with the Gold Rush and its players.

Tim Shorrock has an excellent article in the June 23 issue of The Nation detailing the state of play:

Hundreds of major corporations are interested in getting a piece of this pie.

Meanwhile, the invaluable Rep. Henry Waxman of California is keeping an eye on Halliburton.

He is raising questions about the company's ties to countries that sponsor terrorism, specifically Iraq, Iran and Libya.

As President Bush begins his two-week, $20 million "shock and awe" campaign fund-raising sprint, we will naturally be keeping an eye on the connections between the campaign contributions and government contracts.

And if you think that's too cynical, boy, have you not been paying attention.

One of the many horrors Shorrock found was a statement by Martin Hoffman, former secretary of the Army and close adviser to Donald Rumsfeld, on the privatization of Iraq.

He told Shorrock his strategy is like that of the strategic hamlets program in Vietnam.

"That was basic economic development," Hoffman said.

Ooops.

The only problem is that the strategic hamlet program was a colossal failure, producing untold damage, chaos and hatred.

It was a key reason we lost that war.

Another player with business interests in all this is Paul Bremer, the American viceroy in Iraq.

Bremer's company is Crisis Consulting Practice, set up after 9-11 to advise multinationals on how to handle terrorism.

Naomi Klein concludes in The Nation:

"Many have pointed out that Bremer is no expert on Iraqi politics. But that was never the point. He is an expert at profiting from the war on terror and at helping U.S. multinationals make money in far-off places where they are unpopular and unwelcome. In other words, he's the perfect man for the job."

Other efforts to abruptly introduce a capitalist economy into a state-run system have had awful results.

The "shock therapy" applied to Russia after the Soviet Union broke up almost destroyed the country, and it still hasn't recovered. Argentina went through a similar process.

So where's a president like Franklin D. Roosevelt when we need him?

"I don't want to see a single war millionaire created in the United States as a result of this world disaster," he said during World War II.

2673. 'Saddam' strike shows Bush desperation

Newsgroup: rec.radio.scanner
Date: 2003-06-26 21:14:57 UTC
From: Stagger Lee <Slee@houston-hunks.com>

The reported convoy attack shows that the United States is becoming increasingly desperate, and determined, in its search for Saddam Hussein.

It badly needs a success right now.

American soldiers are being killed.

No weapons of mass destruction have been found.

Iraq is recovering only slowly.

Convincing the world that Saddam was dead would require describing in detail how those samples were acquired and how the matching DNA was examined

Hence the risk the Americans were willing to take.

The intelligence linking Saddam and Uday and Qusay Hussein to the convoy is thought to have been based on a monitored satellite telephone call.

The possibility of killing totally innocent people must have been taken into account.

The prize of getting Saddam Hussein or one of his once powerful sons, it seems, was worth the price others might pay.

A DNA investigation of human remains is said to be under way.

The relevant article of international law is Protocol 1 Additional to the Geneva Convention 1977.

Article 51 says:

"The civilian population shall not be the subject of attack."

Article 57 deals with the precautions which have to be taken.

The attackers "should do everything feasible to verify that the objectives to be attacked are neither civilians nor civilian objects."

The United States has not ratified the additional protocol, but Mr Cordone said that international law regarded the protocol as binding in the custom and conduct of war.

The unit in charge of the search for Saddam, Task Force 20, is said to have DNA samples of a number of former Iraqi leaders.

Establishing the identity of their bodies would not be difficult in that case.

But convincing the world that Saddam was dead would require describing in detail how those samples were acquired and how the matching DNA was examined.

The legacy of doubt left by the intelligence failure on the WMD issue would have to be overcome.

King Abdullah of Jordan compared the sightings of Saddam, who may or may not be dead, to those of someone who is:

"It's like Elvis," he told ABC television.

"You're getting so many stories, left, right and centre."

'Saddam' strike shows US desperation

By Paul Reynolds
BBC News Online world affairs correspondent

The reported American attack on a convoy thought to be carrying Saddam Hussein and/or his sons last week would have been legal only if there was substantial evidence indicating their presence, according to Amnesty International.

But if there had just been a hope and there was the risk of killing innocent civilians instead, then it would not be justified, said Amnesty International's Legal Director Claudio Cordone.

An Iraqi 'quackmire' in the making

By Jim Lobe

WASHINGTON -

"We know where they are," Pentagon chief Donald Rumsfeld assured television interviewers about the location of weapons of mass destruction (WMD) March 30, two weeks into the war in Iraq.

"They are in the area around Tikrit and Baghdad."

"I really do believe we will be greeted as liberators," Vice President Dick Cheney declared on television just as US troops massed along the border between Kuwait and Iraq on the eve of the war.

"Wildly off the mark," declared Rumsfeld's deputy, Paul Wolfowitz, when asked by senators just before the war whether then army chief of staff Eric Shinseki's estimate that more than 200,000 troops would be needed as an occupation force after hostilities was reasonable.

"I believe it is definitely more likely than not that some degree of common knowledge between [al-Qaeda and Iraq] was involved [in the September 11, 2001, attacks]", former Central Intelligence Agency (CIA) chief and member of Rumsfeld's Defense Policy Board James Woolsey testified before a federal court just before the war.

Now, more than two months after US troops established control over the area around Tikrit and Baghdad, not only have no WMD been discovered, but evidence of ties between Iraq and al-Qaeda, let alone Iraqi knowledge or complicity in the September 11 attacks, is simply non-existent.

If that were not embarrassing enough, Washington still has about 150,000 troops in Iraq - twice the number projected before the war - and is desperately seeking as many as 30,000 more troops from its "coalition" partners, all expenses to be paid by the US taxpayer.

That such a number may not be nearly enough was underscored this weekend when unknown persons in a remote desert area blew up a key oil pipeline that supplies Baghdad power plants.

The "Q" word - for quagmire - has also made it back into mainstream-media discourse as the impression grows that US troops may be facing a guerrilla war, rather than isolated "pockets or

resistance" of die-hard Ba'athists.

Some officers on the ground have complained before television cameras that they are far too thinly spread to impose order over such a large country, particularly when it appears that, at least in some parts at least, the natives do not particularly appreciate the presence of US troops, and a well-armed and tenacious few are trying to kill them.

What's more, they are succeeding, and at an accelerating rate; in the past couple of weeks - that is, six weeks after Bush declared the war won, they have killed an average of about one US soldier every two days and wounded several more.

"Facing daily assaults from a well-armed resistance, US troops in volatile central Iraq say they are growing frustrated and disillusioned with their role as postwar peacekeepers," was the way the Washington Post reported it.

"The war is supposed to be over, but every day we hear of another soldier getting killed," a US sergeant told the Post.

"Saddam [Hussein] isn't in power anymore. The locals want us to leave. Why are we still here"?

"The army is getting bogged down in a morale-numbing fourth generation war in Iraq that is now taking on some appearances of the Palestinian intifada," noted one recent comment on an all-military website, Defense and the National Interest, while another on the same site predicted that the Pentagon's plans for rotating new units into occupation duty could well "melt down" the army's personnel system within the year.

And then there was this little-noticed headline that appeared in USA Today based on a Senate hearing in which Wolfowitz had testified, "US troops may be in Iraq for 10 Years: defense officials reportedly seek up to $54 billion a year."

Wolfowitz, who before the war had ridiculed Shinseki's estimates, now agreed that a US withdrawal was not in prospect.

Indeed, he suggested, permanent bases may have to be built to house them, a notion that cannot be expected to go down well, even with US-backed exiles, like Ahmed Chalabi, who spent much of the past two weeks back in the US complaining vehemently about how the US occupation authorities are, essentially, blowing it.

Meanwhile, a prestigious joint task force of the Council on Foreign Relations and the Asia Society released a report suggesting that if the United States did not sharply increase its commitment to peacekeeping and reconstruction in Afghanistan, the country could quickly collapse back into the chaos that resulted in the rise of the Taliban.

The question that comes to mind is, what is going on?

Until now, most foreign policy analysts in the US - if not the regional specialists - have been inclined to give Washington's hawks the benefit of the doubt about whether their basic assumptions about Iraq corresponded to any tangible reality on the ground.

After all, no one has ever accused Cheney, Rumsfeld, Wolfowitz or Woolsey of being stupid.

So how could they have gotten the nation into this position?

One probability is that they, like many policymakers, tend to believe the own propaganda which they and their supporters have been spouting since even before the dust of the World Trade Center towers settled over Lower Manhattan.

The degree to which they themselves helped twist the intelligence about Iraq has become increasingly clear over the past few weeks as angry intelligence professionals have taken their complaints to the press.

Hints of a second, not unrelated reason may be found in recent, plain-speaking comments on the enormous budget deficits the administration is running up, even as it continues its drive to cut taxes.

"The lunatics are now in charge of the asylum," declared the Financial Times last month in an editorial seconded by New York Times columnist and Harvard economist Paul Krugman about George W Bush's fiscal policy.

They argued that administration ideologues were creating, apparently deliberately, a fiscal crisis in order to achieve their goal of doing away with a social and economic system that ensured domestic tranquility since the New Deal.

"The people now running America aren't conservatives: they're radicals," wrote Krugman.

"How can this be happening? Most people, even most liberals, are complacent. They don't realize how dire the fiscal outlook really is, and they don't read what the ideologues write."

The same may now be said about the Iraq hawks.

Despite the radical trajectory on which they have taken US foreign policy since September 11, the complacency, especially among Democrats, has been truly remarkable, and much of the "opposition" still isn't reading, or at least absorbing, what the foreign policy ideologues behind Rumsfeld, Cheney and Wolfowitz write or say, for that matter.

"This fourth World War, I think, will last considerably longer than either World Wars I or II did for us," Woolsey said in the third week of the war, as Rumsfeld was locating the WMD between Baghdad and Tikrit.

"As we move toward a new Middle East over the years, and, I think, over the decades to come ... we will make a lot of people very nervous."

2675. Burned Iraqi Children Said Turned Away

Burned Iraqi Children Said Turned Away

By DONNA ABU-NASR
Associated Press Writer

June 23, 2003, 3:45 PM EDT

BALAD, Iraq --

On a scorching afternoon, while on duty at an Army airfield, Sgt. David J. Borell was approached by an Iraqi who pleaded for help for his three children, burned when they set fire to a bag containing explosive powder left over from war in Iraq.

Borell immediately called for assistance.

But the two Army doctors who arrived about an hour later refused to help the children because their injuries were not life-threatening and had not been inflicted by U.S. troops.

Now the two girls and a boy are covered with scabs and the boy cannot use his right leg.

And Borell is shattered.

"I have never seen in almost 14 years of Army experience anything that callous," said Borell, who recounted the June 13 incident to The Associated Press.

A U.S. military spokesman said the children's condition did not fall into a category that requires Army physicians to treat them -- and that there was no inappropriate response on the part of the doctors.

The incident comes at a time when U.S. troops are trying to win the confidence of Iraqis, an undertaking that has been overwhelmed by the need to protect themselves against attacks.

Boosting security has led to suspicion in encounters between Iraqis and Americans.

There are increased pat-downs, raids on homes and arrests in which U.S. troops force people to the ground at gunpoint -- measures the Iraqis believe are meant to humiliate them.

In addition, Iraqis maintain the Americans have not lived up to their promises to improve security and living conditions, and incidents like the turning away of the children only reinforce the belief that Americans are in Iraq only for their own interests.

For Borell, who has been in Iraq since April 17, what happened with the injured children has made him question what it means to be an American soldier.

"What would it have cost us to treat these children? A few dollars perhaps. Some investment of time and resources," said Borell, 30, of Toledo, Ohio.

"I cannot imagine the heartlessness required to look into the eyes of a child in horrid pain and suffering and, with medical resources only a brief trip up the road, ignore their plight as though they are insignificant," he added.

Maj. David Accetta, public affairs officer with the 3rd Corps Support Command, said the children's condition did not fall into a category that requires Army doctors to care for them.

Only patients with conditions threatening life, limb or eyesight and not resulting from a chronic illness are considered for treatment.

"Our goal is for the Iraqis to use their own existing infrastructure and become self-sufficient, not dependent on U.S. forces for medical care," Accetta said in an e-mail to AP.

The incident came to light after an AP photographer took a picture of Borell being comforted by a colleague after the doctors refused to care for the children.

When Borell's wife, Rachelle Douglas-Borell, saw the photo, she contacted AP with a copy of a letter he sent her describing what happened.

When Borell talks about the children, he pauses between sentences, keeps his head down, clears his throat.

Seated on a cot in a bare room at an Army air base in Balad, 55 miles northwest of Baghdad, Borell said when he saw the three children, especially the girls, Ahlam, 11, and Budur, 10, he visualized his daughters, Ashley, 8, and Brianna, 5.

Borell, who spoke to the family through an Iraqi bystander with some English, did not understand exactly what happened to the children.

But the children's father, Falah Mutlaq, told AP they set fire to a bag of explosives they found on a street in their village, Bihishmeh, a few miles from the base.

Mutlaq, 36, who has 14 children from two wives, said he took the children to a hospital in Balad, but they were turned away because the facility could not treat them.

He then took them to the base.

Borell's eyes cloud with pain when he describes the children.

Madeeha Mutlaq was holding her son, Haidar, 10, fanning him with a piece of cardboard.

His legs, arms and half of his face were singed. Ahlam, Haidar's full sister, and Budur, his half-sister, had fewer but still extensive burns.

What struck Borell was the children's silence.

"They did not utter a single sound," he said.

Borell radioed his superiors, who contacted the base hospital.

Two Army doctors, both of them majors, responded.

One of them, according to Borell, "looked at (Haidar) ... didn't examine him, didn't ask him questions."

"(He) never looked at the girls," said Borell.

"Through the interpreter, one of the doctors told the father that we didn't have any medicine here ... and were not able to provide them care," said Borell.

"And he also expounded on the fact that they needed long-term care."

Borell said the combat hospital was fully stocked.

"Right before they left, I looked at the one doctor, asked him if he could at least give them comfort care," said Borell.

"He told me they were not here to be the treatment center for Iraq."

"He didn't show any compassion," the sergeant added.

Borell grabbed his first-aid kit and gave the father some bandages and IV solution to clean the wounds.

Mutlaq, who grows oranges and apples with water he gets from the Tigris River, laughed when he recalled the doctor's words.

"He lied," Mutlaq said.

"The world's greatest power going to war without burn medicine? Who can believe that?"

Mutlaq took the children the next day to Baghdad for treatment.

Budur, a chubby, giggly child with light brown eyes, seems to have recovered except for a large scab on her right arm.

Ahlam and Haidar are covered with yellowish scabs scattered over raw red flesh.

Haidar keeps his left fingers bent and hops on his left leg because it's too painful to use the right one.

A smile rarely leaves his face despite the discomfort.

Mutlaq said he often hears the children whimper at night from the pain.

Despite their suffering, Mutlaq said he feels no bitterness.

"How can I not love the Americans? They helped me with a flat tire the other day," he said.

Borell said he felt betrayed by the Army, which he joined after high school.

Besides the letter to his wife, he also wrote to his congresswoman and several media outlets describing the incident.

His superiors have not said a word, said Borell, "although I get the impression that they're probably not very happy."

Borell's wife gave him a silver bracelet that says: "Duty, Honor, Country."

He wears it to remind him why he's in Iraq.

"After today, I wonder if I will still be able to carry the title 'soldier' with any pride at all," said Borell.

U.S. forces shoot Syrian border guards in assault on suspected Iraqi fugitives

PAULINE JELINEK, Associated Press Writer

Monday, June 23, 2003

WASHINGTON (AP) --

U.S. special forces shot several Syrian border guards during a firefight that broke out as the Americans chased a convoy of suspected Iraqi fugitives.

An undisclosed number of people were killed, wounded or captured in the attack against the convoy and the resulting border shootout in far western Iraq, Pentagon officials said Monday.

A senior defense official, speaking on condition of anonymity, said five Syrians were injured, three of whom were treated by U.S. forces.

The official would not say on which side of the Iraq-Syria border the clash occurred.

He said it did not appear that any Syrians were killed.

Officials released few details about the incident, which happened Wednesday.

State Department spokesmen did not return telephone queries asking when casualties among the border guards would be returned to Syria and what its effect on U.S.-Syrian relations was likely to be.

Working partly on information from previously captured Iraqis, special operations soldiers attacked the convoy to stop what they believed were high-level fugitives linked to the fallen Iraqi government of President Saddam Hussein, defense officials said.

About 20 people in the convoy were apprehended by the American troops, and most were released after it was determined they did not pose a threat, the senior defense official said.

The official would not disclose nationalities, but he said they were pursued as part of the U.S.-led coalition's effort to "seek out former regime members and leadership."

The official said "routine DNA testing will be done, if appropriate, based on all intelligence gathered."

He said a site exploitation team would attempt to collect remains of the dead.

He did not know the number killed and would not say how many vehicles were in the convoy.

It was unclear whether human remains had been found as of Monday.

Also unclear who shot first in the exchange of fire with the Syrian border guards or the sequence of other events that led to the shooting.

Asked at an afternoon State Department news conference whether diplomats at the U.S. Embassy in Damascus were working to send back the Syrians, department spokesman Philip T. Reeker referred the question to the Defense Department.

The senior defense official said he knew of no U.S. government contact with Syria on the issue.

Intelligence that prompted the attack indicated the convoy included a number of higher-level Iraqis, although not necessarily Saddam, other officials said.

There was no reason to believe that Saddam was among in the convoy, they said.

The special "Task Force 20" commando team was aided in the attack by fire laid down by an AC-130 gunship and other air support, one official said.

The convoy was traveling a known smuggling route near the city of Qaim.

It was unclear whether smugglers were among casualties and how many Iraqis might have been captured or killed.

U.S.-Syrian relations already had been strained over events in Iraq.

Welcome to the Yaesu VR-500. A fine radio, but the low battery indicator is a joke. Seconds before the radio dies the low battery indicator is posted. I turn my radio off when the low battery symbol is indicated, and the radio turns itself on again. I usually go through several cycles of this before I get it to stay off.

I don't believe that the rechargeable batteries perform as well as non-rechargeable Alkaline batteries, have you tried these?

I haven't noticed the display problem, can't help you there.

Did you do the NAM mode (narrow AM). I did, and it worked.

http://www.mods.dk/mods.php3?radio=yaesu&model=vr-500&selectid=2593#2593

Are you using the Battery Save feature? Options to suppress the display light when feasible can help extend battery life too.

http://www.transmission1.net/scanning/review-yaesu_vr500.html

Regards.

I'm betting that's just what it is... a BNC-type connector with the
little locking bits knocked off.

Pro-51 in excellent condition. With manual, antenna and 9 volt wall wart.
Also has discriminator tap. 08/96 date code, not modifiable for cell. I'll
also include a new set of NiMH rechargable batteries.

$85 shipped to USA only.

Thanks,
Jon

Well, I can't tell from the photo (not clear enough) but a BNC
with no 'tits' sometimes has a few threads near the chassis end
of it and is known as a TNC. Or a 'Threaded' BNC. Not necessarily
an 'aviation connector' though. This photo looks strange though,
as if the lugs had been 'clipped' off.

Hello group. I have a BC560xlt that is about 6 years old. When I turn power to scanner off, then turn it back on, there is an "L" on the display and all my 16 memory channels are gone. This just started to happen today. I opened radio case and looked for a lithium battery or a capacitor that maybe stores the memory info, but i found nothing. Does anyone know what the "L" in the display means? I can re program the freqs back in but its a pain in the neck. Is the scanner dead or on its way? Please help bob

The Supreme Court does not opt to delay an execution unless they have good
reason to believe that something was definately amiss (e.g. that the
convicted party may be not guilty)...

> > This term, he submitted a brief in favor of a Texas law that makes gay

According to what I saw on most every major news outlet, both conservative
and liberal, the general public does not agree with your statement, and that
attitudes toward gays have loosened considerably over the past decade or so.

> non-rechargeable Alkaline batteries, have you tried these?

Yes, I think is better to use non recharchable batt but the "low
Battery" apperars only too late
>
> I haven't noticed the display problem, can't help you there.

This is not a problem: when the is radio off look at the display
slighty by side and put off a battery or plug in a jack in the power
connector, you'll see the display became lighter. These means that the
display drain battery also when not in use.

Didn't know anything about William Pryor before reading the New York Times editorial. However, if that editorial is correct, he sounds like the perfect candidate for the Supreme Court. The Supreme Court is supposed to represent all the people, including the far right. Perhaps it is time for a candidate to represent that group, just like the other partisan groups represented by members of that court.

You say Pryor is against abortion, women's rights, gay rights and civil rights. He, on the other hand, might argue that those rights have to be better balanced against the rights of others (unborn children, men, non-gays, and non-minorities).

What the hell is that supposed to mean. There is no correlation. If we bring the troops home, and presumably they all don't go to Washington to live, we would have cut unnecessary deaths. We're supposed to be solaced by the thought that even though we're needlessly loosing our young men in Iraq, it's ok because more people are murdered in Washington every year?

And the Saddam is not in power stuff. If Saddam kills Iraqis and the U.S. kills Iraqis, do you think that the families of the dead say that even though they lost members of their family, it's ok since the U.S. killed them.

If our house to house searches keep up the way they are in Iraq, the Iraqis will soon think that they were better off with Saddam.

Can you spell OIL. That's mainly what we wanted, and strategic advantage. It certainly wasn't about WMD or Freedom. We are becoming oppressors.

Regards.

Of course attitudes toward gays have loosened considerably. After all, anyone opposed to the so-called "gay rights" is heavily censored and even ridiculed by the media. Instead, the American public is shown only one side of this issue (happy gays on television sit-coms or gays in "love"). That same media never shows homosexual men engaging in unsafe sex with strangers in public parks and nightclubs or sexually abusing children (unless it is gay priests in the Catholic Church - the media hates the Catholic Church more than it likes gays, but even then focuses more an the church than the outrageous behavior of those priests).

Althought the "Attitudes" may have loosened, so have the morals.

Gays are given Carte Blanche by the media in terms of the failure of the media to report some of the most egregious behaviors. I have seen, on conservative shows, news articles of men in bras and panties marching in local parades. These were parades that the gays sued for admission to, parades designed to celebrate some community events, perhaps the 4th of July, etc. The gay marchers have no right, and are not thematically related to the parade's original intent. The gays are involved in activism. No problem with activism, but the public has been given a skewed look at the activities and proclivities of some gay groups. Failure of the major media to show the sordid side of gay life has artificially left many people with an unjustified empathy of the gay cause. The ability of the government to regulate activities that occur within the home is exemplified by the prohibition of pedophilic activities. The government maintains the right to prosecute any adults actively engaging or having engaged in this deviate practice, regardless of the location of occurrence. As perversion progresses, I would imagine that other home based activities will also be prohibited, such as extreme forms of bondage and sadism.

The same is true with religion, the media juggernaut has begun against positive role modeling of Christian figures and followers. The same is also true with abortion. The media allows the perceived notion of the excision of a subdividing cell to represent the abortion products, suppressing at all costs the actually imagery of the products of a late term aborted fetus (baby in the trash can).

Regarding your portrayal by the media. You should note that we actually get our impression not just from our own media, but from the US media too.

Our country's cable news channels carry programs such as "60 minutes" and similar, and CNN is as inescapable as a cold virus in winter. I think every European country carries a 24-7 CNN channel on cable.

Time for you, the US citizens to sort out your own media, or at least get them to export something that portrays your country (and especially its officialdom) as a little less xenophobic and a little less violent.

I need to check this out.

>> Did you do the NAM mode (narrow AM). I did, and it worked.
>
>It works but what can I hear in NAM mode??

From: http://members.fortunecity.com/swradios/vr500.html

"In the http://groups.yahoo.com/group/VR-500/ group, there was a nice post about how to use an undocumented set of key strokes to enable the option of toggling between the regular AM filter and switching over to use the narrower filter normally only accessible through USB/LSB/CW on the VR-500. It also provides access to another menu option which apparently (at least as of now) hasn't been "cracked": "User Port". In the VR-500 menu system the narrow filter option is called "NAM" and is nice when a signal has nasty adjacent channel interference. Naturally whenever possible, using the regular wider "AM" filter setting makes music and such sound a lot better."

I have two handheld receivers and 1 Handheld Transceiver. The VR-500, the Alinco DJ-X10T, and the Yaesu VX-5R.

The VR-500 is definitely a pleasure to use, and a very good radio. My transceiver, the Yaesu VX-5R, suffers from intermod. It has been back to Yaesu, they gave it a good bill of health, but it still is as susceptible to intermod. The VR-500 and the Alinco have the attenuation feature, this I need to keep intermod to a minimum.

I live in Pittsburgh Pennsylvania U.S.A. and there is a plethora of cell phone and beeper towers. Where do you live, and do you have any of the intermod problems?

In addition to the small, handheld FRS/GMRS radios there are also some small, handheld Business Radio Service (BRS) radios being sold. The BRS includes frequencies from HF, VHF-low, VHF-hi, and UHF so I suspect that these new BRS radios are UHF only. If anyone here has a list of the frequencies that have been approved for these new radios, please post it here.

Frank

It sure looks like a BNC to me. "Field modified" but still a BNC.
BTW, a TNC has more than just a few threads.

TNCs are preferred for aviation. BNCs tend to back out under vibration
while TNCs can be safety wired. Nobody I know of uses BNC
on aircraft anymore.

Cell phone Zealots, at least that's what the Pittsburgh Police refer to people that call the police for asinine things. One thing was a security guard wanting to speak to the police about a parent spanking their child. Another was an officer that was sent to check an animal dying in a locked car. The officer checked the scene, the windows were open, the dog had a water dish, and the cop said he saw no problems, attributing the call to an animal rights zealot (his words, not mine). Another was for an accident with entrapment. The officers arrived, they found a disabled car parked by the store in question. No accident. These go on and on, many every day, not isolated incidents.

Rule violations, the same people that travel 90 MPH on a 55 MPH roadway will call the police if someone is parked in a "No Parking Zone" or in a handicapped space. They selectively choose the violations that they believe are worth penalizing.

Amen to your post.

In article <q9ekfv4m0a0pgt9embuci884mc4q4b8s3f@4ax.com>, Gary Moore <garym21@NOSPAMattbi.com> wrote:

I am not familiar with the design you are referring to , but I would surmise that it has something to do with a helically wound antenna. This is a pretty fair antenna, but you will never get a match on this with 500 feet of wire on it ! What you really would want to do with this particular antenna would be to wind about 1/2 wavelength of wire on it, for the center of the frequency band of interest. the formula for determining the half-wave length would be :

468 / freq (in mhz).

the circular disk is generally used to provide a "capacitance hat" to the antenna, thereby lowering its angle of radiation, (and in general reception), and to broaden somewhat the bandwidth of the antenna. Lowering the angle of reception would be the plan for a dxing antenna, since we are interested in signals that are at or only slightly above the horizon level. These are the furthest away, since they are coming in nearly straight from the horizon. The capacitance hat would not make much diff on this particular antenna design, since it simply does not work that way. The helical coil antenna exhibits a distributed capacitance between the turns of the coil , and a series inductance by nature of the coil, which has to usually be compensated for by trimming the top coils a bit to get the antenna "tuned". We can safely ignore the resistance in 1/2 wave of number 12 copper wire, which is generally what is used to wind the antenna. I can think of better antennas off the top of my head for dxing, notably a rotatable beam, maybe with traps in it for multiple bands, mounted at as high of a location as you can muster. These directional "beam" antennas not only provide gain in the reciever in the desired direction, but suppress noise and interference from other directions, thereby improving the signal to noise ratio by some considerable amount.

When winding the helical antenna, we start with close-spaced turns at the bottom , and gradually spread the turns a bit as we go up the rod, providing essentially a base-loaded antenna. The last 10 or 15 turns are usually put on close-spaced, as this gives a little bit of a top loading effect , which helps lower the radiation / reception angle a bit. But it's not really a DXers antenna, while the multi-rotatable beam would be.

I live in North Italy, I have only intermod problems in the 70 - 80
Mhz (police and fire department, in my country) but this is normal due
to the strong signal of the 88 108 FM broadcast.

Before vr500 I had an Icom r10; It was slow but better assembled, and
more reliable in performance. More a receiver than a scanner.

Now I am looking at a vr500 or a r10 successor.

Can you post me a link where there is a plan for scratchbuild a rubber
duck antenna for scanner??

by Robert Raketty
Staff Writer

The U.S. Supreme Court is expected to issue its landmark ruling possibly as soon as Monday, June 23, in the much-watched Lambda Legal case Lawrence v. Texas, which challenges Texas's "Homosexual Conduct." A victory would effect the 13 states that have sodomy laws on the books, and could clear the way for equal rights for Lesbian, Gay, Bisexual and Transgender Americans. Events are being planned in 25 cities nationwide, including Seattle, to mark the occasion whether the ruling is favorable or not.

"We expect that the decision will have a profound effect on a variety of civil rights issues, such as the looming battle over marriage rights for same-sex couples," said Jamie Pedersen, a Seattle attorney and co-chair of Lambda's national board. "For those who are not familiar with the case, the Supreme Court will be deciding whether the U.S. Constitution permits states to pursue criminal prosecutions against Gay men and Lesbians for having sex. Lambda Legal has been representing the plaintiffs since shortly after their arrest in Houston, Texas, in September 1998."

Lambda Legal had asked the court to strike down the Texas law because it is an unconstitutional invasion of privacy and by singling out LGBT Americans, it violates the Constitution's equal protection guarantee.

Lambda Legal, the American Civil Liberties Union of Washington and the Seattle LGBT Community Center are planning a rally to coincide with the date of Supreme Court announcement which could come as early as Monday, June 23, or as late as Monday, June 30. Local organizers plan to send out an e-mail alert with the final details of the rally the morning of the decision.

The crowd will gather at about 5:00 p.m. on the steps of the Federal Courthouse (1010 Fifth Ave.), located across the street from the new Central Library between Madison and Spring. In addition to Pedersen, who will talk on Lambda Legal's behalf, other speakers include State Reps. Ed Murray (D-43) and Joe McDermott (D-34).

Here in Seattle the Pride parade takes place in late June, and I want to make sure I'm properly ready.

I seized on a chance to attend a different parade as a warm-up. Every year the historically Scandinavian section of the city stages a Norwegian parade. My friend Mona and I decided to go.

The sweaters were beautiful, the children in their outfits adorable, and the parade had all the pizzazz of a plate of lutefisk.

It isn't that I believe men in g-strings and boas are what make a parade. But I think a parade of and for people who are still battling for acceptance can pack an emotional wallop both participants and spectators feel.

Not that the Norwegian parade was devoid of emotion. We stood next to a group of handsomely costumed youthful senior citizens who alternated speaking English and Norwegian. Whenever someone joined their party, there was enthusiastic hugging and pushing and an elbow to the kidney for Mona.

They apologized to her. Had this been Pride, she would've gotten an apology and a date.

Rather than attending such warm-up affairs, a better way to gear myself up for the Pride parade is to take a moment to concentrate on slogans and other aspects of the event, and come up with a few new ideas. The Pride organizers don't have to pay me for my suggestions. This is my community service. And I haven't even been arrested for anything.

I think it's time to expand on some of the well-known chants that arise during Pride. Consider the chestnut "We're here, we're queer, get used to it!" A number of variations suitable to the times leap to mind, like "We're here, we're queer, not to mention intersex and two-spirit!" Or "We're here, we're queer, get a load of our buying power!"

I have a soft spot for "We're here, we're queer, and so was Will Geer."

A chant heard at Dyke Marches could now include a sequel. A few minutes after bellowing "Two, four, six, eight, how do you know your wife is straight?" folks could follow up with "Two, four, six, ten, last night your wife came 'round again!"

It's my impression that chants aren't as pervasive at Pride as they used to be. Maybe we're less political now, or more diverse. Or maybe

we're too sophisticated to keep intoning "Hey, hey, ho, ho, homophobia's got to go!" Or maybe, to a degree, it has.

Turning now to the signs people carry, last year women with the Seattle Lesbian Cancer Project displayed some that earned applause. The front of one sign demanded "Spread 'em!" The back explained "Lesbians need pap tests too." Because the LGBT community is targeted by the tobacco industry, another sign read "Tell Philip Morris to stick it up his butt."

I applaud this kind of informational signage, and offer a suggestion for a sign concerning breast exams: "Touch each other. What could be better?"

Other signs I expect to see at this year's Pride include "My partner is in Iraq," "Message to Supreme Court-bugger the sodomy law," and "I volunteer to be Will's boyfriend."

One of my all-time favorite signs was attached to a stroller in Boston some years back. It read "Hatched by two chicks."

With the gayby boom in full bloom, I am bedeviled by the question of propriety at Pride. Chants, signs, floats, attire or the lack of it. How do we balance our need for self-expression with the need to parent appropriately? I remember thinking last year I could explain most of the parade participants to a child-until the Golden Showers group walked by.

I have no suggestions for tackling that issue. I do, though, have a suggestion for any protesters who plan to appear.

Don't.

2738. Seven in Ten Adult Americans Support U.S. Supreme Court

Newsgroup: rec.radio.scanner
Date: 2003-06-27 22:24:15 UTC

ROCHESTER, N.Y., June 26 -- Seventy-four percent of American adults surveyed in April 2003 favor the U.S. Supreme Court overturning state laws that criminalize private, consenting sexual relations between same-sex couples, yet allows that same private conduct to occur between opposite-sex couples. This was the finding of a national online poll released by Witeck-Combs Communications (http://www.witeckcombs.com) and Harris Interactive(r) (http://www.harrisinteractive.com).

The survey also reveals that Americans almost equally oppose laws regulating consenting sexual relations that occur in the private homes of opposite-sex and same-sex couples. Nearly nine out of 10 Americans (87 percent) oppose state laws regulating private, sexual relations that are applied to opposite-sex married adult couples and almost as many (82 percent) oppose such laws that are applied to same-sex adult couples in a domestic partnership.

"Even when we exclude respondents who self-identify as lesbian, gay, bisexual or transgender, support for overturning state sodomy laws does not change significantly," said Darin Johnson, vice president at Witeck-Combs Communications. "It is clear that an overwhelming majority of Americans believe the Supreme Court should overturn all state laws that interfere with private sexual relations between consenting adults, whether same-sex or opposite-sex couples."

These are highlights of a nationwide survey of more than 2,000 adults, of whom approximately seven percent self-identified as gay, lesbian, bisexual or transgender (GLBT). The survey was conducted online between April 17 and 23, 2003 by Harris Interactive, with analysis of GLBT data provided by Witeck-Combs Communications, Inc., a strategic public relations and marketing communications firm with special expertise in GLBT issues.

"These numbers tell the same story we've been telling courts in this country for years: the vast majority of Americans support the right to privacy of all people, including gays and lesbians, and oppose anti-gay discrimination," said Kevin Cathcart, executive director of Lambda Legal Defense and Education Fund, the national gay rights organization bringing the Supreme Court challenge to consensual sex laws.

Across the board, regardless of income, gender, age, region of the country, or political philosophy, Americans overwhelmingly oppose state laws that regulate sexual relations that occur in the private home of an adult same-sex couple.

Editors Note: Data tables available upon request.

2739. Hormones OK’d for Pa. inmate

After a five-year court battle, state prison officials have agreed
to provide female-hormone therapy to trans woman Jessica Elaine Wolfe,
who is incarcerated at the State Correctional Institution at Graterford.
Wolfe filed a lawsuit against the state Department of Corrections
and various officials on April 30, 1997, seeking trans-related
medications and the ability to present herself as a woman in prison.
The case was settled on July 24, 2002. Terms of the settlement are
confidential, according to court records.
However, the Pittsburgh Tribune-Review recently reported that Wolfe
is receiving hormone therapy and other medications.
Wolfe also has received an undisclosed amount of money to settle the
case, said Richard J. Wickersham, a defense attorney in the case.
Sean Connolly, a spokesman for state Attorney General Mike Fisher,
referred all questions to state prison officials.
U.S. District Judge Anita B. Brody, who handled the case, also
declined to comment.
Prison spokeswoman Susan McNaughton confirmed that a state-prison
inmate is receiving Premarin, an estrogen replacement drug, and Lupron
Depot, a medication that decreases testosterone levels.
However, McNaughton declined to identify the inmate, citing privacy
and medical confidentiality rules. She did not refute the Tribune-
Review story.
Wolfe, 39, is serving a 5- to-15-year sentence at Graterford for
raping an 8-year-old girl in 1995. She could not be reached for comment.
Her name was legally changed from James Elliot Wolfe to Jessica
Elaine Wolfe after her incarceration in July 1996, according to court
records.
Wolfe was denied parole in September 2002. Her next scheduled parole
interview is in September 2004, although she may apply for an earlier
parole interview in September 2003, according to state parole-board
records.
Jerry Galinski, a spokesman for the prison, said Wolfe does not have
a cell mate at Graterford. If an inmate harasses Wolfe, he will be
disciplined promptly, he said.
Kristine Holt, a local transgender attorney, praised the settlement.
“It’s a good thing,” Holt told PGN. “I’m glad the state is
providing
medications for her. Medications shouldn’t be withheld from her just
because she’s a trans woman.”

Holt stopped short of saying Wolfe should be housed in a female prison.
“I realize it may be difficult to place her in a women’s prison,” Holt continued. “But I do hope the state is making some sort of accommodation for her protection - and I don’t meet 23-hour-a-day confinement for her.”
Galinski said Wolfe is housed in a section of the prison that has increased supervision, but she is not confined to her cell more than an average prisoner.
According to state-prison policy, inmates with penises must be assigned to male prisons, despite an inmate’s outward appearance or gender expression.
There are no prison units specifically set aside for transgender inmates, according to state-prison policy.
Phyllis Randolph Frye, another transgender attorney, conveyed support for Wolfe.
“A person is in prison because they’ve done something wrong,” Frye said. “But that’s no reason to treat them inhumanely. My main concern is the protection of the transgender person. They need to be segregated without being isolated.”
She questioned why the case ensued for more than five years.
“I don’t understand why prison officials are so mean as to spend thousands and thousands of dollars in litigation, rather than give someone their hormone,” Frye continued. “Who does it hurt, other than someone with a trumped-up feeling of control? We need sensitive medical professionals to help make these decisions.”
McNaughton said prison officials do consult with transgender-related medical experts, when necessary. She said the state Department of Corrections has not established a transgender advisory board to assist with formulating prison policies.

2740. Gay Pride Picnic 2003 Recap

About 270 people, an all time record, came together to celebrate the 11th annual Pride Erie Picnic at Presque Isle, Beach 11 on June 14, 2003. Once again, we had hot dogs and hamburgers and folks brought a yummy assortment of dishes. There were about 225 people at last year's picnic, which was the previous record amount for attendance.

Thanks to Coca Cola of Erie for donating soda, Paper Moon, Plymouth Tavern, Two Friends Italian Market and Antler's Pub for donating cases of water, plates and etc. We are also grateful to the Zone for donating the hamburgers, cheese and hot dogs, and the Village for donating buns and ice.

As has always been the case, folks brought their friends, families and pets. We had people from Pennsylvania, New York and Ohio. We also had a wide range of ages and backgrounds attending. One attendee emailed afterwards that he liked the Erie picnic more than one of the nearby cities because it was more like family, whereas the other city's felt more commercial and less personal. Two women from San Francisco were back in the Erie area for a graduation ceremony and joined us at the Pride Picnic after hearing about it.

Again, we really feel that the picnic was such a success because so many people interacted one on one with others who may not have known about the event. All of us working together help our community to have an event to be extra proud of!

Thanks to Paul Grubbs, Don, Ken Blood, Dave Amy, Keith Roumfort, Matthew Miller, and Patrick for setup/truck driving. One of the original truck drivers wasn't able to make it, so extra special thanks to Paul Grubbs, Don and Ken Blood for stepping in when needed.

Big thanks also to Dave Amy, Keith Roumfort, and Bob for cooking. We had a slight bit of a difficulty when we realized only 1 spatula had been packed for cooking. The cooks mysteriously balked at the possibility of turning meat with their bare hands and facing third degrees burns (wimps!), so thanks to Larry for emergency cookware delivery. Many thanks to everyone for bringing such a delicious array of food!

There were some info tables and personnel on hand. The Health Department had safer sex info, and the Hispanic American Council as well. Steve Glassman of SPARC was able to get almost 150 signatures to send to elected officials to amend the PA Human Relations Act, our state's version of civil rights legislation. People who signed had to be PA residents and over the age of 18, so not everyone was able to

sign. Trigon had a display about the upcoming Pride Weekend happening on September 12-14. The Green Party also had info, as did the Crime Victim Center, PFLAG and other organizations.

We would like to thank Rashima for being dot mistress and diligently passing out numbered stickers, so we knew how many people attended. It was very edifying to see that we had a slight increase and that there were so many first time people.

We took the picture in a slightly different spot at the beach than in years past. Folks also played volleyball and caught up with old and new friends. Big thanks to Deb Spilko, who took photos throughout the day and Brian Skelly, who took the group photo!

Big thanks to those who helped with clean up, including Dave Amy, Keith Roumfort, Brian Skelly, Matthew Miller, Larry, and Evan.

And, as always, many thanks to those of you who talked with friends, or mentioned in chat rooms, and otherwise helped us get the word out. Thanks to everyone who came and made the day so enjoyable!

For next year's picnic, we are considering trying to move to the larger space at the Cookhouse, by Beach 6. This would have the additional advantages of having electricity, and much more space (the pavilion is only rated for 80 people, but the cookhouse is rated for 240), and the info area spills into the end of the end of where food is), and it is also located closer to the entrance, so missing something wouldn't mean having to do without.

2741. ITS LAW SAME-SEX COUPLES MARRY IN ONTARIO, CANADA

Same-Sex Couples Who Wed in Ontario May Face
Discrimination in the United States

WASHINGTON - The Human Rights Campaign joined gay, lesbian, bisexual and transgender community legal and advocacy groups today in lauding the Ontario appeals court June 10 ruling recognizing civil marriage rights for same-sex couples. American same-sex couples are also able to wed in Ontario under this ruling. HRC strongly believes that these marriages should be treated equally and given the same respect as any marriage, but warns that married couples returning home to the United States can expect to face discrimination under federal law and many state laws. But we also believe that some states, businesses or other institutions will honor these marriages, says HRC.
"Ontario's landmark ruling -- and the Canadian government's decision not to appeal it -- recognizes that the Canadian Constitution mandates civil marriage equality for its gay and lesbian citizens. Obviously, this ruling pertains to the civil marriage license issued by the province and will not affect what marriages religious institutions choose to sanction. Leaders in the United States should take note of this ruling and recognize that all committed couples deserve to be treated with the same dignity and respect," said HRC Executive Director Elizabeth Birch. "Couples who marry in Ontario and return to the United States seeking the same rights, responsibilities and obligations that heterosexual married couples receive should be aware that discriminatory laws in this country remain a problem. We will continue working to end marriage discrimination in this country."
Whether or not same-sex couples choose to marry in Canada, they should take steps to protect their families at this time. Couples should continue to secure wills, heath care proxies, adoption and co-parenting agreements, and consult with lawyers and financial advisors to set up a safety net of legal documents. Visit HRC FamilyNet at www.hrc.org/familynet for more information. If you are a member of the armed services, a foreign national living in the United States or you receive public assistance, getting married could have significant consequences. Finally, if you do marry, consult with an attorney before signing and filing government forms as a married couple.
Same-sex couples are denied the freedom to marry in all 50 states. In 37 states, anti-gay forces have added an extra layer of discriminatory legislation. Same-sex couples also do not have access to the rights, benefits and responsibilities of marriage that opposite-sex couples receive under federal law. It is imperative that any challenges to these laws and to other obstacles certain to arise be made strategically, working with the GLBT legal groups that are already

involved in efforts to secure civil marriage rights for gays and lesbians in the United States.
The Gay & Lesbian Advocates & Defenders (GLAD), Lambda Legal, the National Center for Lesbian Rights (NCLR), the American Civil Liberties Union Lesbian & Gay Rights Project and Freedom To Marry are among those leading the efforts for civil marriage rights for same-sex couples. Legal challenges are pending in two states, Massachusetts (plaintiff couples are represented by GLAD) and New Jersey (plaintiff couples are represented by Lambda Legal).
In a joint statement released last week, several of the groups listed above cautioned that "couples should absolutely not race across the border" to set up lawsuits in response to discrimination against marriages granted in Canada. "The wrong cases could set us back for years. We will be strongest if we work together," the groups added.
To contact the groups, visit their websites at: www.glad.org, www.lambdalegal.org, www.nclrights.org, www.aclu.org and www.freedomtomarry.org
The federal Defense of Marriage Act of 1996 creates a federal definition of marriage and spouse, limiting the definition of marriage to a "legal union between one man and one woman as husband and wife," and spouse to "a person of the opposite sex who is a husband or a wife."
According to a 1997 General Accounting Office study, the law denies unmarried couples more than 1,000 federal rights, responsibilities and obligations associated with civil marriage, including the right to Social Security survivor benefits and to file jointly for taxes.
"U.S. law discriminates against same-sex couples in federal programs, such as immigration, federal tax benefits and family medical leave," said HRC General Counsel and Legal Director Kevin Layton. "Marriage could open the door to hundreds of rights, responsibilities and benefits that are currently being blocked by discriminatory laws in many states."
"Still, we expect some states, businesses or other institutions to treat the marriages of same-sex couples with equal respect," noted Birch. "Gay and lesbian couples ought to be able to expect their lawful marriages to be honored. Furthermore, we should all celebrate the fact that people will now see lawfully wedded same-sex couples living ordinary, everyday married lives. And the sky won't have fallen in the wake of this victory."
HRC advocates at the federal level and partners with GLBT advocacy organizations at the state level for policy and legislation to ensure equal treatment for same-sex couples, including civil marriage and the granting of individual rights and responsibilities, such as inheritance and hospital visitation rights. Visit www.hrc.org to find out more about HRC's work on these issues.
The Human Rights Campaign is the largest national lesbian and gay political organization with members throughout the country. It effectively lobbies Congress, provides campaign support and educates the public to ensure that lesbian, gay, bisexual and transgender Americans can be open, honest and safe at home, at work and in the community.

SAA Picnic Held at Park; No Harassment
Phil LaPadula

A local gay man who was cited for indecent exposure while sitting on a beach at John Lloyd State Park in a white swimsuit has been found not guilty after defending himself in a Hollywood court.

Judge Lee Jay Seidman declared Tracy Faulkner, a registered nurse, not guilty of two counts of indecent exposure after examining the swimsuit and hearing testimony from Faulkner and the arresting officer, David G. Pius. In his citation, Pius said the swimsuit was “less than fully opaque.”

“I am thankful to live in a country where a regular person can defend himself against injustice and win,” Faulkner said. “I am also grateful to the bailiff, who followed us to the parking lot to congratulate me. She said more people should stand up for themselves. And I am most thankful to Judge Lee Jay Seidman for his fairness and patience.”

Faulkner is one of nine gay men who attended a meeting at the Law Offices of Kent and Cormican on June 10 to discuss the possibility of a class-action suit against park officers who have been accused of targeting gay men and falsely accusing them of violations at John U. Lloyd Park. Kent and Cormican have the names of 15 gay men who are willing to testify in a possible class-action suit that they were harassed and/or falsely accused of violations by officers in the park. One of the men at the meeting, Nunaz Guerra of Hollywood, said he was falsely accused of engaging in sex on the beach. Guerra said he was standing on John Lloyd beach talking to another man when an officer came up and shined a flashlight on him. Guerra said the officer asked to see his ID. Guerra said he asked the officer, “What’s going on?” The officer then told him that he was under arrest for engaging in oral sex. Guerra said he was shocked. “We were just standing and talking,” he said. “If I had done that and gotten caught, I would have admitted it,” he said. “We were both standing. The other person would have had to be on his knees to do that.”
Another man at the meeting, Jose Mendoza, has pled not guilty to a charge of sitting “in a restricted area” on John Lloyd beach. Mendoza said he was sitting about 20 feet from the water on a sand dune above a ledge. Like several other gay men charged with the same violation, Mendoza said he had no idea he was doing anything wrong. “The park has been completely negligent about informing people about this restricted area,” he said. His trial has been rescheduled for June 23.
J. Luis Jimenez, said he was stopped by Officer David G. Pius, the same

officer involved in the swimsuit case, and Officer D. Jones while jogging through the park on a trail. Jimenez said Officer Jones told him, “This doesn’t look like a restricted are, but it really is.” According to Jimenez, the officers asked to see his ID. After he told them it was in his car, the officers followed him back to the car, searched his car and searched a backpack in the car, Jimenez said. “They kept asking me questions,” he said. At one point, Jimenez said the officers asked if he had urinated in the area. “When someone passed on the trail, they asked me if I knew him,” Jimenez said. “I said, ‘No, he waved at you.’” The officers gave him a warning for being in “a restricted area” and left.

Jimenez, who teaches environmental studies at a local college, said, “I have traveled all around the world to national parks, and whenever there are restricted areas, there are always signs.” He added, “I have seen [the park officers drive vehicles all over the protected vegetation. They are disturbing the ecosystem.”

Rodger Stamp, a Hollywood resident, contacted The Express last week and said he has witnessed harassment and false arrests at John U. Lloyd Park and been targeted himself. “I saw a guy on the beach take off his shorts,” Stamp said. “He had a bathing suit under the shorts. Officer Jones came up to him and told him he was under arrest for masturbating on the beach.”

Stamp said an officer once stopped him along a trail and asked to see his ID. “He told me I was in a ‘high sex-crime area’ and that I wasn’t supposed to be there,” Stamp said. “I wasn’t doing anything wrong; I was just walking on the nature trails.”

Stamp said the majority of people he sees having sex on the beach are heterosexual couples. He said he once saw a couple on the beach. According to Stamp, the woman was wearing no top and a thong bathing suit.

The Express faxed a list of eight questions to the Lucia Ross, media and public relations spokesperson for the Florida Department of Environmental Protection, Division of Law Enforcement, more than two weeks ago. She promised to give them to Major Elwood Stevens, bureau chief of the park patrol. On June 7, Ross told The Express that the department was “drafting a response.” The Express still has not received any response. The department has also declined repeated requests from The Express to talk with the officers involved in the incidents.

Meanwhile, the Sunshine Athletic Association (SAA), a local gay group, held its annual picnic at John U. Lloyd park last weekend. About 100 members of the group showed up, and there were apparently no incidents, according to Andy Eddy, an SAA member. “Some people called and were afraid to go, but nothing happened,” Eddy said. In fact, he said the park officers on duty that day “were very nice. They came around and emptied the trash.”

2745. Historic Moment of Gay Pride in West Palm Beach

West Palm Beach Mayor Lois Frankel just added a splash of color to city hall. But she didn’t have the building painted, and she’s not redecorating her office. On Saturday morning, June 21, Frankel made history by being the first mayor of West Palm Beach to raise the colorful symbol of gay pride—the rainbow flag—on the city hall flagpole.

On June 6, Frankel received a letter from Compass, Palm Beach County’s LGBT Community Center, requesting the display in honor of the Stonewall Gay Pride Celebration. Frankel said she didn’t give the request a second thought. “They asked if we would raise the flag, and I’m happy to do it,” the mayor said. “We have a significant and important gay population in West Palm Beach that’s been very instrumental in the development of a number of our neighborhoods.”

The rainbow flag will fly over city hall until Monday, June 23.

On Saturday evening, June 21, Compass held its annual Stonewall Ball fundraiser at the Harriet Himmel Gilman Theatre at CityPlace in downtown West Palm Beach.

Frankel joins a growing number of Palm Beach County politicians visibly supporting Pride celebrations. In March, Lake Worth Mayor Rodney Romano raised the same rainbow flag over Lake Worth’s city hall in honor of Compass’ Pridefest event held in Bryant Park.

Jamie Foreman, president of the Palm Beach County Human Rights Council, commended Frankel for her decision to fly the flag. “It’s recognizing the contribution of gays and lesbians to the community,” he said. “Throughout her career in public office, Lois has always been a strong ally.”

Frankel said, “I want people to feel comfortable, and live and work and feel like you’re a part of this city, regardless of your sexual orientation. This is a city for everyone, and diversity is what makes us so special.”

2746. Pridelines Prom Attracts 700 Gay Youths

‘Heat of the Ocean’ Event Makes Waves in Miami
Mike Buhl and Mike Irwin

Pridelines Youth Services—a local organization for gay, lesbian, bisexual, transgender and questioning youth—held its eighth annual youth prom on Saturday, June 14. “The Heart of the Ocean,” held in the Wolfson Ballroom of Temple Israel in Miami, attracted over 700 youths, as well as four local TV news stations.

The prom kicked off with a performance by Elaine Lancaster and MTV’s Rachel Robinson and Shane Landrum from Battle of the Sexes. After their welcome, Party 93.1’s DJ Sizzle cranked up the music. The singing group Unite and Fight, a collaboration between Pridelines Youth Services and Youth Expressions, performed the song “Killer on the Loose” followed by a show from Florida She King 2003, Blake.

With the call for entries for the prom king and queen contest, the youths rushed to be one of the first five entries for each title, at the Pridelines table, near the entrance. After all of the entries were taken, Robinson and Landrum began the contests. The contestants were judged first by their looks and then by how they danced. Bryan Crook of Miami was named King of the Seven Seas, and Odiissi of Miami was named Queen of the Mermaids.

Crook is an 18-year-old Killian High School graduate who has been involved with SAVE Dade and Florida’s Humane Farms. Odiisi is a 19-year-old Jackson High School graduate who volunteers for Pridelines.

Co-host, Shane Landrum has attended as many as 50 events this year. “This is the first youth event that had such a low age range,” he said. Landrum has been involved with the gay community since high school; however, he has only been open about his sexuality for four years. Asked why he volunteers within the community, he said that he “loves to help all the people.”

Landrum is in a relationship that has lasted a year and is still going strong. Landrum also has a website, www.ShaneLandrum.com.

Pridelines Youth Services is dedicated to providing a safe, supportive, fun and educational environment for gay, lesbian, bisexual, transgender and questioning (gay) youth in South Florida. The group designs and implements specific health promotion programs (drugs, alcohol, sexual health, smoking, self-esteem building, etc.), which enable and nurture healthy lifestyle choices. Pridelines offers a variety of resources, in the forms of brochures, magazines, books and videos. The service allows youths to express themselves through writing, art and at Youth Town Meetings. Such programs provide a safe and nurturing environment and break the isolation that places gay youth at high risk for drug abuse, suicide, hopelessness and school truancy.

Pridelines also provides skill-building and leadership opportunities within the agency itself as well as at local and national levels. The group is also expanding its outreach so that more youth, and the community at large, are aware of the resources available.

2747. Being Gay, Pride in Who We Are

Newsgroup: rec.radio.scanner
Date: 2003-06-27 23:01:18 UTC

Once again, we gather to celebrate Pride. That means we have to support those who are with us, and condemn those who would destroy us, because being who you are means standing up and saying that you will not be denied.

Those who would deny you decency must be defeated. Power concedes nothing without a demand. Never has. Never will.

Accordingly, we today censure the series of federal judicial nominations that would bring to the bench a gathering of Neanderthals in black robes. The latest entry in the parades of myopic misanthropes is Alabama Attorney General William Pryor, nominated to the 11th Circuit Court of Appeals in Atlanta, that forum where federal cases in Florida eventually wind up.

It is no surprise that Mike Signorile, one of our writers, in his national column, referred to Pryor as a judicial maniac; one of the many demagogic nominees who are a presidential payoff to the Christian right.

Pryor has called the woman’s right to abortion “the worst abomination of constitutional law in our history.” He defended infamous Alabama state judge Roy Moore, who posted the Ten Commandments in his courtroom and had them engraved in a monument in the court building’s rotunda, where they stay, awaiting an appeal from a higher court.

Pryor believes that accepting homosexuality and decriminalizing gay sex acts will lead to sex with human corpses, as well as with assorted members of the animal kingdom.

“A constitutional right that protects ‘the choice of one’s partner’
and ‘whether and how to connect sexually,’” Pryor has written, “must
logically extend to activities like prostitution, adultery, necrophilia, bestiality, possession of child pornography and even incest and pedophilia (if the child should credibly claim to be ‘willing’).”

Last week Pryor appeared before the Senate Judiciary Committee, explaining, among other things, that he canceled a trip to Disney World because “Gay Days” were being held there. “He wanted to save his daughters from the evil queens he believes are prancing around the Magic Kingdom,” Signorile wrote in his column.

When we hear of the president meeting at the White House with Log Cabin Republicans, we want to applaud him for supporting the umbrella of diversity. But we are beginning to think he is sucking us into the lion’s den in order to chew us up and spit us out. Throw a few bones to the beggars and then step all over them.

WASHINGTON, June 26 (AFP) - In a major ruling with wide-ranging implications for homosexual and privacy rights, the US Supreme Court ruled
Thursday that states cannot ban sodomy between consenting adults.
The ruling, following a case in which two Texas men were arrested for
having sex in a private apartment, was acclaimed by gay rights groups but
bitterly condemned by conservatives.
"The case does involve two adults who, with full and mutual consent from
each other, engaged in sexual practices common to a homosexual lifestyle. The
petitioners are entitled to respect for their private lives," the court said
in its 6-3 decision.
"The state cannot demean their existence or control their destiny by making
their private sexual conduct a crime."
Texas was one of four US states where it had been a crime for members of
the same sex to engage in sodomy. In Texas this was defined as oral or anal
sex.
The challenge to the Texas statute started after sheriff's deputies in
Harris County arrested John Lawrence and Tyron Garner when they were
discovered having sex in Lawrence's apartment in September 1998.
Police broke into the apartment in response to a weapons tip that proved
unfounded. Lawrence and Garner were both convicted and ordered to pay fines of
200 dollars each.
The Texas state appeals court upheld the sentence, ruling that the law
"advances a legitimate state interest, namely, preserving public morals".
The Supreme Court ruling overturns sodomy laws across the United States,
including those in nine states which outlawed the practice among heterosexuals
as well as homosexuals.
The administration of President George W. Bush, who served as

governor of
Texas, declined to comment on the ruling, reflecting the highly
divisive
nature of the topic.
Ruth Harlow, the lawyer for the two Texas men, said the ruling
recognized
the "basic humanity" of gay and lesbian Americans.
"All of us as Americans have the right to choose how we can express
our
love for one another in the privacy of our own homes," Harlow said.
"The court is just catching up with American society, which has made
major
progress."
Michael Adams, with the gay legal advocacy group, Lamda Legal
Defense Fund,
said the ruling would facilitate fights against other areas in which
gay
people continue to face discrimination, including employment and
marriage.
The Americans Civil Liberties Union called the ruling "historic."
"With this decision, the court has finally recognized that we
(homosexuals)
are part of the American family," said James Esseks with the ACLU's
Lesbian
and Gay Rights project."
"By acknowledging that we are not criminals, this decision will make
it far
easier for us to get society to change."
But converatives blasted the ruling, saying it could lead to an end
to laws
banning incest, bigamy and beastiality.
"Just because the court doesn't care for the law in Texas they have
invented a 'right' to unlimited sexual expression that is nowhere in
the
constitution," said Robert Knight, director of the Culture and Family
Institute, a converative advocacy group.
He said the court had "no business substituting their immorality for
the
Texas people's moral standards."
"This puts laws against prostitution, incenst, bigamy and even
beastiality
in jeopardy, because if the right to privacy trumps all other
considerations,
then there is no defense for upholding any law bearing on sexual
morality."
Tom Minnery, of the conservative Focus on the Family agreed.
"With today's decision the court continues pillaging its way through
the
moral norms of our country," he said in a statement.
"If the people have no right to regulate sexuality then ultimately

the
institution of marriage is in peril, and with it, the welfare of the
coming
generations of children."

2750. Lambda praises gay rights ruling

Newsgroup: rec.radio.scanner

WASHINGTON, June 26 (UPI) -- The Lambda Legal Defense & Educational Fund called Thurday's ruling by the Supreme Court on gay rights a "landmark."

"Today the U.S. Supreme Court closed the door on an era of intolerance and ushered in a new era of respect and equal treatment for gay Americans," said Ruth Harlow, legal director for the lesbian and gay civil rights group.

The U.S. Supreme Court struck down Texas' law against homosexual sodomy, which criminalized oral and anal sex by consenting gay couples.

Lambda represented John Lawrence and Tyron Garner, who were arrested in Lawrence's Houston home and jailed overnight after officers responding to a false report from an acquaintance found the men engaged in private, consensual sex.

Once convicted, they were forced to pay fines and are now considered sex offenders in several states. In addition to Texas, 12 states have consensual sodomy laws, some of which apply to straight and gay adults alike.

His childishness was obvious from the beginning. The only question is: Is he really worth all of the trouble? You could complain to abuse@altopia.com (Chris Caputo), and if you include enough of his posts which originate at Altopia, you can probably have his crossposting ability turned off. The trouble is, he is also using whatever remailers are available to him, and Caputo has no control over them. You would then have to persue him one remailer at a time.

Instead, may I suggest that you go to http://cws.internet.com/news-xnews.html and download the free newsreader called "Xnews?" It can filter out entire sites, rather than ever-changing nicks, and filtering on the basis of the originating site will also allow the real nym owner's posts to come through unimpeded, while the child's posts are blocked.

You would set up Xnews to filter on the basis of the Path header and kill any posts which contain any of the strings

sewer-output
gilgamesh-frog
uncensored-news
nym.alias.net
alt.net

in that header. That will kill all posts from all of the various servers that the child has been using, NO MATTER WHAT HIS NYM, and will allow everyone else through. I'm filtering that way now, and that's how your posts get through while his posts get killed.

In the meantime, be aware that the child *is* being persued, but that it will take time before any results are evident.

SUPREME COURT REJECTS SODOMY LAWS:
Highest Court Affirms "Equal Protection" for Gays and Lesbians

(Washington D.C.) - In the most sweeping decision ever on gay and lesbian rights, the nation's highest court ruled today that so-called "sodomy" laws are unconstitutional. The term "sodomy," which has been defined differently depending on the jurisdictions, the judge and the era it was interpreted, was challenged in part because of its vagueness.

"This decision is a victory for all Americans," said Jeff Montgomery, Executive Director of Triangle Foundation, Michigan's leading civil rights organization for gay, lesbian, bisexual and transgender people. "The government should not be meddling in people's bedrooms. Everyone has a basic right to privacy and should not live in fear that police could enter their home, arrest them and throw them in jail for adult, consensual sex in their own home. The court has finally corrected one it's most embarrassing decisions ever (Bowers v Hardwick) and affirmed equal protection for gay and lesbian people. This decision is fantastic news for all Americans interested in stepping out of the past and respecting all relationships for what they contribute to our society. Finally gay, lesbian and bisexual Americans can be freed from the label of 'criminal' or 'outlaw' in this country"

Lawrence v Texas was challenged mostly because the Texas statute criminalized same-sex only "sodomy." Lambda Legal Defense and Education Fund argued that these and other sodomy laws violated the Fourteenth Amendment's equal protection clause because it targeted gay, lesbian and bisexual people for prosecution. The case also argued that the statute violated the fundamental right to privacy.

Michigan is one of approximately 15 states have some form of sodomy law still on the books. Michigan's statute "MCL 750.158 The Abominable and Detestable Crime Against Nature" has roots dating back to 1820. Michigan's sodomy laws were stricken down in 1990 (MOHR v Kelly) with plaintiffs from several counties and attorneys from the Michigan Organization for Human Rights (MOHR) and Lambda Legal Defense and Education Fund (LLDEF). The Wayne County Circuit Court decision was never appealed by the Attorney General so opponents of the law believe it is already unenforceable anywhere in Michigan. Others argue that because the law is still on the books, it was enforceable until today.

"This decision will have and unprecedented impact on the lives of every gay, lesbian and bisexual American," said Rudy Serra, Criminal and Civil Rights Attorney and Triangle Foundation Board member. "The

presence of sodomy laws has been the single largest legal obstacle to gaining full civil rights in this country. By claiming that gays and lesbians are felons, anti-gay judges and policy makers have blocked laws allowing equal rights, hate crime prosecutions, and equity in parenting and family benefits."

by Ann Rostow
Gay.com / PlanetOut.com Network

On Friday, one day after striking down sodomy laws in the Lawrence v. Texas case, the U.S. Supreme Court instructed the Kansas Court of Appeals to revisit an earlier case that raises the issue of discriminatory treatment of a gay man.

The high court vacated the decision in the case of Matthew Limon, a teenager who received a 17-year prison sentence for having consensual oral sex with a younger teen in the residential boarding school they both attended. The Kansas court upheld the sentence, and the Kansas Supreme Court declined to intervene.

The American Civil Liberties Union (ACLU) had petitioned the U.S. Supreme Court to accept the case for review, but the justices had not responded one way or another to the ACLU's request. Although the high court did not accept review, the message they sent to the Kansas court one day after the Lawrence decision was clear: Reduce the sentence.

Under a Kansas statute, the "Romeo and Juliet Law," heterosexual teens who are caught having consensual sex are treated as an exceptional case under the laws that govern underage sexual activity. Provided the miscreants are under 19, and provided the younger participant is between 14 and 16 and no more than four years separate their ages, the teens are subject to a maximum sentence of one year.

Homosexual teens involved in the same activity, however, are given no leeway, and prosecuted as adults. Matthew Limon received an even harsher sentence than usual, due to a previous incident of this sort on his juvenile record. As such, the youth was facing nearly two decades behind bars for the "crime" of having consensual oral sex with another boy. Limon had just turned 18 at the time of the encounter, while the other boy was about to turn 15.

The case had one constitutional claim in common with the challenge to the Texas sodomy law, namely that the statute punished same-sex couples more severely than heterosexual couples for no apparent logical reason. The ACLU did not argue that Kansas's treatment of underage partners violated their right to privacy.

Although Thursday's majority opinion was based on the right to privacy, and not the right to equal protection at issue here, the court made clear that gay men and women stand on an equal constitutional footing with heterosexuals, and that morality alone cannot justify

discriminatory laws.

In a press release Friday, ACLU Lesbian and Gay Rights Project Litigation Director James Esseks said the Lawrence ruling means that "states can no longer get away with ... unequal treatment. We hope that this is the first of many wrongs that yesterday's ruling will correct."

by Ben Thompson
365Gay.com Newscenter
Ottawa Bureau

Posted: June 27, 2003 12:01 a.m. ET

(Ottawa) As hundreds of same-sex couples converge on city halls across Ontario to get marriage licenses a leading Roman Catholic churchman has issued a strongly worded warning to priests in the province.

Marcel Gervais, Archbishop of Ottawa and a former president of the Canadian bishops' conference, has told Catholic clergy they will be suspended if they perform any gay marriage.

"In the Catholic Church, an attempted marriage of two of the same sex would not be recognized and the person officiating would be suspended from their sacred duties," Gervais said.

Gervais said the church will continue to recognize marriage as "the union of one man and one woman to the exclusion of all others."

The Archbishop said no court ruling or act of Parliament will change the Church's position.

In announcing the government would not appeal an Ontario court ruling that struck down the ban on gay marriage Prime Minister Jean Chretien last week said legislation to extend gay marriage across Canada would respected the rights of religious organizations.

NY Times:

ASHINGTON, June 27 — In one of the first consequences of its landmark ruling on gay rights on Thursday, the Supreme Court today set aside the lengthy prison sentence imposed on a gay Kansas teenager for having had sex with a younger boy.

In a brief order with little elaboration, the court vacated the 17-year sentence imposed in 2000 on the defendant, Matthew Limon, and returned the case to the Kansas courts "for further consideration in light of Lawrence v. Texas."

Most North Americans may not have visited Manchester, England's second-largest city, but that doesn't mean they haven't seen it. Even without ever being aired on American television, "Queer As Folk" -- the gay-flavored British mini-series, predecessor to the American series of the same name -- became an underground video sensation in gay households across America. So it's not too surprising that this saucy series made a star out of one its lead players -- the city of Manchester itself. Almost overnight Manchester's reputation as a forlorn, past-its-prime industrial burg has been updated: Now it's one of the hottest gay cities on the planet!
And the timing for Manchester's long-awaited close-up couldn't be better. This year Manchester will host thousands of gays and lesbians from around the continent (and the world!) for EuroPride 2003 (+44-161/238-4568, fax +44-161/238-4579; www.europridemanchester 2003.com, info@europridemanchester 2003.com; August 15-25), one of the biggest, brightest, gayest events of the year. With past EuroPride events having been in luminary spots such as Paris, Cologne and Rome, Manchester puts itself squarely on the map with this event.

Much has happened in the past decade to warrant this recent star treatment. The explosion of bars, shops and restaurants around Manchester's Canal Street area resulted in the vibrant neighborhood now known as the Gay Village. This nine-block region is a proudly touted as headliner in the city's funky roster of attractions, drawing throngs of gay folks out every weekend. Just south of town, across the water from the stadium that's home to soccer heart-throb David Beckham and his Manchester United teammates, there's The Lowry, a brand spanking new art and performance venue housed in a gleaming, cutting-edge facility reminiscent of Frank Gehry's Bilbao Guggenheim.

All over Manchester you can find smart eateries, cool live music venues (the city's famous music scene has spawned the likes of The Smiths, Simply Red, M People, and Oasis), and just lots going on. In amongst the blocks of red-brick Victorian architecture, students swarm (this is England's biggest university town), hipsters hang, and queer folks live it up.

Given all of this, plus Manchester's tradition of liberal politics (there's not one Conservative amongst the city's 70 city council members) and its proximity via train and plane from London and other major North American and European cities (Manchester International Airport serves 175 countries across all five continents with six direct flights to and from the U.S.), there's no reason why you can't check it out for yourself.

2764. Indictment In Gay Cannibal Case

(Kassel, Germany) A man accused of murdering and then cooking and eating a man he met on the internet is expected to be formally charged today.

The case dates back two years. The suspect, identified only as Armin M., until he appears in court, has admitted videotaping himself killing the Berlin man, a computer chip developer at Siemens corporation, identified only as Bernd Juergen B.

Police originally thought they were investigating a murder but now say they are convinced the victim allowed himself to be led to the slaughter.

On the morning of his disappearance 9 March 2001, Bernd Juergen B completed his will. He left the bulk of his estate including a lavish penthouse apartment and EUR 50,000 worth of computer equipment to his domestic partner, a man named Ren&#65533;.

According to police, the victim had large amounts of cash and his passport when he travelled 300 kilometres from Berlin to the alleged murderer's house near Kassel.

Searching the rambling, 30-room, half-timbered house in the village of Rotenburg, investigators unearthed skeletal remains, some of them packaged in a freezer, along with videotapes and CD-ROMs on which the suspect allegedly recorded his actions.

Authorities were tipped off to the crime by internet surfers who stumbled upon chat room requests allegedly posted by the suspect in which he was looking for people willing to be slaughtered and eaten by him.

2765. Boisterous rally at Utah Capitol backs sodomy ruling

By Derek P. Jensen
The Salt Lake Tribune

Hailing a decision by the U.S. Supreme Court that struck down a Texas sodomy law, a boisterous crowd of 200 cheered, hugged and applauded speakers Thursday while gathered on the sunny steps of the state Capitol as rainbow flags flew.

"It's a major political event," said Ernie Hale, standing next to his partner. "I don't normally come to something like this, but it's a big deal. It's a long time coming." Waving a large rainbow flag, Kathy Worthington of Taylorsville said she has followed the gay sex debate for many years. "This is historic, it's really historic," she said.

Worthington -- who is planning a trip to Canada next week to marry her partner of 11 years -- said the high court's decision will have an immediate effect on the issue of gay clubs in Utah schools. "We won't have legislators saying, 'It's illegal activity,' " she said.

Salt Lake resident Scott McCoy said he was thrilled to see the crowd: "You see all stripes, all walks of life here. Families, children -- it's great."

Throughout the hourlong rally, there was no vocal opposition.

Civil rights attorney Brian Barnard -- who has challenged Utah's sodomy law for years -- announced to the crowd, "I do not care what Gayle Ruzicka [leader of Utah's Eagle Forum] does in the privacy of her own bedroom," to a wave of laughter.

Utah Families Coalition spokeswoman Laura Milliken Gray said Thursday's decision could give her group ammunition to challenge Utah's adoption ban for gay couples.

Following the rally, Joe Watts, standing with Sharon, his wife of 41 years, said, "It's another great step in our progress toward liberty."

2766. Nevada silently approves gay rights law

by Steve Friess
Gay.com / PlanetOut.com Network

In a state where 67 percent of the electorate voted to ban same-sex marriage just seven months ago, Nevada legislators silently but unanimously passed a law this session that extends hospital visitation rights to partners of gays and other unmarried people.

The measure, effective on Tuesday, coasted through the legislative process this spring so quietly that even now that it has passed no one in the local media has written about it.

Under the new law, any Nevada adult can designate who can visit them in a medical facility regardless of legal family status. The law also permits individuals to decide who can take possession and decide the fate of their remains, catapulting the designee to the top of the priority list ahead of any blood relatives.

The measure emerged out of last fall's overwhelming approval of Question 2, which constitutionally defined marriage as being between a man and a woman. The religious conservatives who pushed the amendment insisted they weren't attacking gay people but merely hoping to protect heterosexual marriage, so two of the state's most influential political insiders put them to a test. Democratic strategist Billy Vassiliadis and Sig Rogich, a Republican former aide to President George H. W. Bush, challenged conservatives to support a bill providing hospital visitation and funeral rights for unmarried couples.

Vassiliadis directed a chief lieutenant, Dale Erquiaga, to draft the measure. Erquiaga, who is gay, enlisted the state's only openly gay legislator, Assemblyman David Parks, D-Las Vegas, to introduce it and worked with conservatives to settle on agreeable language. He also kept gay activists from testifying to keep from inflaming the process and attracting media attention.

"Everybody understood that this had to be about the very limited rights we wanted to gain," said Erquiaga, a vice president at Vassiliadis' advertising and public relations firm, R&R Partners. "We weren't trying to make political points and didn't want this to become a big political debate. We were just trying to do something for everyday folks."

Nonetheless, gay everyday folks like partners Stephanie Washington and Kerry Woods are thrilled. Woods was barred from being with Washington when Washington was in the emergency room with kidney stones in 1999, and Washington was kept out of the examination room in 2001 when Woods

broke her ankle.

"I knew that there had to be another way to (get marital rights after Question 2), even if we had to take this apart and go after it piece by piece," said Washington, 40, who is on the board of the pro-gay Equal Rights Nevada. "It's only the right thing to do."

Erquiaga and Parks were surprised the bill passed unanimously but credited their efforts to not make it gay-specific. Indeed, conservatives now explain their support as being intended to assist heterosexuals.

"I have constituents in (the elderly community of) Sun City who cohabitate without marriage because one or both would see their retirement income decrease if they married," explained GOP Assemblyman Bob Beers of Las Vegas via e-mail.

Few states offer such rights to same-sex or unmarried heterosexual partners, and those that do typically include it as part of a domestic partnership. Yet the fact that Nevada legislators approved this so soon after Question 2 passed shows the debate was effective even though gays lost in November, said Evan Wolfson, executive director of the national Freedom to Marry Coalition.

"This is further evidence that the debate over the freedom to marry moves the center in our direction even when we suffer a momentary loss," Wolfson said. "Talking about marriage claims for gay people the powerful and resonant vocabulary of love, family, commitment and care. We get non-gay people to understand the needs of our real-life families. It's why the right wing is so scared to death."

It may be just what it looks like - a modified BNC.
I've seen this kind of thing on test equipment, usually for signals that are
frequently connected/disconnected and where a positive lock isn't required.
It makes running test procedures a little easier.

:.shtml

As Baghdad boils, blackouts shut down air conditioning and anger
Iraqis

By Sameer N. Yacoub, Associated Press, 6/27/2003 16:15

BAGHDAD, Iraq

Sabotage against Baghdad's power grids has blacked out much of the
city for days on end, forcing residents to sleep on roofs, fan infants
and study by candlelight.

The electric outages are also fueling anti-U.S. sentiment at a time
occupation forces are seeking to quell a worsening insurgency that has
seen a sharp rise in attacks on American troops.

With temperatures reaching 117 degrees, life has been almost
unbearable.

''We have been living without electricity completely for the past
three days,'' said Siham Ibrahim, a 48-year-old woman who has been
sleeping with her family on the roof of their two-story house in
Baghdad.

''When the Americans removed Saddam, we expected that we would have a
better life, but things are getting worse.''

Coalition forces have struggled to re-establish basic services like
electricity and water since ousting Saddam Hussein's regime.

American officials have bristled at criticism that they aren't working
quickly enough.

The top U.S. official in Iraq, L. Paul Bremer, accused remnants of
Saddam's regime of sabotaging the power grids and promised to do
everything possible to fix the damage.

''They are trying to hinder the coalition's efforts to make life
better for the average Iraqi person... but we are not going to let
them succeed,'' he told reporters Wednesday.

An explosion Sunday rocked Iraq's largest gas pipeline near the town
of Hit, west of Baghdad, and several other attacks have followed.

The pipeline carries gas from Kirkuk to various parts of Iraq to fuel power stations, and the power situation in Baghdad has worsened since the attack.

A series of recent attacks on coalition troops has raised concern the United States could be confronting a guerrilla war in Iraq.

But many Iraqis say they blame the Americans for the problems.

''I do not believe that the Americans, with all their advanced technology, have not been able to solve the power problem in my country. I am angry with them,'' said Khalid Issa, a 36-year-old teacher.

He said his 12-year-old daughter has had difficulty studying for her exams because there is no light to read by.

The power failures have been a boon to Baghdad's growing legion of robbers, who have taken advantage of the outages to break into darkened apartments and steal cars from shadowy streets.

Perhaps the only other group that has welcomed the problems are those who sell generators.

The price of a small generator has risen to $1,100 from $600 a week ago, far too expensive for the average Iraqi.

At Baghdad's main power station, al-Dora, workers said the plant manager was too busy trying to fix the facility to speak to reporters.

The station, which supplies power to about half the city, has not been able to handle demand.

''There is a shutdown in the whole station, which is out of work now due to the overload,'' said a station employee, who refused to give his name.

Road Map in the Back Seat?

By Al Kamen

Friday, June 27, 2003; Page A27

Imagine our surprise Wednesday to read in the Israeli paper Haaretz (online), that Palestinian Authority Prime Minister Abu Mazen, meeting recently with militants to enlist their support for a truce with Israel, said that, when they met in Aqaba, President Bush had told him this:

" God told me to strike at al Qaeda and I struck them, and then he instructed me to strike at Saddam [Hussein], which I did, and now I am determined to solve the problem in the Middle East. If you help me I will act, and if not, the elections will come and I will have to focus on them."

So who needs to find WMD or a link with al Qaeda when the orders come from The Highest Authority?

Two calls to the White House for clarification went unreturned, but colleague Glenn Kessler did some digging.

The Haaretz reporter, Arnon Regular, read what the paper said were minutes of the Palestinians' meeting to Kessler and another colleague, who is an Arabic speaker.

The Arabic-speaking colleague's translation, was this:

"God inspired me to hit al Qaeda, and so I hit it. And I had the inspiration to hit Saddam, and so I hit him. Now I am determined to solve the Middle East problem if you help. Otherwise the elections will come and I will be wrapped up with them."

Even then, there's uncertainty.

After all, this is Abu Mazen's account in Arabic of what Bush said in English, written down by a note-taker in Arabic, then back into English.

But one thing seems consistent:

The election season is going to be a huge distraction from the Road Map, something the White House has always insisted would not be the

case.

2770. The Army Times blasts Bush and Republicans

Newsgroup: rec.radio.scanner

From The Army Times, 6/30/03 issue:
http://www.armytimes.com/story.php?f=0-ARMYPAPER-1954515.php

Editorial

Nothing but lip service

In recent months, President Bush and the Republican-controlled Congress have missed no opportunity to heap richly deserved praise on the military.

But talk is cheap -- and getting cheaper by the day, judging from the nickel-and-dime treatment the troops are getting lately.

For example, the White House griped that various pay-and-benefits incentives added to the 2004 defense budget by Congress are wasteful and unnecessary -- including a modest proposal to double the $6,000 gratuity paid to families of troops who die on active duty.

This comes at a time when Americans continue to die in Iraq at a rate of about one a day.

Similarly, the administration announced that on Oct. 1 it wants to roll back recent modest increases in monthly imminent-danger pay (from $225 to $150) and family-separation allowance (from $250 to $100) for troops getting shot at in combat zones.

Then there’s military tax relief -- or the lack thereof.

As Bush and Republican leaders in Congress preach the mantra of tax cuts, they can’t seem to find time to make progress on minor tax provisions that would be a boon to military homeowners, reservists who travel long distances for training and parents deployed to combat zones, among others.

Incredibly, one of those tax provisions -- easing residency rules for service members to qualify for capital-gains exemptions when selling a home -- has been a homeless orphan in the corridors of power for more than five years now.

The chintz even extends to basic pay.

While Bush’s proposed 2004 defense budget would continue higher targeted raises for some ranks, he also proposed capping raises for E-1s, E-2s and O-1s at 2 percent, well below the average raise of 4.1 percent.

The Senate version of the defense bill rejects that idea, and would provide minimum 3.7 percent raises for all and higher targeted hikes for some.

But the House version of the bill goes along with Bush, making this an issue still to be hashed out in upcoming negotiations.

All of which brings us to the latest indignity -- Bush’s $9.2 billion military construction request for 2004, which was set a full $1.5 billion below this year’s budget on the expectation that Congress, as has become tradition in recent years, would add funding as it drafted the construction appropriations bill.

But Bush’s tax cuts have left little elbow room in the 2004 federal budget that is taking shape, and the squeeze is on across the board.

The result:

Not only has the House Appropriations military construction panel accepted Bush’s proposed $1.5 billion cut, it voted to reduce construction spending by an additional $41 million next year.

Rep. David Obey, D-Wis., senior Democrat on the House Appropriations Committee, took a stab at restoring $1 billion of the $1.5 billion cut in Bush’s construction budget.

He proposed to cover that cost by trimming recent tax cuts for the roughly 200,000 Americans who earn more than $1 million a year.

Instead of a tax break of $88,300, they would receive $83,500.

The Republican majority on the construction appropriations panel quickly shot Obey down.

And so the outlook for making progress next year in tackling the huge backlog of work that needs to be done on crumbling military housing and other facilities is bleak at best.

Taken piecemeal, all these corner-cutting moves might be viewed as mere flesh wounds.

But even flesh wounds are fatal if you suffer enough of them.

It adds up to a troubling pattern that eventually will hurt morale -- especially if the current breakneck operations tempo also rolls on unchecked and the tense situations in Iraq and Afghanistan do not ease.

Rep. Chet Edwards, D-Texas, who notes that the House passed a resolution in March pledging "unequivocal support" to service members and their families, puts it this way:

"American military men and women don’t deserve to be saluted with our words and insulted by our actions."

Translation: Money talks -- and we all know what walks.

2771. Who's responsible for hiding the bogus Niger-uranium claims?

http://talkingpointsmemo.com/june0304.html#062503931pm>link

Let's assume for a moment that neither the president nor any of his top advisors knew that the Niger-uranium documents were bogus when the president delivered his State of the Union speech.

(Let's call it an extreme hypothetical.)

Let's say it was just a snafu.

If it's really true that folks at the State Department knew the story was bogus, and folks in the intelligence community knew it was bogus, and folks at the NSC were told it was bogus, and folks at the OVP were told it was bogus ...

If all those people knew, and somehow the information never got to the president or any of his top advisors, isn't that the kind of Category-5 screw-up that, almost by definition, costs a National Security Advisor her job?

If the president were given information to tell the public, even while many people in his own government knew the information was bogus -- and I think we now know that's true -- don't you figure he'd want some answers or explanations?

From someone?

House Rejects Deeper Probe on Iraqi Arms

By KEN GUGGENHEIM

WASHINGTON --

The House on Thursday rejected two attempts by Democratic lawmakers for additional inquiries into the handling of intelligence on Iraq's weapons programs.

Democrats sought to include the inquiries in a bill authorizing 2004 intelligence activities.

That bill, whose details are mostly classified, was expected to be approved late Thursday or early Friday.

Democrats have questioned whether prewar intelligence was inaccurate or manipulated to back up President Bush's push for war.

Republicans have said there is no sign of wrongdoing and have accused Democrats of raising the issue for political reasons.

2773. Wolfowitz Appointed Grand Inquisitor and Executioner

Wolfowitz Given Authority Over Terrorism Tribunals

Defense Secretary Donald H. Rumsfeld delegated to his top deputy, Paul D. Wolfowitz, the final word on which terrorism suspects are to be tried by a military tribunal.

Wolfowitz also was given the authority to decide who will serve on the tribunals, which the Pentagon calls commissions.

After President Bush determines which terrorism suspects in U.S. custody are subject to be tried under his Nov. 13, 2001, military order, a chief prosecutor would draft charges against any or all of those suspects.

It would then be for Wolfowitz to decide who would actually go to trial, according to Air Force Maj. John Smith of the Pentagon's Office of Military Commissions.

Wolfowitz becomes the heir-apparent to the throne of Heinrich Himmler.

Who in the Iraqi "state oil marketing firm" has the authority to
negotiate contracts in behalf of the Iraqi people??

Only the elected representatives of the Iraqi people have that
authority.
Can anyone name them?
==========
Iraq oil to sail to U.S.
ChevronTexaco gets contract for crude

For the first time since the U.S. war in Iraq ended, ChevronTexaco
Corp.
will load a tanker with crude oil from the nation's Persian Gulf port
of
Mina al-Bakr on Saturday.

The Iraqi oil will be sent to a refinery on the U.S. West Coast,
ChevronTexaco spokesman Andy Norman told Bloomberg News Tuesday. The
company bought 2 million barrels of Basrah light crude oil earlier this
month.

Iraqi oil was pumped onto a tanker at the Turkish Mediterranean port of
Ceyhan on Sunday, Iraq's first exports since the start of the U.S.-led
war in March.

Exports from Mina al-Bakr will begin Thursday, Thamir Ghadhban, the
U.S.-
appointed Ministry of Oil chief executive, told reporters.

Earlier this month, ChevronTexaco and five other companies won
contracts
for 10 million barrels of Iraqi crude, the first round of contracts
following the war.

The contracts, disclosed by Iraq's state oil marketing firm, could
generate around $300 million at current prices. The proceeds will go to
a
fund controlled by the United States and its allies and earmarked for
Iraq's reconstruction.

ChevronTexaco, headquartered in San Ramon, was the only U.S. company to
be awarded Iraqi oil. The other firms winning contracts were Tupras, in
Turkey; Total, of France; ENI, in Italy; and Repsol and Cepsa, both in
Spain.

Much of the oil being sold has been sitting in storage tanks in Iraq and
Turkey since before the war began. Arranging a sale has been problematic
because of questions of ownership, diplomacy and security.

Last month, the major roadblocks vanished when the United Nations
Security Council voted to lift the sanctions it had imposed on Iraq
following the Gulf War in 1991. Iraq's state oil marketing company --
overseen by U.S. administrators -- became the new steward for crude
sales.

Previously, the company had to funnel sales through the U.N. oil-for-food
program, which was implemented in 1995 to ensure that Iraq used the
proceeds to buy food and medicine, not weapons.

Iraq produced about 2.5 million barrels a day before the war, or about 3
percent of the world's oil supply. Iraq's oil industry, however, has been
severely wounded by the war and its aftermath. Looting and sabotage of
facilities have cut production to about 700,000 barrels of crude per day,
by some estimates.

MISSION ACCOMPLISHED?

From a St. Petersburg Times editorial, 6/26/03:
http://www.sptimes.com/2003/06/26/Opinion/Bush_s_illusions.shtml

Bush's illusions

Almost two months after the president said major combat in Iraq had ended, U.S. troops are still being killed and the White House's plans are in disarray.

On May 1, President Bush was the star of an elaborately staged event that may come to symbolize his administration's illusion-over-reality approach to the war in Iraq.

That evening, the president donned a flight suit, climbed aboard a Navy jet and flew to the deck of the USS Abraham Lincoln, which was kept adrift just off the coast of California so it could serve as a dramatic setting for a nationally televised spectacle.

The jet carrying the president made a screeching stop on the carrier, and the commander in chief emerged with all the strutting bravado of a Top Gun ace.

The president's handlers, who filmed the event for later use during the 2004 presidential campaign, set the camera angles so that the open Pacific, rather than the nearby San Diego skyline, served as the backdrop for the president's performance.

The event drew criticism from those who still find it unseemly for public officials to use matters of war for such brazen political gain.

Yet it was the substance of the president's speech, not just the heavy-handed symbolism of the surroundings, that looks most suspicious in retrospect.

"Major combat operations in Iraq have ended," the president, surrounded by thousands of Navy personnel under a banner proclaiming "Mission Accomplished," told the world that day.

Yet we now know that the president's assertion was, at best, premature.

Since the president declared that major combat had ceased, dozens of American and British soldiers have been killed or wounded in daily skirmishes.

If anything, Iraqis opposed to the continuing presence of U.S. troops have become more violent and better organized in recent weeks.

Those still loyal to Saddam Hussein have been emboldened by U.S. forces' failure to capture Hussein or account for his fate.

Even many Iraqis who were originally inclined to give U.S. and British authorities the benefit of the doubt have since turned against them.

If occupying forces don't quickly show more success in restoring order and rebuilding the Iraqi economy, we may lose any hope of building broad Iraqi support.

Thousands of undermanned U.S. troops - most of whom expected to come home once the president announced the war was effectively over - continue to perform admirably in Iraq.

But they have not received adequate support and guidance from their political leaders.

Few of our forces are trained for the peacemaking role that has been thrust upon them.

President Bush and his top advisers often have derided the notion of nation-building, the crucial but thankless task our forces are being asked to perform in Afghanistan and Iraq.

At the same time, the administration's doctrinaire unilateralism has rejected broader help from the United Nations and NATO, two organizations with valuable experience in such operations.

Yet the White House often seems more interested in denying problems than in solving them.

For example, the Army chief of staff, Gen. Eric Shinseki, was chastised by his political superiors, and eventually removed from his post, after he estimated early this year that 200,000 troops would be required to occupy Iraq in the months following the war.

That clear-eyed assessment conflicted with the White House's script for a quick, clean military victory.

Today, Shinseki's prediction looks optimistic.

Congress and the American people finally are beginning to raise serious questions about the credibility of the case the Bush administration made against Iraq in the weeks leading up to war.

At the very least, the president and other top officials grossly exaggerated the immediate threat posed by Hussein's regime.

Claims about Iraq's purported nuclear weapons program and links to al-Qaida were based on transparently phony documentation.

And while the search for chemical and biological weapons continues, it already is clear that the White House's specific claims about the

scope and location of those weapons have not been borne out.

A scrupulous investigation into charges that the Bush administration intentionally distorted intelligence to fit its political purposes in Iraq should continue.

Our government's credibility depends on it.

At the same time, though, Americans should be asking similar questions about the credibility of the Bush administration's ongoing postwar effort.

Even on its own terms, the White House has shown little of the patience, foresight and flexibility that will be required for the long-term job of building a peaceful, stable Iraq.

It is a far more complex task than the one the White House set for itself in Afghanistan, where the government of President Hamid Karzai and his U.S. protectors have made little progress in curbing the power of regional warlords, Taliban loyalists and other enemies of peace.

Wars cannot be neatly choreographed, and the end of combat operations cannot be precisely timed to fit the schedules of political consultants.

2776. Baghdad violence is becoming an embarrassment.

U.S. death toll rises in Iraq

By THOMAS E. RICKS
The Washington Post

WASHINGTON -

A wave of attacks on U.S. troops and civilian occupation forces in Iraq is raising worries that the 21-day war that ended in April was an incomplete victory.

The war defeated Saddam Hussein's military but apparently not his Baathist political party, some military experts say.

Neutralizing Baathist resistance is proving to be more difficult than the Pentagon calculated, and the continuing violence is becoming an embarrassment, said a U.S. official in Baghdad.

The attacks continued Thursday:

• A member of a U.S. special operations force was killed and eight were wounded by hostile fire southwest of Baghdad, the U.S. military said.

• A bomb exploded on the Baghdad airport road, killing a U.S. soldier and wounding another, the military said. The road -- heavily used by U.S. forces -- has been the scene of several attacks using trip wires dangling from overpasses or grenades tossed from bridges.

• Assailants threw grenades at a U.S. and Iraqi civilian convoy in west Baghdad, killing two Iraqi employees of the national electricity authority, U.S. soldiers and Iraqi police said. The convoy had U.S. Humvees at the front and the back, and two Iraqi civilian vehicles in the middle. The victims were traveling in the same car.

• Two U.S. soldiers were apparently abducted from an observation post north of Baghdad. American troops and helicopters scoured the desert for them Thursday.

The attacks came on top of Wednesday's mob violence that killed six British troops in southern Iraq, the Shiite-dominated area that until this week had been considered quiet and portrayed by Pentagon officials as a success story.

2778. QUEER MUSLIM CONFERENCE IN CANADA A SUCCESS

Newsgroup: rec.radio.scanner
Date: 2003-06-28 03:31:30 UTC
From: The REAL Agent Smith <biteme@here.con>
Message-ID: <f453850baeb61eab236c4d4bdc51ca73@remailer.frell.eu.org>
Source record: 29007
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.misc

June 27, 2003 - Salaam Canada and Al-Fatiha Foundation USA hailed the success of the 1st Salaam Canada and 4th Al-Fatiha International Conference, held in Toronto from June 20 - 22, 2003. More than 150 delegates came together for the three day event which was the first of its kind in Canada.

Lesbian, gay, bisexual, transgender Muslims and their allies gathered from all parts of Canada including Vancouver, Montreal, Quebec City, Ottawa, Halifax and Toronto. More than a dozen people also came from the United States and the United Kingdom. The theme of the conference was "Liberating Tradition, Celebrating Culture: A Festival of Faith, Heritage and Politics."

The conference featued a diverse array of programming including workshops and a night celebrating culture, art, film, dance and spoken word, featuring the talents of queer Muslims from across Canada. Conference delegates were particularly motivated and excited to be in Toronto, only days after Canada became the third country in the world to adopt same-gender marriages.

Highlights of the conference included a reception at the Toronto city hall, held on Friday evening, June 20th, hosted by Kyle Rae, an openly gay city councilmember. On Saturday evening, June 21st, a banquet dinner featuring a keynote speech by Svend Robinson, the first openly gay member of the Canadian parliament, attracted more than 200 people. The banquet dinner was attended by many members of the LGBT community as well as members of the progressive Muslim community in Toronto. Both Kyle Rae and Svend Robinson remarked on the diversity of Muslims in Canada and the opportunities for LGBT Muslims to build on the intersections of queer and Muslim politics in Canada and around the world.

The conference and the banquet dinner both began with a smudge ceremony, honoring the native and aboriginal people of Canada. Additionally, the conference held Sufi zikr (remembrance of God) and meditation sessions from three different Sufi traditions. All prayers were conducted in accordance with progressive Muslim ideology, where women and men line up side by side and both women and men have the opportunity to lead prayer.

Other featured speakers included Dr. Ghazala Anwar, a renowned theologian, Imam Abdullah, the world's first openly gay Imam (Muslim clergyman), Professor Scott Kugle, a scholar of Islamic jurisprudence and Islamic law and Rusmir Music, a scholar of gender and sexuality in Islam. John Fisher, outgoing director of EGALE (Equality for Gays and

Lesbians Everywhere), the national LGBT political organization in Canada, also spoke to the conference delegates about the history of the queer movement in Canada.

Conference workshop and session topics included:

New World Order
Towards a Liberating Theology
Healthy Sexuality and Wellness
Visions of a Progressive Mosque
Sharing the Spirit - The Sufi Way
The Role of Critical Thinking in Islam
Queer Organizing in Muslim Societies
History of the Queer Muslim Movement
Queer Muslim Identities Post September 11 Transexuality and Transgender Issues in Islam Queer Muslims in the Struggle for Social Justice Thematic and Contextual Readings of the Story of Lut Progressive Islam: the Queer Imperative for a Feminist Agenda Literary Representations of Gays and Lesbians in Muslim Cultures International Human Rights and Sexual Orientation / Gender Identity

The queer Muslim movement traces its history back to Toronto, where in 1992 an organization called Min Alaq (from a blood clot) was started for lesbian and gay Muslims. The organization later changed its name to Salaam, but disbanded in 1994 after threats were received from the wider non-queer Muslim community.

The 1st Salaam Canada and 4th Al-Fatiha International Conference was the seventh major conference held for lesbian, gay, bisexual, and transgender Muslims, since 1998, when Al-Fatiha, which led to the formation of Salaam Toronto and the Al- Fatiha Foundation USA, was formed. These conferences include:

1998 - 1st International Retreat - Boston 1999 - 1st North American Conference - New York City 2000 - 2nd International Retreat - London 2001 - 2nd North American Conference - San Francisco 2002 - 3rd International Retreat - Washington DC 2002 - 1st Al-Fatiha UK Conference - London

Al-Fatiha Foundation plans to hold two regional conferences in New York City in August 2003 and in Los Angeles in October 2003.

There are currently three queer Muslim groups in Canada. Salaam in Toronto, Salaam in Halifax, and Salaamat in Vancouver. Al-Fatiha has seven chapters in the United States in New York City, Washington DC, Atlanta, Houston, San Francisco, San Diego and Los Angeles. There are also four sister organizations outside of North America. Al-Fatiha UK in London, the Safra Project for lesbian, bisexual and transgender Muslim women in London, Gay Muslim Support Group in Johannesburg, South Africa, and Al-Fitrah Foundation in Capetown, South Africa.

Mission of Salaam Toronto:

Salaam Toronto is an organization dedicated to Muslims who are lesbian, gay, bisexual, and transsexual and/or transgender, as well as those questioning their sexual orientation or gender identity, and their friends. Salaam Torontos goal is to provide a safe space and a forum for LGBTQ Muslims to address issues of common concern, share individual experiences, and institutional resources. Salaam Toronto is dedicated to gender justice and the full participation of women in Salaam Toronto and in society at large. Salaam Toronto promotes the Islamic notions of social justice, peace, and tolerance through its work, to bring all closer to a world that is free from injustice, prejudice, discrimination, racism, misogyny, sexism and homophobia.

Mission of Al-Fatiha Foundation:

Al-Fatiha Foundation is dedicated to Muslims who are lesbian, gay, bisexual, transgender, intersex, questioning, those exploring their sexual orientation or gender identity, and their allies, families and friends. Al-Fatiha promotes the progressive Islamic notions of peace, equality and justice. We envision a world that is free from prejudice, injustice and discrimination, where all people are fully embraced and accepted into their faith, their families and their communities. Founded in 1998, Al- Fatiha Foundation is a registered US-based non-profit, non-governmental organization. Salaam Toronto and Al-Fatiha are members of an international grassroots network of organizations dedicated to Muslims who are lesbian, gay, bisexual, transgender, intersex, questioning, those exploring their sexual orientation or gender identity, and other sexual and gender minorities.

Where in the hell was the survey taken, "San Francisco" California.
If that is the case is would not surprise me.

"74%" of Americans would not approve of gays and lesbians.

Robert <bdi654$48c$1@nd.eastky.net>...
^ It's just a text file. What would be the _right_ sort of media?

That URI requires hypertext transfer protocol and Usenet does not. Perhaps I should have stated that it requires the wrong sort of connection and protocol instead of saying that it was the wrong sort of media.

I have a list of all frequencies used by the Business Radio Service but there are over 150 of them in three incompatible bands. I think the handheld radios are only using a small subset of the UHF frequencies. Just a guess. I was hoping someone here would know precisely which frequencies they use.

Frank

Bob Purcell <L4cLa.38713$Bg.27883@rwcrnsc54>...

^ Many people have little control over being eavesdropped upon anoymously by
^ scanner users ...

It isn't eavesdropping. Transmitting on a radio is little different than
speaking on a public address system to a large group of people. A PA system
has no privacy -- it was never intended to. Radios also were never intended
to have privacy.

Frank

And where do you live, Bumfuck, Tennessee? It's 2003 Pappy.

Where did you get your 74 percentage Pappy? Was this an informal survey taken by you in your trailer park? Is this a guess? What is it Pappy? Show some proof or STFU.

2795. Newsgroup flooder gets listed by NoCeM

Newsgroup: rec.radio.scanner
Date: 2003-06-28 13:36:20 UTC
From: Patrick C <Carter_P@ncvillage.net>
Message-ID: <062689090.531457FA34@ncvillage.net>
Source record: 29026
Cross-posted to: rec.radio.shortwave,rec.radio.scanner

The velveeta / spam killers have been issuing advisory messages which include the local floods. These notices can be (and are) used to squelch such posts at either a news server or a news reader, although path filtering with a newsreader such as Xnews is simpler.

For your information, one of the June 25th NoCeM notices is attached.

As you can see, the local child has been noticed and action is being taken.

-----BEGIN PGP SIGNED MESSAGE-----

This posting is an automatic NoCeM notice, listing articles that have been been crossposted to Usenet beyond reason.

This is determined as follows:

Let N be the number of groups in the Newsgroups: line.
Let F be the number of groups in the Followup-To: line.
For Followup-To: poster, use F=1.
If F=0 (no Followup-To: line), set F=N.

Now, if N+(F*F) > 30, then this is considered "beyond reason".

This allows, for example, threads crossposted to 5 groups, or FAQs that
set followups to poster or to a single group and are crossposted to no more than 29 groups.

It does not allow anything with followups set to more than 5 groups.

I have NOT issued cancellations for these articles. In fact, I have never cancelled any articles not written by me, and very rarely my own.
I can't speak for anybody else, of course.

For more information on NoCeM (either the protocol or the client
software) see http://www.cm.org

Guess they are a bit bummed out regarding that decision, no buts about that.

Some of those conservaties probably feel that they got the shaft.

But I am a bit bummed as to why this gay crap has to end up in a newsgroup
related to scanning. and radios.

Why all the fuss. That part of the anatomy is an exit, not an entrance.

Still covers a lot of users; here's 2003 Police Call, users in the
150 Mhz neighborhood:

Automotive Emergency Radio Service
Business Radio Service
Forest Products Radio Service
Manufacturer's Radio Service
Maritime VHF
Motor Carrier Radio Service (trucking companies, at 159.xxx)
Multi-Use Radio Service
Petroleum Radio Service
Power Radio Service
Special Industrial Radio Service
Taxicab Radio Service
Telephone Maintenance Radio Service
Video Production Radio Service

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

ROTFLMAO

You've got a good sense of humor Bob. <g>

Many of the draft dodgers have stayed here permanently.
For the most part we're glad they did, they make great
Canadians.
When they started showing up here, my father, who was in
the US Air Force in Korea said "good for them, they're the
smart ones". However, those that chose to go to Vietnam
certainly deserve respect also.

As for the queers..... we've already got lots thanks.

If only they would, what a better place the USA would be.

Try the following dealers:

Monitor Crystal Service

Ken's Electronics

G & G Communications

All three of these dealers have web sites which can easily be located by doing
a search on Google.

73,
David

Nice try agent shit aka Q, but anyone with more than three working brain cells (which is 2 more that you have) can see the flooding of the group with gay news is coming from http://80.65.224.85 (frog remailer) which is not where I post from. Do you get a kick out of forging ids? Are you and your butt buddy going to Canada to get married? Good, just make sure you stay there with the rest of the queers.
